

**Modulhandbuch für den Studiengang Environmental and Resource Management
(universitäres Profil),
Master of Science, Prüfungsordnung 2021**
Inhaltsverzeichnis

Total Account

| | |
|---------------------|---|
| 11243 Master Thesis | 6 |
|---------------------|---|

Mandatory Modules

| | |
|--|----|
| 41421 Introduction to Environmental and Resource Management II | 8 |
| 41514 Study Project | 10 |

Compulsory Elective Modules

| | |
|---|----|
| 11225 Numerical Simulation: Free Surface and Groundwater Modelling | 12 |
| 11228 Modelling Process in Hydroengineering Projects | 14 |
| 11229 Information Management in Hydroinformatics Systems | 16 |
| 11284 Advanced Studies of International Environmental Law | 18 |
| 11463 Urban and Regional Planning | 22 |
| 11510 Hydrology & Hydraulics | 24 |
| 11591 Numerik in der Geotechnik | 26 |
| 11693 Ecological-Economic Modelling for Biodiversity Conservation | 28 |
| 12032 Statistics for Economic Analysis of Ecosystem Service Provision and Biodiversity Conservation | 30 |
| 12165 Renewable Energy Technologies for Power Supply | 32 |
| 12261 Ecological Excursion | 34 |
| 12826 Mathematical Data Science | 36 |
| 12942 Introduction to Climate Variability and Climate Change Projections | 38 |
| 12949 Geoecology | 40 |
| 12959 Geopedology | 43 |
| 12983 Climate Change and Migration | 45 |
| 12989 Process System Technology II | 47 |
| 13046 Microclimates | 48 |
| 13221 Land surface - Atmosphere Interactions | 50 |
| 13234 Communication of Science and Technology | 52 |
| 13249 Introduction to Gas Dynamics | 53 |
| 13251 Introduction to Computational Thinking and Programming for CFD | 54 |
| 13298 Basics for Freshwater Management | 56 |
| 13300 Environmental Data Science | 58 |
| 13515 Advanced Methods in Process, Energy and Systems Engineering | 60 |
| 13517 CFD Seminar | 62 |

| | | |
|-------|---|-----|
| 13580 | Systems and Process Hydrology | 64 |
| 13653 | Atmospheric Water | 66 |
| 13655 | Un/DisCIPLining Knowledge: Technology, Science, and Society in Transformation | 68 |
| 13657 | How to Talk about Nature? | 70 |
| 13663 | Environmental Soil Science and Plant Nutrition | 72 |
| 13664 | Soil Reclamation and Landscape Restoration | 74 |
| 13669 | Law and Policy for Agricultural Resource Management | 76 |
| 13705 | Sociology of Sustainable Development | 78 |
| 13706 | Justice and Diversity in Environmental Change | 79 |
| 13735 | Biodiversity of Terrestrial Invertebrates | 81 |
| 13737 | Practical Course Aquatic Ecology | 82 |
| 13796 | Just Energy Transition | 84 |
| 13822 | Biodiversity of Terrestrial Arthropods | 85 |
| 13831 | Process Simulation in Chemical and Process Engineering | 88 |
| 13832 | Optimisation in Process and Energy Systems Engineering | 90 |
| 13833 | Analysis and Modelling of Human-Environment Systems | 92 |
| 13837 | Agro-Ecosystems Analysis and Modelling | 94 |
| 13925 | Alternative Economies | 96 |
| 13955 | Geomorphology | 98 |
| 13957 | Behavioural Economics | 101 |
| 13958 | Economics of Innovation | 103 |
| 13959 | Law and Economics | 105 |
| 14069 | Biomass and Bioenergy | 107 |
| 14132 | Multidimensional Approaches for Technology Assessment | 109 |
| 14288 | Psychology of Entrepreneurship and Change | 112 |
| 14299 | Advances in Biogeochemistry and Pedology | 115 |
| 14341 | Contaminant Hydrology | 117 |
| 14355 | Hydrogeology | 119 |
| 14387 | Applied Limnology, Management and Modelling of Lakes and Reservoirs | 121 |
| 14462 | Lightweight and Active Structures | 123 |
| 14466 | Fit4Future Summer School | 125 |
| 14494 | The Political Economy of Transformation | 126 |
| 14496 | Applied Biostatistics for Environmental Data | 127 |
| 14506 | Advanced Geophysical Methods in Natural Resource Investigation (ANRI) | 129 |
| 14726 | Mathematical Optimization Techniques and Applications | 131 |
| 14824 | Automated biodiversity surveying tools and methods | 133 |
| 14827 | Forest Change Ecology and Research Fundamentals | 135 |
| 14828 | Isotopes in Environmental Science | 138 |
| 14872 | Design Science in Entrepreneurship and Management | 140 |

| | | |
|--|--|-----|
| 14874 | An Introduction to Basic Algorithms to Solve Environmental and Resource Management Optimization Problems | 143 |
| 14888 | Invasion Ecology | 145 |
| 41217 | General and Applied Ecology | 147 |
| 41404 | Strategic Environmental Assessment and Environmental Impact Assessment | 149 |
| 41405 | Cost-Benefit Analysis in Environmental Evaluation | 153 |
| 41406 | Environmental Modelling | 155 |
| 41422 | Measuring Sustainability | 158 |
| 41427 | Economics of Land Use and Biodiversity Conservation | 160 |
| 42417 | Methods of Water Resources Management | 162 |
| 42421 | Natural Resource Investigation | 164 |
| 42505 | Freshwater Restoration Ecology | 166 |
| 43406 | Municipal Solid Waste Management | 168 |
| 44107 | Safety- and Risk-Analysis for Process Plants | 170 |
| 44419 | Wastewater and Sludge Treatment | 172 |
| Modules with the Focus on Environmental Economics, Planning and Law | | |
| 11284 | Advanced Studies of International Environmental Law | 174 |
| 11463 | Urban and Regional Planning | 178 |
| 11693 | Ecological-Economic Modelling for Biodiversity Conservation | 180 |
| 12032 | Statistics for Economic Analysis of Ecosystem Service Provision and Biodiversity Conservation | 182 |
| 12983 | Climate Change and Migration | 184 |
| 13234 | Communication of Science and Technology | 186 |
| 13371 | ERM-Research-Module | 187 |
| 13655 | Un/Disciplining Knowledge: Technology, Science, and Society in Transformation | 189 |
| 13657 | How to Talk about Nature? | 191 |
| 13669 | Law and Policy for Agricultural Resource Management | 193 |
| 13705 | Sociology of Sustainable Development | 195 |
| 13706 | Justice and Diversity in Environmental Change | 196 |
| 13796 | Just Energy Transition | 198 |
| 13833 | Analysis and Modelling of Human-Environment Systems | 199 |
| 13925 | Alternative Economies | 201 |
| 13957 | Behavioural Economics | 203 |
| 13958 | Economics of Innovation | 205 |
| 13959 | Law and Economics | 207 |
| 14132 | Multidimensional Approaches for Technology Assessment | 209 |
| 14288 | Psychology of Entrepreneurship and Change | 212 |
| 14466 | Fit4Future Summer School | 215 |
| 14494 | The Political Economy of Transformation | 216 |
| 14726 | Mathematical Optimization Techniques and Applications | 217 |

| | | |
|---|--|-----|
| 14872 | Design Science in Entrepreneurship and Management | 219 |
| 14874 | An Introduction to Basic Algorithms to Solve Environmental and Resource Management Optimization Problems | 222 |
| 41404 | Strategic Environmental Assessment and Environmental Impact Assessment | 224 |
| 41405 | Cost-Benefit Analysis in Environmental Evaluation | 228 |
| 41422 | Measuring Sustainability | 230 |
| 41427 | Economics of Land Use and Biodiversity Conservation | 232 |
| 42417 | Methods of Water Resources Management | 234 |
| 43406 | Municipal Solid Waste Management | 236 |
| Modules with the Focus on Environmental Sciences | | |
| 12261 | Ecological Excursion | 238 |
| 12826 | Mathematical Data Science | 241 |

Module 11243 Master Thesis

assign to: Total Account

Study programme Environmental and Resource Management

| Degree | Module Number | Module Form |
|-------------------|---------------|-------------|
| Master of Science | 11243 | Mandatory |

| | |
|---|---|
| Modul Title | Master Thesis Master-Arbeit |
| Department | Faculty 2 - Environment and Natural Sciences |
| Responsible Staff Member | Prof. Dr. rer. nat. Beckmann, Michael |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | On special announcement |
| Credits | 30 |
| Learning Outcome | The Master Thesis is an examination in which the student must show that he or she can independently and successfully deal with an assignment within a set deadline and contribute scientifically founded theoretical and practical knowledge to the solving of a problem. The Master-thesis should correspond to the advanced knowledge base of the subject. The Master Thesis consists of written work and its defence. |
| Contents | The Master Thesis can be practical as well as theoretical. It should relate the advanced standard of knowledge in the scientific field. The Master thesis consists of the written work and its defence. |
| Recommended Prerequisites | none |
| Mandatory Prerequisites | Successful completion of the modules (except for students with UTP as home university): <ul style="list-style-type: none"> • 41514 Study Project • 41421 Introduction to Environmental and Resource Management II <p>Additionally for Examination and Study Regulation of 2021 (including Double Degree):</p> <ul style="list-style-type: none"> • an achievement of an overall minimum amount of 72 credit points. <p>Additionally for Examination and Study Regulation of 2011:</p> <ul style="list-style-type: none"> • an achievement of an overall minimum amount of 78 credit points. |
| Forms of Teaching and Proportion | Self organised studies - 900 hours |
| Teaching Materials and Literature | It depends on the individual subject. Corresponding material will be named and provided by the supervisor. |

| | |
|---|--|
| Module Examination | Continuous Assessment (MCA) |
| Assessment Mode for Module Examination | The grade of the Master thesis results from the thesis, which accounts for 75 percent, and its defense, which accounts for 25 percent. |
| Evaluation of Module Examination | Performance Verification – graded |
| Limited Number of Participants | none |
| Remarks | The academic supervisor is responsible for the topic and the content of the thesis. |
| Module Components | None |
| Components to be offered in the Current Semester | No assignment |

