

## Workshop 14 – 15 December 2017

### German – Polish Innovation Network

for sustainable economic/technological strengthening of the border region Spree-Neiße-Bober through need-based qualification and retention of professionals for the region.

The implementation of new key technologies in regional companies requires appropriately trained scientific staff.

#### Aim of workshop:

- Identification and implementation of representative technology demonstrators
- Mapping of company-specific characteristics and development trends

### Results

- Expansion of cross-border cooperation between the university of Zielona Góra and the BTU Cottbus – Senftenberg through the transfer of knowledge and competence in the field of mechanical engineering
- Compatibility of education in the field of modern engineering methods (CAD, computer infrastructure, communication structure)
- Empowering graduates to participate in internationally organized projects and consolidation of learned skills in engineering and technology
- Stimulating the local labor market through a skilled labor supply
