The Brandenburg University of Technology Cottbus-Senftenberg (BTU) bundles top-level research and transfer at an international level, thereby creating an interdisciplinary innovation network and an excellent science and technology location. Together with its renowned partners, the BTU forms the Lausitz Science Network - an alliance of research institutions that together want to further develop the strengths of the science location Cottbus-Senftenberg and increase its visibility. Through innovative research and new teaching and learning formats, the BTU is shaping the future: with scientific findings and practice-relevant solutions, it is helping to shape the major issues of the future and transformation processes. In four profile lines - "Energy Transition and Decarbonization," "Health and Life Sciences," "Global Change and Transformation Processes," and "Artificial Intelligence and Sensor Technology" - it combines its strengths in teaching and research across institutes and faculties.

At its locations in Cottbus and Senftenberg, the BTU guarantees its students a challenging education, individual support and the opportunity to learn from and with each other with curiosity and openness. The BTU stands for an inspiring atmosphere of learning and research in a dialogical, democratic cooperation of all: The diversity of our faculty and students enables innovation and progress in Lusatia.

The Faculty of Environment and Natural Sciences invites applications for a

**JUNIOR PROFESSORSHIP (W1)**

**Microbiology (Mikrobiologie)**

with tenure track option to a W3 professorship, commencing at the earliest opportunity.

The professorship is intended to strengthen the Institute of Biotechnology. The Institute is in the process of restructuring and will continue to develop in the coming years with a focus on biomedicine with particular emphasis on sensory methods. Inter- and transdisciplinary collaboration with colleagues at the site and close cooperation with non-university research institutions such as the IZI-BB, the IHP, the IPMS and the IAP is desired.

We are especially interested in a candidate working in the fields of metabolic engineering and biosensor technology. On the one hand, metabolic properties of microorganisms (bacteria and/or fungi) are to be designed on the basis of genome-based research and thus new production strains are to be developed. On the other hand, microorganisms are to be modified in such a way that they can be used as sensors in the environment or medicine. Among other things, the newly developed microorganisms will be used to better understand microbial stress responses to external factors or to measure stress responses in other systems. At least one of the two research topics should be a previous research focus of the future holder of the position; one research topic can be developed within the tenure-track procedure. Within the overall concept of the Institute of Biotechnology at the Faculty of Environment and Natural Sciences, the professorship belongs to the Health and Life Sciences profile line and is located at the Senftenberg campus.

**We are looking for:**

- a nationally and internationally recognised personality with experience in the fields of microbiology - proven by relevant publications and third-party funding. The professorship should represent the above-mentioned fields in research and teaching in Biotechnology, Life Science and International Health degree programs and in other degree programmes at the BTU, as well as perform teaching duties in the Bachelor's and Master's degree programmes in German and English. If there is no sufficient knowledge of German, the willingness to learn the German language as soon as possible is required in order to ensure the cooperation in the management of the institute, the faculty and in university and non-university committees as well as the teaching of the Bachelor's degree programmes in German.

Your profile:

As a future junior professor, you can provide evidence of the following requirements in accordance with § 45 Para. 1 Brandenburg Higher Education Act (BbgHG):

- a completed university degree (microbiology, biology, biotechnology or similar),
- pedagogical aptitude and
- a special aptitude for academic work, as a rule through the excellent quality of a doctorate in microbiology, molecular biology or another relevant subject area.

Furthermore, you have experience in the acquisition of third-party funding and in the implementation of third-party funded projects. Your research topics should be relevant to the DFG or comparable international research funding institutions. Your university teaching experience enables excellent teaching for the subject area to be filled here. You have the ability to teach at all curricular levels from bachelor's to doctorate, to supervise theses and to support young academics. Your Knowledge and experience enable you to participate in academic self-administration and in raising the profile of the faculty.

We offer:

- fair and transparent appointment negotiations,
- attractive working conditions in a city with a high quality of life and in relative proximity to Berlin, Dresden and Leipzig,
- a dynamically developing research location,
- support in relocating to the immediate vicinity of your place of employment,
- comprehensive advice in the dual-career service and in the area of family orientation, and
- an attractive salary with a negotiable appointment benefit.

Other duties result from the requirements set by § 42 BbgHG in conjunction with § 3 BbgHG.

For further information please contact Prof. Dr. Klaus-Peter Stahmann, Tel. +49 (0)3573 85-913 / email: Klaus-Peter.Stahmann@b-tu.de.

The requirements and conditions for appointment are set out in §§ 45 and 46 BbgHG. According to § 45 Para. 2 BbgHG, the periods of full-time academic activity between the last examination performance of the doctorate and the application for a junior professorship may not exceed six years. These periods shall be extended to the extent of a reduction in working hours by at least one fifth of the regular working hours granted for the care or nursing of one or more children under the age of 18 or other relatives in need of care.

Persons who fulfil the requirements for a university professorship according to § 41 Para. 1 No. 4a BbgHG cannot be considered in this selection procedure.

According to § 46 BbgHG, junior professors are appointed as temporary civil servants for a period of up to four years. If the interim evaluation is positive, the appointment is to be extended to a maximum of six years. After successful probation during the six-year junior professorship, there is the option, within the framework of the tenure track, to transfer a professorship of grade W3 to the holder of the post after an appointment procedure has been carried out.

BTU is committed to equal opportunities and diversity and strives for a balanced gender ratio in all employee groups. Persons with a severe disability and their equals are given priority in the case of equal suitability.

As a family-oriented University, BTU offers a Dual Career Service.