Module 41421 Introduction to Environmental and Resource Management II

assign to: Mandatory Modules

Study programme Environmental and Resource Management

| Degree | Module Number | Module Form |
|-------------------|---------------|-------------|
| Master of Science | 41421 | Mandatory |

| | |
|---|--|
| Modul Title | Introduction to Environmental and Resource Management II Einführung in den Studiengang Umwelt- und Ressourcenmanagement II |
| Department | Faculty 2 - Environment and Natural Sciences |
| Responsible Staff Member | Prof. Dr. rer. nat. Beckmann, Michael |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | Every winter semester |
| Credits | 6 |
| Learning Outcome | After attendance students will have a better understanding how the ERM master programme works, what distinguishes the specialization fields of ERM and how to find a topic for their master thesis. In addition they will be able to understand the basics of good scientific practice and have learned the foundation for conceptualizing, structuring and writing their master thesis. |
| Contents | <p>The module will be structured into two major topics:</p> <ol style="list-style-type: none"> 1. How to study the master programme of Environmental Resource Management at BTU 2. The basics of working scientifically at an European University. This part <u>may</u> include the following sub-topics: <ul style="list-style-type: none"> · Scientific writing (with a focus on master theses) · Working with scientific literature and publishing of scientific work · Presenting at scientific conferences and networking in the scientific community · Grant writing and funding proposals · Ethics and integrity in scientific work; Intellectual property and patents · Interdisciplinary collaboration · Science communication · Career paths in science <p>Due to a change in teaching personnel, changes to structure, timing and topics of the module will be made during the semester.</p> |
| Recommended Prerequisites | None |

| | |
|---|---|
| Mandatory Prerequisites | none |
| Forms of Teaching and Proportion | Lecture - 1 hours per week per semester Exercise - 1 hours per week per semester Self organised studies - 150 hours |
| Teaching Materials and Literature | to be announced |
| Module Examination | Final Module Examination (MAP) |
| Assessment Mode for Module Examination | Final module examination: 90 min |
| Evaluation of Module Examination | Performance Verification – graded |
| Limited Number of Participants | none |
| Remarks | None |
| Module Components | <ul style="list-style-type: none">• 240230 Lecture/Exercise Introduction to ERM II |
| Components to be offered in the Current Semester | No assignment |

Module 41514 Study Project

assign to: Mandatory Modules

Study programme Environmental and Resource Management

| Degree | Module Number | Module Form |
|-------------------|---------------|-------------|
| Master of Science | 41514 | Mandatory |

| | |
|---|---|
| Modul Title | Study Project Studienprojekt |
| Department | Faculty 2 - Environment and Natural Sciences |
| Responsible Staff Member | Prof. Dr. rer. nat. Beckmann, Michael |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | Every semester |
| Credits | 12 |
| Learning Outcome | Within a study project the students work in details on a selected topic of preferably interdisciplinary nature. The main scope is the development of problem-solving skills by means of information gathering as well as the application of theoretical knowledge acquired in more formal classes. Students will organize their scientific research related to data acquisition, data analysis. |
| Contents | A study includes a project report with all factual information about the work in the project. |
| Recommended Prerequisites | Depending on the project topic knowledge in mathematics/statistics and/or social as well as natural sciences is advantageous. |
| Mandatory Prerequisites | none |
| Forms of Teaching and Proportion | Consultation - 1 hours per week per semester Self organised studies - 345 hours |
| Teaching Materials and Literature | To be named by supervisor. |
| Module Examination | Continuous Assessment (MCA) |
| Assessment Mode for Module Examination | Written project report with all factual information about the work (as hard copy and digital form) and a presentation. <ul style="list-style-type: none"> • Written report, 20-30 pages (75%) • Presentation of results (25%) |
| Evaluation of Module Examination | Performance Verification – graded |

| | |
|---|--|
| Limited Number of Participants | none |
| Remarks | None |
| Module Components | • 240215 Study project Study Project |
| Components to be offered in the Current Semester | 240215 Study project Study Project |

Module 11225 Numerical Simulation: Free Surface and Groundwater Modelling

assign to: Compulsory Elective Modules

Study programme Environmental and Resource Management

| Degree | Module Number | Module Form |
|-------------------|---------------|---------------------|
| Master of Science | 11225 | Compulsory elective |

| | |
|---|--|
| Modul Title | Numerical Simulation: Free Surface and Groundwater Modelling Numerische Simulation: Gewässer- und Grundwassermodellierung |
| Department | Faculty 2 - Environment and Natural Sciences |
| Responsible Staff Member | Prof. PD Dr.-Ing. habil. Molkenthin, Frank |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | Every winter semester |
| Credits | 6 |
| Learning Outcome | Understanding of numerical simulation methods for free-surface and groundwater flow and related processes. |
| Contents | <ul style="list-style-type: none"> • Hydrological and hydrodynamic modelling of free surface flow in rivers, lakes and coastal waters and related numerical schemes (FD, FV, FE) • Numerical and computational aspects for FD, FE and FV schemes • Crucial effects of physics and its representation in simulation software • Calibration and validation of models • Simulation result analysis • Exercises in 1D/2D model comparison and 2D river modelling including flooding • Academic and real case studies from river modelling • Description of groundwater flow processes • Numerical modelling of groundwater flow in 1D, 2D and 3D and related numerical schemes (FD, FE, FV) • Finite element schemes for groundwater flow pollution transport, boundary conditions in 3D • Exercise: 3D groundwater modelling project • Project presentation and journal paper writing |
| Recommended Prerequisites | <ul style="list-style-type: none"> • Successful participation in module Hydrology & Hydraulics (11510 or 41414) with good result (ERM Module 11510 mark ≤ 2.3) • Advanced understanding of numerical methods, hydrological and hydrodynamic processes, computational hydraulics |

| | |
|---|--|
| | <ul style="list-style-type: none">• Advanced data management and analysis skills (e.g. spatial data, time series) using GIS and data analysis software / modelling environments (R, Python, Matlab, SQL, ...). |
| Mandatory Prerequisites | No successful participation in associated phase-out module 41505 <i>Coupling Free-Surface and Groundwater Modelling</i> . |
| Forms of Teaching and Proportion | Lecture - 2 hours per week per semester Exercise - 2 hours per week per semester Practical training - 4 hours per week per semester Self organised studies - 60 hours |
| Teaching Materials and Literature | none |
| Module Examination | Continuous Assessment (MCA) |
| Assessment Mode for Module Examination | <ul style="list-style-type: none">• two assignments (each 15%)• poster presentation and discussion (10%)• journal paper and discussion (10%)• final written (120 min) or oral (30-45 min) examination (50%) <p>The form in which the examinations will be carried out will be announced at the beginning of the course.</p> |
| Evaluation of Module Examination | Performance Verification – graded |
| Limited Number of Participants | none |
| Remarks | none |
| Module Components | <ul style="list-style-type: none">• 240636 Lecture/Exercise 2D Hydrodynamic numerical modelling• 240637 Lecture/Exercise Groundwater modelling |
| Components to be offered in the Current Semester | No assignment |

