

GENERAL INFORMATION

For the fourth time, the annual event „Forensic Sciences and Engineering“ will be held for newcomers, alumni and teachers, active forensic scientists, external partners and friends of the program. Forensic Sciences and Engineering“ training is only outstanding if there is close and intensive contact between the participants from practice and science and research.

This year we are in Manduria, Apulia (Southern Italy) from 03.10. to 05.10.2019.

FORENSICS STILL IN MOTION

The last annual events 2016 in Lübbenau, 2017 in Lech am Arlberg in Austria and 2018 again in Lübbenau were a great success and showed the potential of the course „Forensic Sciences and Engineering“ of the BTU Cottbus-Senftenberg. The course is unique and requires our full attention and the ability to cooperate. The regular discussions and regulars' tables, the lecture series „Der Tat auf der Spur „2016, 2017“, the participation in the Night of Creative Minds 2017, 2018 were highlights on the main campus of the BTU not only for the study course. We are very happy to be able to organize an annual event again this year. At the event in Manduria we can expect cooperation partners, the alumni network and the Berufsverband Unabhängige Forensiker e.V. as well as international guests from science and practice. We are introducing a new conference format with which topics and discussion forums will be addressed in particular. The city of Manduria in Apulia is not only a summer resort but also a special place for organized crime. You will learn more about this in lectures and over a good glass of wine after a heated discussion and you will enjoy getting to know Forensic Sciences from the Italian side.