Module 11228 Modelling Process in Hydroengineering Projects

assign to: Compulsory Elective Modules

Study programme Environmental and Resource Management

| Degree | Module Number | Module Form |
|-------------------|---------------|---------------------|
| Master of Science | 11228 | Compulsory elective |

| | |
|---|---|
| Modul Title | Modelling Process in Hydroengineering Projects Computergestützter Modellierungsprozess in Ingenieurprojekten des Wasserwesens |
| Department | Faculty 2 - Environment and Natural Sciences |
| Responsible Staff Member | Prof. PD Dr.-Ing. habil. Molkenthin, Frank |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | Every winter semester |
| Credits | 6 |
| Learning Outcome | Understanding of modelling and information management methods in hydroengineering projects using simulation and data analysis tools. |
| Contents | <p>Modelling Process</p> <ul style="list-style-type: none"> • Modelling using hydroinformatics systems in hydroengineering projects • Physical understanding, data preparation • Model set-up, scenario definition, sensitivity analysis, result analysis • Application examples for real case studies (in combination with Module 11225) <p>Methods and approaches for assessing groundwater resources regarding quality and quantity with a focus on the regional scale (large river drainage basins). Main topics are:</p> <ul style="list-style-type: none"> • Characterisation of groundwater quality; statistical methods to assess natural and anthropogenically influenced conditions; groundwater protection; examples from current research • Balancing the water budget; components of the water balance, esp. groundwater recharge • Environmentally important mass fluxes in soil and groundwater (esp. nitrogen, phosphorus) • Modelling of water balance components and of mass fluxes; concepts, necessary data, validation, software; examples from current research |
| Recommended Prerequisites | <ul style="list-style-type: none"> • Successful participation in module Hydrology & Hydraulics (11510 or 41414) with good result |

| | |
|---|--|
| | (ERM Module 11510 mark ≤ 2.3) |
| | <ul style="list-style-type: none"> • Advanced understanding of computer based water related modelling techniques (data and processes), numerical methods (FDM, FEM, FVM), GIS and time series analysis. • Experiences in use of numerical simulation tools (esp. for 1D and 2D hydraulic modelling) • Hydroengineering knowlegde and skills |
| Mandatory Prerequisites | <p>No successful participation in associated phase-out modules:</p> <ul style="list-style-type: none"> • <i>41506 Modelling Business Processes, Workflow and Information Management</i> OR • <i>41507 Geometric Modelling and Presentation Methods.</i> |
| Forms of Teaching and Proportion | <p>Lecture - 3 hours per week per semester Seminar - 4 hours per week per semester Practical training - 1 hours per week per semester Self organised studies - 60 hours</p> |
| Teaching Materials and Literature | <p>The current teaching materials including literature references are made available to students via the respective current websites (e.g. EuroAquae server, Moodle, Google site, HydroEurope server) for the current courses.</p> |
| Module Examination | <p>Continuous Assessment (MCA)</p> |
| Assessment Mode for Module Examination | <ul style="list-style-type: none"> • Assignments (30%) • Project reports (30%) • Seminar presentations and discussions (40%) <p>The details and weighting of the different assessment elements are determined in the first lectures.</p> |
| Evaluation of Module Examination | <p>Performance Verification – graded</p> |
| Limited Number of Participants | <p>none</p> |
| Remarks | <p>none</p> |
| Module Components | <ul style="list-style-type: none"> • 240640 Seminar Flood management • 240641 Seminar Groundwater management • 240639 Lecture/Practical training Modelling in Hydroengineering • 248234 Lecture/Seminar Hydrogeology of large catchments |
| Components to be offered in the Current Semester | <p>No assignment</p> |

Module 11229 Information Management in Hydroinformatics Systems

assign to: Compulsory Elective Modules

Study programme Environmental and Resource Management

| Degree | Module Number | Module Form |
|-------------------|---------------|---------------------|
| Master of Science | 11229 | Compulsory elective |

| | |
|---|---|
| Modul Title | Information Management in Hydroinformatics Systems Informationsmanagement in Systemen der Hydroinformatik |
| Department | Faculty 2 - Environment and Natural Sciences |
| Responsible Staff Member | Prof. PD Dr.-Ing. habil. Molkenthin, Frank |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | Every winter semester |
| Credits | 6 |
| Learning Outcome | Skills and abilities for Hydroinformatics system design and development; Understanding of information management, data analysis and Web-technology in hydroinformatics systems |
| Contents | information modelling techniques, components of numerical models, numerical model design for hydrodynamic simulation, interfaces to software modules, implementation and application examples, information analysis and mining, Web-Technologies for hydroinformatics systems, application of Web-Technologies in hydroinformatics systems, application of R /Python/... in hydroinformatics |
| Recommended Prerequisites | <ul style="list-style-type: none"> • Successful participation in module Hydrology & Hydraulics (11510 or 41414) with good result (ERM Module 11510 mark ≤ 2.3) • Advanced programming and software development skills • Understanding of data bases, numerical methods, data analysis and visualisation, GIS • Experiences in Web-technology, XML-Schemes and software interfacing for water related applications |
| Mandatory Prerequisites | No successful participation in associated phase-out module <i>41508 Monitoring, Data Acquisition and Documentation</i> . |
| Forms of Teaching and Proportion | Lecture - 2 hours per week per semester Exercise - 2 hours per week per semester Practical training - 2 hours per week per semester Self organised studies - 90 hours |

| | |
|---|--|
| Teaching Materials and Literature | none |
| Module Examination | Continuous Assessment (MCA) |
| Assessment Mode for Module Examination | <ul style="list-style-type: none">• Exercises/assignments (50%)• Written (120 min) or oral (30-45 min) examination (50%) <p>The details and weighting of the different assessment elements are determined in the first lectures.</p> |
| Evaluation of Module Examination | Performance Verification – graded |
| Limited Number of Participants | none |
| Remarks | none |
| Module Components | <ul style="list-style-type: none">• 240638 Lecture Hydroinformatics Systems design and development• 240643 Exercise Information handling (field, laboratory, simulation)• 240645 Practical training Web-based hydroinformatics systems |
| Components to be offered in the Current Semester | No assignment |

Module 11284 Advanced Studies of International Environmental Law

assign to: Compulsory Elective Modules

Study programme Environmental and Resource Management

| Degree | Module Number | Module Form |
|-------------------|---------------|---------------------|
| Master of Science | 11284 | Compulsory elective |

| | |
|---|--|
| Modul Title | Advanced Studies of International Environmental Law Internationales Umweltrecht für Fortgeschrittene |
| Department | Faculty 5 - Business, Law and Social Sciences |
| Responsible Staff Member | Prof. Dr. jur. Albrecht, Eike |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | Every summer semester |
| Credits | 6 |
| Learning Outcome | <p>After completing the module, students should be able to:</p> <ul style="list-style-type: none"> • Understand international environmental law and its role in the management of global environmental problems, • Identify and critically analyse issues pertaining to international environmental disputes, • Apply international environmental law in specific concrete cases, • Comprehend and evaluate the significance of international environmental law in protecting the environment and fostering international relations. <p>After completing the seminar, students will:</p> <ul style="list-style-type: none"> • Understand the way in which international agreements are achieved, • Understand the role various international actors play in decision making, • Have an understanding of the relevant actors who contribute to the outcome of international agreements, • Be able to make clear and convincing statements (orally and in written form), • Understand international decision-making procedures after playing an active role in a (simulated) negotiation process, • Have improved their skills in effectively arguing their case in relation to the topics discussed in class. |
| Contents | <p>Lecture: Advanced Studies of International Environmental Law</p> <ul style="list-style-type: none"> • Introduction to international law and international environmental law • Creation and development of international environmental law |

- Implementation and enforcement strategies of international environmental agreements
- International environmental agreements with respect to the following topics:
 - Biodiversity (Biodiversity Convention/CITES/WHC).
 - Marine environment (Convention on the Law of the Sea)
 - Climate change (Climate Change Convention/Kyoto Protocol/Paris Agreement)
 - Ozone depletion (Convention for Protecting Ozone Layer/Montreal Protocol)
 - Toxic/hazardous substances (Basel Convention on Hazardous Waste)
 - Citizens rights to information, public participation and access to Justice

Seminar: International Negotiations and Environmental Decision-Making

- Challenges of international negotiations with a focus on climate change
- Actors of global environmental governance and international environmental decision-making
- State participation in global environmental governance
- The role of non-state actors in environmental decision-making and negotiations
- Simulation (role play) of an international conference (2 groups with maximum 35 students)

At the beginning of the semester, the students will be prepared to participate in a simulation of a multilateral negotiation process. (Climate Conference Simulation Groups). Each student in the simulation group will take the role of a relevant international player such as a country, an NGO, the private sector, or a subsidiary body. Participants will be required to prepare (in written and oral form) an assigned country/organisation engaged in the international environmental negotiation process to actively participate in the final role-play.

Recommended Prerequisites

Knowledge of the content of module:

- 41201 *International Environmental Law*

Mandatory Prerequisites

none

Forms of Teaching and Proportion

Lecture - 2 hours per week per semester
Seminar - 2 hours per week per semester
Self organised studies - 120 hours

Teaching Materials and Literature

- Birnie/Boyle/Redgwell, *International Law and the Environment*, 4th edition, Oxford University Press, 2021

- IPCC, 2022: Summary for Policymakers. In: Climate Change 2022: Mitigation of Climate Change. Contribution of Working Group III to the Sixth Assessment Report of the Intergovernmental Panel on Climate Change [P.R. Shukla, J. Skea, R. Slade, A. Al Khourdajie, R. van Diemen, D. McCollum, M. Pathak, S. Some, P. Vyas, R. Fradera, M. Belkacemi, A. Hasija, G. Lisboa, S. Luz, J. Malley, (eds.)]. Cambridge University Press, Cambridge, UK and New York, NY, USA. doi: 10.1017/9781009157926.001.
- IPCC, 2018: Summary for Policymakers. In: Global Warming of 1.5°C. An IPCC Special Report on the impacts of global warming of 1.5°C above pre-industrial levels and related global greenhouse gas emission pathways, in the context of strengthening the global response to the threat of climate change, sustainable development, and efforts to eradicate poverty [Masson-Delmotte, V., P. Zhai, H.-O. Pörtner, D. Roberts, J. Skea, P.R. Shukla, A. Pirani, W. Moufouma-Okia, C. Péan, R. Pidcock, S. Connors, J.B.R. Matthews, Y. Chen, X. Zhou, M.I. Gomis, E. Lonnoy, T. Maycock, M. Tignor, and T. Waterfield (eds.)]. Cambridge University Press, Cambridge, UK and New York, NY, USA, pp. 3-24 <https://doi.org/10.1017/9781009157940.001>.

Additional literature will be announced in class and made available on the Moodle page of the course.

Module Examination

Continuous Assessment (MCA)

Assessment Mode for Module Examination

- **Written Exam, 120 minutes** (maximum 40 points)

And

Climate Conference Simulation Group:

- Paper for preparation of the climate conference, 2 pages (maximum 15 points)
- Simulation of a climate conference, 10 SWS (maximum 25 points)

or

Weekly seminars Group:

- 10 pages essay submission on topics related to environmental negotiations and decision-making (maximum 40 points)

To pass (grade 4,0) the module, students need to earn a minimum of 40 points.

Evaluation of Module Examination

Performance Verification – graded

Limited Number of Participants

none

Remarks

none

Module Components

- Lecture: Advanced Studies in International Environmental Law
- Seminar: International Negotiations and Environmental Decision-Making (including COTTCOP blocked seminars)

**Components to be offered in the
Current Semester**

- Examination: Advanced Studies in International Environmental Law

520211 Lecture

Advanced Studies of International Environmental Law - 2 Hours per Term

520219 Seminar

International Negotiations and Environmental Decision-Making - 2 Hours per Term

520216 Examination

Advanced Studies of International Environmental Law - 2 Hours per Term

Module 11463 Urban and Regional Planning

assign to: Compulsory Elective Modules

Study programme Environmental and Resource Management

| Degree | Module Number | Module Form |
|-------------------|---------------|---------------------|
| Master of Science | 11463 | Compulsory elective |

| | |
|---|--|
| Modul Title | Urban and Regional Planning Stadt- und Regionalplanung |
| Department | Faculty 6 - Architecture, Civil Engineering and Urban Planning |
| Responsible Staff Member | Prof. Dr. phil. Gribat, Nina |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | Every summer semester |
| Credits | 6 |
| Learning Outcome | This module will allow students: <ul style="list-style-type: none"> • to understand the main strategic concepts, analytical methods and planning tools required in urban and regional planning • to analyse urban structures and functions • to understand the concept of historic urban landscapes • to identify the factors influencing urban change • to understand the impact of urban development on heritage sites and local communities • to develop urban strategies for the protection and valorisation of archaeological heritage. |
| Contents | The module will focus on the following contents: <ul style="list-style-type: none"> • main concepts and approaches to urban and regional planning • identification of the urban/regional profile (environmental, physical, social, demographic, economic, cultural setting) • stakeholder analysis and participatory approaches to urban and regional planning • historic urban landscape approach • urban and regional planning tools and methodologies • urban change and trends in urban development • impact of urban development on heritage sites • models for successful integration of archaeological sites in urban and regional plans. |
| Recommended Prerequisites | none |

| | |
|---|--|
| Mandatory Prerequisites | none |
| Forms of Teaching and Proportion | Lecture - 2 hours per week per semester Seminar - 2 hours per week per semester Self organised studies - 120 hours |
| Teaching Materials and Literature | The bibliography will be presented in class. |
| Module Examination | Continuous Assessment (MCA) |
| Assessment Mode for Module Examination | <ul style="list-style-type: none">• active participation (20%)assignment 1: oral presentation 15 minutes (30%)assignment 2: oral presentation 25 minutes plus written abstract of 500 words (50%) |
| Evaluation of Module Examination | Performance Verification – graded |
| Limited Number of Participants | none |
| Remarks | Module Code: HCSM - 213 In the event that the module cannot be taught or tested according to the present description (e.g. for reasons of infection protection), the alternatives communicated on relevant platforms (e.g. homepage or Moodle) apply. |

Module 11510 Hydrology & Hydraulics

assign to: Compulsory Elective Modules

Study programme Environmental and Resource Management

| Degree | Module Number | Module Form |
|-------------------|---------------|---------------------|
| Master of Science | 11510 | Compulsory elective |

| | |
|---|--|
| Modul Title | Hydrology & Hydraulics Hydrologie & Hydraulik |
| Department | Faculty 2 - Environment and Natural Sciences |
| Responsible Staff Member | Prof. PD Dr.-Ing. habil. Molkenthin, Frank |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | Every summer semester |
| Credits | 6 |
| Learning Outcome | Understanding the typical modelling processes in hydrology & hydraulics such as GIS based catchment analysis, rainfall/runoff analysis, open channel hydraulics and hydrodynamic analysis of rivers. Practical experiences in application of related software tools. Basic ability to evaluate and present modelling results in respect to theoretical background, model assumptions and limits as well as uncertainties in data. |
| Contents | The module has four main parts. First part deals with the DEM based topographic analysis of a catchment as pre-processing for a hydrological analysis including catchment delinieation, rainfall interpolation, land-use and soil data analysis using GIS for a given case study. Second part deals with the hydrological rainfall/runoff analysis using different analysis methods. The lectures present the theoretical background of the analysis methods and their application in projects. Students will perform a EXCEL/Hec-HMS/Shetran based assignment for a given case study. Third part of the module deals with open channel hydraulics. The lecture presents the theoretical background including engineering assumptions and simplifications. Application examples with manual calculations in comparison to computer-based simulations are introduced and used for training. Fourth part of the module covers computer-based hydrodynamic simulation of river networks for flood management. The lectures present the theoretical background of the hydrodynamic simulation methods (basic differential equations, numerical methods, physical parameters, handling of structures such as weirs, calibration, validation, simulation |

scenarios ...) and their application in projects. Students will perform a software-based assignment for a given case study. All assignments deal with the same case study data set and demonstrate the integrated application of different software tools within a project. Finally, the lectures will give an outlook for 2D flood modelling and related flood risk management.

| | |
|---|---|
| Recommended Prerequisites | Advanced knowledge in mathematics/numerics, physics, fluid mechanics, GIS, ICT and water resource management on master level, experiences in computer based modelling, data management and data analysis |
| Mandatory Prerequisites | none |
| Forms of Teaching and Proportion | Lecture - 3 hours per week per semester Practical training - 3 hours per week per semester Self organised studies - 90 hours |
| Teaching Materials and Literature | Teaching material and a list of recommended literature will be published on the Web page / in Moodle, links will be provided to the participants during the lectures. |
| Module Examination | Continuous Assessment (MCA) |
| Assessment Mode for Module Examination | 1) Four assignments during the semester (each 10% -> four assignments 40%) 2) Written exam (60%) The written exam will be offered two times during the semester (e.g. last week of lecture period and mid of September). Participants can participate in both written exams, in this case the mean value of the two results will be considered as written result for the final mark. To pass the module, participants needs at least 50% summing up the results from the assignments (max. 40%) and from the written exam(s) (max. 60%). |
| Evaluation of Module Examination | Performance Verification – graded |
| Limited Number of Participants | none |
| Remarks | This module is for ERM Master study programme. |
| Module Components | <ul style="list-style-type: none"> • 240608 Lecture Hydrology & Hydraulics • 240610 Practical training Hydrology & Hydraulics • 240621 Examination Hydrology & Hydraulics (1st written exam) • 240654 Examination Hydrology & Hydraulics (2nd written exam) |
| Components to be offered in the Current Semester | <p>240608 Lecture Hydrology & Hydraulics - 3 Hours per Term</p> <p>240610 Practical training Hydrology & Hydraulics - 3 Hours per Term</p> <p>240621 Examination Hydrology & Hydraulics</p> <p>240654 Examination Hydrology & Hydraulics</p> |

Modul 11591 Numerik in der Geotechnik

zugeordnet zu: Compulsory Elective Modules

Studiengang Environmental and Resource Management

| Akademischer Grad | Modulnummer | Modulform |
|-------------------|-------------|-------------|
| Master of Science | 11591 | Wahlpflicht |

| | |
|-------------------------------------|--|
| Modultitel | Numerik in der Geotechnik Numerics in Geotechnics |
| Einrichtung | Fakultät 6 - Architektur, Bauingenieurwesen und Stadtplanung |
| Verantwortlich | Prof. Dr.-Ing. Grandas Tavera, Carlos |
| Lehr- und Prüfungssprache | Deutsch |
| Dauer | 1 Semester |
| Angebotsturnus | jedes Sommersemester |
| Leistungspunkte | 6 |
| Lernziele | Nach Abschluss des Moduls kennen die Studierenden numerische Methoden zur Lösung der typischen Differentialgleichungen in der Geotechnik. Sie sind in der Lage, die Modellierung üblicher geomechanischen Randwertprobleme mit der Methode der Finiten Differenzen und der Methode der Finiten Elementen nachzuvollziehen und ihre Lösung kritisch zu bewerten. Sie können geeignete Stoffgesetze für die numerische Berechnung begründet auswählen und ihren Einfluss auf die Ergebnisse einschätzen. |
| Inhalte | Nachfolgende Inhalte werden themenbezogen vermittelt: <ul style="list-style-type: none"> • Anfangs- und Randwertprobleme in der Bodenmechanik • Finite Differenzen: Zeitintegration, numerische Stabilität, Beispiele • Finite Elemente: schwache Form, Diskretisierung, Randbedingungen, numerische Lösung • Locking, reduzierte Integration, Hour-Glass-Modes • Einführung in die zeitliche Integration von Stoffgesetze: Return-Mapping, explizite und semi-explizite Methode • Einführung in die Diskrete Elemente Methode |
| Empfohlene Voraussetzungen | Grundkenntnisse in Mechanik, Grundbau und Bodenmechanik. |
| Zwingende Voraussetzungen | keine |
| Lehrformen und Arbeitsumfang | Vorlesung - 2 SWS Übung - 2 SWS Selbststudium - 120 Stunden |

| | |

Module 12165 Renewable Energy Technologies for Power Supply

assign to: Compulsory Elective Modules

Study programme Environmental and Resource Management

| Degree | Module Number | Module Form |
|-------------------|---------------|---------------------|
| Master of Science | 12165 | Compulsory elective |

| | |
|---|--|
| Modul Title | Renewable Energy Technologies for Power Supply Energieerzeugung auf Basis erneuerbarer Energien |
| Department | Faculty 3 - Mechanical Engineering, Electrical and Energy Systems |
| Responsible Staff Member | Prof. Dr. rer. nat. Röntzsch, Lars |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | Every winter semester |
| Credits | 6 |
| Learning Outcome | The participants of the module acquire advanced knowledge in the design, operation, and application of renewable energy systems, including solar energy (solar thermal and photovoltaics), wind energy, hydroelectric power, geothermal energy (both near-surface and deep), biomass, and energy storage technologies, with a focus on hydrogen technology. They can analyze and reflect on the interactions between these subfields, considering their technical and ecological implications, and are capable of making scientifically grounded judgments within the discipline. The participants of the module develop the ability to formulate their own research questions and address them using appropriate scientific methods. They can effectively engage in domain-specific and interdisciplinary discussions, presenting complex topics clearly and persuasively to diverse audiences. Additionally, they demonstrate the ability to independently acquire new knowledge and apply it to solve and critically evaluate application- or research-oriented challenges. |
| Contents | Design, operation and use of: <ul style="list-style-type: none"> • Solar energy (photovoltaics, solar thermal) • Wind energy • Geothermal energy (deep and near-surface) • Biomass • Hydroelectric power • Energy storage inclusive hydrogen technology |
| Recommended Prerequisites | <ul style="list-style-type: none"> • A completed bachelor's degree in a relevant field such as engineering, environmental technology, energy and process engineering, or related disciplines. |

| | |
|---|--|
| | <ul style="list-style-type: none">• Profound knowledge and understanding of technology, physics, chemistry, and mathematics. |

Module 12261 Ecological Excursion

assign to: Compulsory Elective Modules

Study programme Environmental and Resource Management

| Degree | Module Number | Module Form |
|-------------------|---------------|---------------------|
| Master of Science | 12261 | Compulsory elective |

| | |
|---|---|
| Modul Title | Ecological Excursion Ökologische Exkursion |
| Department | Faculty 2 - Environment and Natural Sciences |
| Responsible Staff Member | Prof. Dr. rer. nat. Birkhofer, Klaus |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | Every winter semester |
| Credits | 12 |
| Learning Outcome | <p>The Ecological Excursion module provides hands-on experience of biodiversity threats and conflicts and basic ecological adaptations to dryland conditions.</p> <p>Part "Ecological Excursion: Seminar" The seminar introduces students to the main components of terrestrial dryland ecosystems and provides a forum for discussion of topics relevant to the field trip. Students will learn about:</p> <ul style="list-style-type: none"> • biodiversity crisis and threats • human-wildlife conflicts • German colonial history • competent use of English <p>Part "Ecological Excursion: Excursion" The Ecological Excursions provide a hands-on experience that combines elements of scientific expeditions, teamwork projects and taxonomic identification of organisms. Students will learn about:</p> <ul style="list-style-type: none"> • independent and team-oriented ecological project work • adaptations of animals and plants to local conditions • poverty alleviation and food security • geological and hydrological conditions and processes • ecological concepts such as food webs, species inventories, sampling theory |
| Contents | <p>Part "Ecological Excursion: Seminar"</p> <ul style="list-style-type: none"> • Fauna and Flora (plants, vertebrates, invertebrates) • contemporary ecological challenges (biodiversity conservation, climate change, invasive species, ecosystem services) |

- contemporary social challenges (human wildlife conflicts, poaching, food security, colonial history)

The seminar classes are organised as 8 double blocks of lectures by the lecturer and seminar presentations by the students during the semester. Lectures will be complemented by discussions and individual contributions from students. Self-organised work is required, in particular the preparation of seminar presentations and the acquisition of previously discussed content for the field trip.

Part "Ecological Excursion: Excursion"

- study design and hypothesis testing
- multidisciplinary teamwork
- communication skills

The field trip will last up to 16 days.

| | |
|---|--|
| Recommended Prerequisites | none |
| Mandatory Prerequisites | none |
| Forms of Teaching and Proportion | Lecture - 1 hours per week per semester Seminar - 2 hours per week per semester Excursion - 10 hours per week per semester Self organised studies - 165 hours |
| Teaching Materials and Literature | Relevant literature and equipment needed during the field trip will be provided to the participants. |
| Module Examination | Continuous Assessment (MCA) |
| Assessment Mode for Module Examination | Part "Ecological Excursion: Seminar" One oral presentation, 15 min followed by discussion (50%) Part "Ecological Excursion: Excursion" An individual log of a pre-assigned field day (25%) and a species list of a pre-assigned taxonomic group after the field day (25%, one list for every two students participating). |
| Evaluation of Module Examination | Performance Verification – graded |
| Limited Number of Participants | 18 |
| Remarks | The excursion to Namibia is associated with costs for participants (around 2.500 €). In previous years, stipends were available for qualified students to reduce the costs. PLEASE NOTE: The module can only be offered with a minimum number of 8 participants! If fewer than 8 participants register for the module, the module must be cancelled. |
| Module Components | <ul style="list-style-type: none"> • 240708 Lecture/Seminar Ecological Excursion: Seminar • 240709 Excursion Ecological Excursion: Excursion |
| Components to be offered in the Current Semester | No assignment |

Module 12942 Introduction to Climate Variability and Climate Change Projections

assign to: Compulsory Elective Modules

Study programme Environmental and Resource Management

| Degree | Module Number | Module Form |
|-------------------|---------------|---------------------|
| Master of Science | 12942 | Compulsory elective |

| | |
|---|--|
| Modul Title | Introduction to Climate Variability and Climate Change Projections Einführung in Klimavariabilität und Klimaänderungsprojektionen |
| Department | Faculty 2 - Environment and Natural Sciences |
| Responsible Staff Member | Dr. rer. nat. Will, Andreas |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | Every winter semester |
| Credits | 6 |
| Learning Outcome | The students shall be made familiar with natural climate variability and the expected climate change in selected regions. They shall be enabled to understand and to use the results of Climate System Models. In this way a sound basis for climate impact assessment in different regions will be provided. |
| Contents | <p>Part Lecture:</p> <ol style="list-style-type: none"> 1. Climate state and climate variables 2. Physical basis of <ul style="list-style-type: none"> • 1. climate system dynamics • 2. anthropogenic climate change 3. Observational evidence of anthropogenic climate change 4. Design and history of climate system models <ul style="list-style-type: none"> • 1. Global Climate System Models • 2. Regional Climate System Models • 3. Statistical Climate Change Signal Models 5. Evaluation of climate system models 6. Emission Scenarios and Climate Change Projections 7. Climate Change Signal Assessment <ul style="list-style-type: none"> • 1. Climate Change Signal in selected regions • 2. Uncertainties of Climate Change Signals • 3. Climate sensitivity • 4. Reliability of climate projections 8. Climate System Model bias correction and Climate impact modelling |

| | |
|---|---|
| | <p>Part Exercise: Exercises supporting the understanding of the lectures and the ability to use Climate System Model results are introduced by the lecturer. These exercises are to be solved by the students in form of self-organized studies. The solutions will be presented and discussed by the students during the exercise.</p> |
| Recommended Prerequisites | Basic skills in mathematics, classical mechanics and thermodynamics are expected, Advanced skills in vector calculus and tensor analysis, statistics and discrete mathematics, in fluid mechanics and thermodynamics are very helpful in gaining understanding of the lectures and provide a sound basis for solving the exercises. |
| Mandatory Prerequisites | none |
| Forms of Teaching and Proportion | Lecture - 2 hours per week per semester Exercise - 2 hours per week per semester Self organised studies - 120 hours |
| Teaching Materials and Literature | Climate Change 2013: The Physical Science Basis, Working Group 1 Contribution to the fifth Assessment Report of the IPCC, Editor: IPCC. Further literature together with lecture and exercise materials are made available in electronic form during the semester. |
| Module Examination | Continuous Assessment (MCA) |
| Assessment Mode for Module Examination | <ul style="list-style-type: none"> • Solution of 3 exercises (50%) • Written examination, 45 Min. (50%) |
| Evaluation of Module Examination | Performance Verification – graded |
| Limited Number of Participants | none |
| Remarks | No offer in winter semester 2024/2025. |
| Module Components | none |
| Components to be offered in the Current Semester | No assignment |

Module 12949 Geoecology

assign to: Compulsory Elective Modules

Study programme Environmental and Resource Management

| Degree | Module Number | Module Form |
|-------------------|---------------|---------------------|
| Master of Science | 12949 | Compulsory elective |

| | |
|---|--|
| Modul Title | Geoecology Geoökologie |
| Department | Faculty 2 - Environment and Natural Sciences |
| Responsible Staff Member | Dr.-Ing. Repmann, Frank |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | Every semester |
| Credits | 6 |

Learning Outcome

Rationale

Geoecology is an interdisciplinary science that integrates the geosciences with the life sciences. The purpose of this module is to extend the basic knowledge of geoecology with respect to anthropogenically induced challenges. Selected issues of soil science and applied soil protection, and related ecological problems will be reflected. Furthermore, the fundamentals of environmental toxicology with regard to adverse effects of chemicals on living systems will be taught.

Lecture:

The lecture of ecotoxicology deals with the potentially harmful impact of chemicals, present as pollutants in the environment, to living organisms with particular focus on soil. In this course students will learn about:

- aspects of geoecology
- basic concept of ecotoxicology
- existing natural and synthetic chemicals
- influence of industrial and agricultural development/processes with regard to chemicals in the environment
- fate of chemicals (distribution, uptake, accumulation and possible degradation)
- detection and risk assessment of contamination

Exercise/Practical training:

The exercise/practical training offers a practical approach, which is necessary to understand the fundamentals of geoecological research. Students will learn about:

- study design and planning

- field sampling
- laboratory analyses
- preparing a scientific report

Contents

Part 1: Lecture:

- goals and definitions
- classes/groups of chemicals and their potential negative impacts on the environment
- routes of entry of these chemicals into the environment and relevance
- fate of chemicals
- general principles of ecotoxicology -> toxicity -> dose-response relationships -> reception
- factors that can possibly influence the toxicity of environmental chemicals
- investigation methods

- o measurement and assessment of basic site/soil parameters
- o selected toxicity tests
- o risk assessment
 - special investigation methods and selected case studies
 - phytoremediation
 - two short tests (approx. 30 minutes each)

Part 2: Exercise/Practical training, practical work in the field and laboratory:

- study design/problem formulation
- sampling in the field
- laboratory analysis
- writing a technical report

Recommended Prerequisites

Knowledge in chemistry, biology and soil science

Mandatory Prerequisites

none

Forms of Teaching and Proportion

Lecture - 2 hours per week per semester
Exercise - 2 hours per week per semester
Self organised studies - 120 hours

Module 12959 Geopedology

assign to: Compulsory Elective Modules

Study programme Environmental and Resource Management

| Degree | Module Number | Module Form |
|-------------------|---------------|---------------------|
| Master of Science | 12959 | Compulsory elective |

| | |
|---|--|
| Modul Title | Geopedology Geopedologie |
| Department | Faculty 2 - Environment and Natural Sciences |
| Responsible Staff Member | Prof. Dr. phil. Raab, Thomas |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | Every winter semester |
| Credits | 6 |
| Learning Outcome | Geopedology deals with an integrative approach of soil science, geomorphology and geology. Students will learn the main factors and processes controlling soil formation and soil properties as well as landform evolution. The significance of both past and modern human impacts for ecosystems will be shown. Attention is paid to natural and anthropogenic processes of landscapes development in the mid-latitudes during the Late Pleistocene and Holocene. |
| Contents | Fundamentals in Pedology Fundamentals in Geomorphology Soil-landscape relationships Methods in Geopedology |
| Recommended Prerequisites | Knowledge in Quaternary Science, Geology, Soil Science or Physical Geography |
| Mandatory Prerequisites | none |
| Forms of Teaching and Proportion | Lecture - 2 hours per week per semester Seminar - 2 hours per week per semester Self organised studies - 120 hours |
| Teaching Materials and Literature | none |
| Module Examination | Continuous Assessment (MCA) |
| Assessment Mode for Module Examination | <ul style="list-style-type: none"> • Lecture: 2 Exams, each 45 min. for 25 points each • Seminar: 4 Exams, each 45 min. for 12,5 points each |

| | |
|---|---|
| Evaluation of Module Examination | Performance Verification – graded |
| Limited Number of Participants | none |
| Remarks | none |
| Module Components | <ul style="list-style-type: none">• 240421 Seminar Geopedology• 240401 Lecture Geopedology |

Module 12983 Climate Change and Migration

assign to: Compulsory Elective Modules

Study programme Environmental and Resource Management

| Degree | Module Number | Module Form |
|-------------------|---------------|---------------------|
| Master of Science | 12983 | Compulsory elective |

| | |
|---|---|
| Modul Title | Climate Change and Migration Klimawandel und Migration |
| Department | Faculty 5 - Business, Law and Social Sciences |
| Responsible Staff Member | Associate Prof. (Univ. Damaskus) Dr. agr. Ibrahim, Bachar |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | Every summer semester |
| Credits | 6 |
| Learning Outcome | After completion of this module, students will have a solid understanding of Climate Change and its impacts, especially on vulnerable countries. Students will further have the knowledge about various concepts and logical arguments linking climate change and migration. |
| Contents | <p>Part "Climate Change"</p> <ul style="list-style-type: none"> • Observations of change in the climate system • Critically assess the role of human activities in modern climate change • Assess future climate change scenarios and their potential impact on the Earth • climate change agenda and how this agenda impact on policy • Identify the Impacts and related Adaptation masures <p>Part "Migration"</p> <ul style="list-style-type: none"> • The potential link between climate change, migration, • The Task of defining 'climate refugee' • climate change contribution to the refugee problems • Gaps in the international legal framework • Individual and Collective Action on Mitigation <p>Lectures will be given live online and afterwards uploaded as a PDF on the moodle For the exercise, students have to solve a given problem. Students have to select a topic on moodle and register in the given table (maximum of 4 students per group).</p> |
| Recommended Prerequisites | none |

| | |
|---|---|
| Mandatory Prerequisites | none |
| Forms of Teaching and Proportion | Lecture - 2 hours per week per semester Seminar - 2 hours per week per semester Self organised studies - 120 hours |
| Teaching Materials and Literature | <ul style="list-style-type: none"> • Environment, forced migration and social vulnerability, T. Afifi, J. Jäger - 2010 - Springer • Climate change, human security and violent conflict: challenges for societal stability, J. Scheffran, M. Brzoska, H.G. Brauch, P.M. Link... - 2012 • People on the move in a changing climate: The regional impact of environmental change on migration, E. Piguët, F. Laczko - 2013 • Global migration governance, A. Betts - 2011 • Disentangling migration and climate change, T. Faist, J. Schade - 2013 - Springer • Climate change and migration: security and borders in a warming world, G. White – 2011- Oxford University Press |
| Module Examination | Continuous Assessment (MCA) |
| Assessment Mode for Module Examination | <ul style="list-style-type: none"> • Oral Exam, 30 min. (50%) • Two presentations on the a scientific topic (each 25%) <p>A pass mark is only achieved by obtaining at least 50% of the grade for each part of the module. The examination as well as the seminar part have to be passed (at least 50% in each) to pass the module.</p> |
| Evaluation of Module Examination | Performance Verification – graded |
| Limited Number of Participants | none |
| Remarks | An annual excursion pertaining to the module may be organised. <i>Complementary Module in Master Environmental and Resource Management.</i> |
| Module Components | <ul style="list-style-type: none"> • Lecture • Seminar • Examination |
| Components to be offered in the Current Semester | <p>520223 Lecture Climate Change and Migration - 2 Hours per Term</p> <p>520224 Seminar Climate Change and Migration - 2 Hours per Term</p> |

Module 12989 Process System Technology II

assign to: Compulsory Elective Modules

Study programme Environmental and Resource Management

| Degree | Module Number | Module Form |
|-------------------|---------------|---------------------|
| Master of Science | 12989 | Compulsory elective |

| | |

Module 13046 Microclimates

assign to: Compulsory Elective Modules

Study programme Environmental and Resource Management

| Degree | Module Number | Module Form |
|-------------------|---------------|---------------------|
| Master of Science | 13046 | Compulsory elective |

| | |
|---|---|
| Modul Title | Microclimates Mikroklima |
| Department | Faculty 2 - Environment and Natural Sciences |
| Responsible Staff Member | Prof. Dr. rer. nat. Trachte, Katja |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | Every summer semester |
| Credits | 6 |
| Learning Outcome | The module offers in-depth insight into spatio-temporal atmospheric phenomena with special reference to urban areas and their periphery. Students acquire a basic knowledge of cross-scale processes and mechanisms related to local (topo-) climates, get the competence to carry out climatological analysis in space and time applying IT-based methodologies such as statistical analyses and machine learning approaches. |
| Contents | <p>In the lecture professional aspects of microclimates are addressed, such as:</p> <ul style="list-style-type: none"> • definition of microclimates • physical systems • differences in atmospheric conditions • influence of elevation and land use types • radiation budget • UHI • local scale wind systems and ventilation • ABL and NBL <p>The exercise consists of two parts: Part 1 Exercises</p> <ul style="list-style-type: none"> • analysis of spatio-temporal atmospheric data, e.g. in-situ measurements and spatial-explicit data • IT-based training using GIS and programming languages such as Python • Statistical analysis and machine learning approaches |

| | |
|---|---|
| | Part 2 Field campaign: <ul style="list-style-type: none"> • one coherent field campaign including measurements of microclimatological conditions |
| Recommended Prerequisites | Basic knowledge in atmospheric sciences and climatology, basic knowledge in statistics |
| Mandatory Prerequisites | none |
| Forms of Teaching and Proportion | Lecture - 2 hours per week per semester Exercise - 2 hours per week per semester Excursion - 12 hours Self organised studies - 108 hours |
| Teaching Materials and Literature | Recommended literature: Thomas Foken: Micrometeorology. Springer, Berlin, 2017. Roger G. Barry: Microclimate and Local Climate. Cambridge University Press, 2016. |
| Module Examination | Continuous Assessment (MCA) |
| Assessment Mode for Module Examination | 1. Weekly exercises in form of data analyses and visualization (30%) 2. Submission of a research project (70%), 8-10 pages; c. 2000-3000 words |
| Evaluation of Module Examination | Performance Verification – graded |
| Limited Number of Participants | none |
| Remarks | none |
| Module Components | Lecture – Microclimates Exercise - Microclimates Field campaign - Microclimates |

Module 13221 Land surface - Atmosphere Interactions

assign to: Compulsory Elective Modules

Study programme Environmental and Resource Management

| Degree | Module Number | Module Form |
|-------------------|---------------|---------------------|
| Master of Science | 13221 | Compulsory elective |

| | |
|---|--|
| Modul Title | Land surface - Atmosphere Interactions Landoberflächen - Atmosphären Interaktion |
| Department | Faculty 2 - Environment and Natural Sciences |
| Responsible Staff Member | Prof. Dr. rer. nat. Trachte, Katja |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | Every winter semester |
| Credits | 6 |
| Learning Outcome | The module offers fundamental knowledge of physical processes and methodologies related to land surface – atmosphere interactions and its relevance in the context of climate change, e.g. carbon and water cycle, factors of changes in surface energy fluxes, soil-vegetation-atmosphere transport, ecophysiological interactions. Students get the competence to assess relevant aspects related to global change as well as to apply IT-based approaches. |
| Contents | In the lecture professional aspects of land surface – atmosphere interactions are addressed, such as: <ul style="list-style-type: none"> · turbulence and the development of PBL structure · carbon cycle · water availability · water use efficiency · ecophysiology · measurement techniques, e.g. eddy-covariance · remote sensing · modeling approaches In the exercise the knowledge gained will be applied using the programming language Python to trainee statistical data analyses (e.g. spatial data mining, machine learning approaches, GLM) and visualization in the field of atmospheric / environmental sciences. |
| Recommended Prerequisites | none |
| Mandatory Prerequisites | none |
| Forms of Teaching and Proportion | Lecture - 2 hours per week per semester |

| | |

Module 13298 Basics for Freshwater Management

assign to: Compulsory Elective Modules

Study programme Environmental and Resource Management

| Degree | Module Number | Module Form |
|-------------------|---------------|---------------------|
| Master of Science | 13298 | Compulsory elective |

| | |
|---|---|
| Modul Title | Basics for Freshwater Management Grundlagen des Gewässermanagements |
| Department | Faculty 2 - Environment and Natural Sciences |
| Responsible Staff Member | Prof. Dr. rer. nat. habil. Martin-Creuzburg, Dominik |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | Every winter semester |
| Credits | 6 |
| Learning Outcome | Students understand freshwaters as ecosystems and know the ecological principles underlying ecological management and how to differentiate between naturally and anthropogenically introduced variability in freshwater ecosystems. They know the main groups of freshwater organisms, and understand the functioning and biogeochemical role of lake and stream ecosystems and their role in landscapes. Specifically, students understand how freshwater organisms achieve the freshwater ecosystem services that humans require. Students know the main anthropogenic impacts on freshwater resources. They understand the consequences of these impacts through their interaction with ecological processes. Students will thus be able to evaluate the consequences of major impacts to aquatic organisms and ecosystem functioning and related those to the European Water Framework Directive as the base for evaluation and management of freshwater resources. |
| Contents | Physical and chemical properties of water. Running water ecosystems: Characteristics, variability and typology, connected functional compartments and main groups of organisms, ecosystem functioning, matter transformation and ecosystem services. Ponds and lakes: Genesis and typology, biogeochemistry of water and sediment, habitats and organisms; lake shores and macrophyte ecology. Main water quality problems related to agriculture, forestry, urbanization and mining; eutrophication, acidification, salinization, siltation, contamination, effects of neobiota; hydromorphological degradation of streams and rivers; loss of ecosystem services in degraded freshwaters; expected impacts of climate change. Principles of sustainable water management; principles of lake diagnosis, elementary modeling of lake |

| | |
|---|--|
| | quality, quality assessment and evaluation as prerequisites for mitigation and restoration; EU Water Framework Directive; overview on strategies to conserve and improve impacted freshwaters. |
| Recommended Prerequisites | Basics in environmental sciences, ecology or similar. |
| Mandatory Prerequisites | none |
| Forms of Teaching and Proportion | Lecture - 3 hours per week per semester Exercise - 1 hours per week per semester Self organised studies - 120 hours |
| Teaching Materials and Literature | none |
| Module Examination | Continuous Assessment (MCA) |
| Assessment Mode for Module Examination | Written examination (80 minutes) in the first examination period. The exam will contribute 75 % to the module grade. The grades for exercises, tests and assignments which have to be handed in online via Moodle will contribute 25% to the module grade. |
| Evaluation of Module Examination | Performance Verification – graded |
| Limited Number of Participants | none |
| Remarks | <p>The module is taught as online course via Moodle. The course follows a blended learning concept in a strict weekly rhythm. It consists of A) self-organized study of the learning material of the week (learning and lecture videos, reading material, exercises) and B) live meetings in the online classroom for clarification of open questions and discussions to reflect and consolidate the understanding of the past week’s learning material.</p> <p>The blended learning in weekly rhythm requires continuous participation. Enrolment in the Moodle course is mandatory for this module. The Moodle enrolment key will be provided in the first lecture which will take place in presence on 18 October.</p> <p>The <u>module is a mandatory prerequisite for the course Freshwater Restoration Ecology (module 42505)</u> which is offered in summer semester.</p> |

Module 13515 Advanced Methods in Process, Energy and Systems Engineering

assign to: Compulsory Elective Modules

Study programme Environmental and Resource Management

| Degree | Module Number | Module Form |
|-------------------|---------------|---------------------|
| Master of Science | 13515 | Compulsory elective |

| | |
|---|--|
| Modul Title | Advanced Methods in Process, Energy and Systems Engineering Erweiterte Methoden zur Prozessmodellierung und Optimierung in der Energie- und Verfahrenstechnik |
| Department | Faculty 3 - Mechanical Engineering, Electrical and Energy Systems |
| Responsible Staff Member | Prof. Dr.-Ing. Arellano-Garcia, Harvey |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | Every summer semester |
| Credits | 6 |
| Learning Outcome | The module requires a basic background in calculus and linear algebra, thus allowing easy understanding of mathematical reasoning. In addition, numerous examples in process, energy, environmental and systems engineering will demonstrate key concepts and algorithms. The practical exercises will involve theoretical derivations and small-size numerical problems in modelling systems like matlab, python, octave, GAMS thus putting knowledge into practice. |
| Contents | This module will teach approaches to modelling and optimization frameworks to address the complex process and energy problems, which arise in design and operation of process and energy systems in an integrated way. Moreover, the presented theoretical and methodological concepts are joined conceptionally with optimal designed experiments to adjust the fundamental mathematical models and to validate the developed process concepts. The taught methods are of generic character, and thus, producing optimal design and operational plans for process and energy systems ranging from microscale to mega-scale stages over operative time horizons from milliseconds to years. The approaches to be discussed will mainly be around superstructure-based modelling, mixed-integer linear and nonlinear programming, multiobjective optimization, optimization under uncertainty, and life-cycle assessment. The presented case studies will be around advanced process systems for renewable energy conversion, separation and reaction systems as well as biotechnological production systems. |

Module 13580 Systems and Process Hydrology

assign to: Compulsory Elective Modules

Study programme Environmental and Resource Management

| Degree | Module Number | Module Form |
|-------------------|---------------|---------------------|
| Master of Science | 13580 | Compulsory elective |

| | |
|---|--|
| Modul Title | Systems and Process Hydrology System- und Prozesshydrologie |
| Department | Faculty 2 - Environment and Natural Sciences |
| Responsible Staff Member | Prof. Dr. rer. nat. Hinz, Christoph |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | Every winter semester |
| Credits | 6 |
| Learning Outcome | Students are able to analyse hydrological processes and to obtain and interpret hydrological data from hydrological annuals and internet sources. They can use standard procedures for hydrological dimensioning, probability analysis and extreme value statistics (especially flood statistics). They are furthermore able to apply basic methods of deterministic simulation of hydrological processes, modelling and modelling. |
| Contents | Description of hydrological processes as well as evaluation and presentation of associated data; adaptation of distribution functions to runoff data, derivation of flood design values with different data; design precipitation. Basic system hydrological description approaches; application of system hydrology for river basin modelling. Deepening of the methods in exercises with practical examples. |
| Recommended Prerequisites | knowledge of hydrology |
| Mandatory Prerequisites | none |
| Forms of Teaching and Proportion | Lecture - 2 hours per week per semester Seminar - 2 hours per week per semester Self organised studies - 120 hours |
| Teaching Materials and Literature | Lecture presentations, scripts for the exercises, literature references and questionnaires are made available via the online portal Moodle. Further literature: |

Module 13653 Atmospheric Water

assign to: Compulsory Elective Modules

Study programme Environmental and Resource Management

| Degree | Module Number | Module Form |
|-------------------|---------------|---------------------|
| Master of Science | 13653 | Compulsory elective |

| | |
|---|--|
| Modul Title | Atmospheric Water Atmosphärisches Wasser |
| Department | Faculty 2 - Environment and Natural Sciences |
| Responsible Staff Member | Prof. Dr. rer. nat. Trachte, Katja |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | Every winter semester |
| Credits | 6 |
| Learning Outcome | The module offers fundamental knowledge of physical processes and methodologies related to the atmospheric water cycle and its relevance in the context of climate change, e.g. water vapor fluxes and pathways, cloud microphysical processes, precipitation. Students get the competence to assess relevant aspects related to atmospheric water transport and availability, water use efficiency and cloud – albedo feedbacks as well as to apply IT-based approaches. |
| Contents | In the lecture professional aspects of atmospheric water processes: <ul style="list-style-type: none"> · Atmospheric water fluxes · Water vapor pathways · Cloud microphysics · Cloud-albedo feedbacks · Precipitation processes · Water availability · Water use efficiency · Remote sensing · Modeling approaches In the exercise the knowledge gained will be applied using programming languages such as R and Python to trainee atmospheric remote sensing, data assimilation and modelling approaches in the field of atmospheric / environmental sciences. |
| Recommended Prerequisites | none |
| Mandatory Prerequisites | none |
| Forms of Teaching and Proportion | Lecture - 2 hours |

| | |
|---|---|
| | Exercise - 2 hours |
| Teaching Materials and Literature | Recommended literature: H.R. Pruppacher & J.D. Klett: Microphysics of Clouds and Precipitation. Springer, 2010, Vol 18. R.A. Jr. Houze: Cloud Dynamics, 2014, 2nd Ed., Elsevier/Academic Press, Oxford |
| Module Examination | Continuous Assessment (MCA) |
| Assessment Mode for Module Examination | 1. Weekly exercises in form of data analyses and visualization (30%) 2. Submission of a project (70%) Submission encompass 8-10 pages including approx. 2000-3000 words. A group submission is scheduled. Individual grading can be achieved according to the uploaded program code. |

| Modul Title | Un/Disciplining Knowledge: Technology, Science, and Society in Transformation |
| | Epistemischer Ungehorsam: Technik, Wissenschaft und Gesellschaft im Wandel |
| Department | Faculty 5 - Business, Law and Social Sciences |
| Responsible Staff Member | Prof. Dr. rer. nat. phil. habil. Schwarz, Astrid |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | Every winter semester |
| Credits | 6 |
| Learning Outcome | By the end of the module students are able to develop a research question within the academic field of Science and Technology Studies and create and present a research design, as well as identify and make use of appropriate sources of empirical material for your analysis, furthermore to identify, select and compare appropriate concepts and methods relating to an interdisciplinary research field and analyse changes in fields of science and technology with respect to knowledge forms. |
| Contents | This module presents central theories and approaches developed in Science and Technology Studies. The module focuses on questions about disciplining and undisciplining knowledge, the corresponding epistemic and ontological perspectives and the political economy of science. It explores concepts being concerned about shifting concepts of disciplinarity, such as interdisciplinarity, transdisciplinarity or postdisciplinarity. |
| Recommended Prerequisites | Knowledge from the courses <ul style="list-style-type: none"> • Technik in Wissenschaft und Gesellschaft • Philosophy of Science in Practice |
| Mandatory Prerequisites | none |
| Forms of Teaching and Proportion | Lecture - 2 hours per week per semester Seminar - 2 hours per week per semester |

| | |
|---|--|
| | Self organised studies - 120 hours |
| Teaching Materials and Literature | Literature and learning materials are given in the course description. |

Module 13657 How to Talk about Nature?

assign to: Compulsory Elective Modules

Study programme Environmental and Resource Management

| Degree | Module Number | Module Form |
|-------------------|---------------|---------------------|
| Master of Science | 13657 | Compulsory elective |

| | |
|---|--|
| Modul Title | How to Talk about Nature? Wie über Natur sprechen? |
| Department | Faculty 5 - Business, Law and Social Sciences |
| Responsible Staff Member | Prof. Dr. rer. nat. phil. habil. Schwarz, Astrid |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | Every winter semester |
| Credits | 6 |
| Learning Outcome | After passing the module, students understand main philosophical theories of “nature”, interrogate the concept of “nature” and expose its numerous ideological and cultural manifestations. They identify the main ethical dimensions of “nature”, and its crosscultural and political dimensions. Additionally they understand the power of narratives and storytelling to shape our environmental present and future by insight into reading, writing, and visual practices about “nature”. |
| Contents | <p>“How to talk about nature?” is closely linked to the question of what “nature” is, how it is construed and in which way we act with, in or against it. It is a question that is ontological and epistemological at the same time, it is about how we imagine nature “to be” and how we conceive knowledge about nature. The ideas about this entwinement are manifold over time and in space, different cultures have developed different ways of thinking and also practices of how to deal with a culture/nature distinction. Another important conceptual issue is how nature and technology are related, in contemporary debates for instance, “nature” is often identified with “environment” and as such inescapably entangled with its cultural, political, and technological context. Is the use of technology in “nature” then a threat or an opportunity to build a genuinely sustainable world?</p> <p>This module seeks to answer these and other questions, by approaching “nature” with variously grounded historical and contemporary theoretical approaches. For example, the concept of “nature” was differently interpreted in ancient times, compared to modern contemporary cultures. We will probe the different usage, the scope of historical and cross-cultural depth, the semantics, the images/ imaginaries, and finally, the logical coherence of “nature” concepts.</p> |

This variety of topics means that the assigned readings will draw from a wide range of sources. With respect to handle current ecological and technocultural problems, a conscious reflection about “nature” seems to be required. Thus, the module should be also seen, in part, as a way to gain insight into contemporary reading, writing, and visual practices about “nature”.

Participation in the accompanying excursion is encouraged.

Module 13663 Environmental Soil Science and Plant Nutrition

assign to: Compulsory Elective Modules

Study programme Environmental and Resource Management

| Degree | Module Number | Module Form |
|-------------------|---------------|---------------------|
| Master of Science | 13663 | Compulsory elective |

| | |
|---|--|
| Modul Title | Environmental Soil Science and Plant Nutrition Umweltbezogene Bodenkunde und Pflanzenernährung |
| Department | Faculty 2 - Environment and Natural Sciences |
| Responsible Staff Member | Prof. Ph. D. Rütting, Louise |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | Every winter semester |
| Credits | 6 |
| Learning Outcome | <p>After completing this course, the student will be able to understand:</p> <ul style="list-style-type: none"> • fundamental chemical properties and processes in soil • scientific methods employed for the remediation of contaminated soils • natural and anthropogenic factors and processes in soil and plant systems • basic principles of plant nutrient uptake • nutrient assimilation of plants with focus on the nitrogen and phosphate cycle • main sources and sinks of greenhouse gases |
| Contents | <p>Part 1: Soil Science/Soil Chemistry Introduction to the principles of soil chemistry, including properties of soil minerals and their interactions with essential plant nutrients. We will focus on soil solution dynamics, sorption processes, and redox reactions. In addition, students will gain insights into soil water dynamics and the importance of soil organic matter.</p> <p>Part 2: Plant Nutrition The student learns about the importance of mineral nutrition in plants, including essentiality, availability, and applications, as well as their management and control strategies. We have a focus on plant nutrient uptake, the rhizosphere and nutrient starvation. The student will gain insight into the different processes of bioremediation and phytoremediation dealing with contamination problems in a scientific and ecological way. In a seminar we will discuss numerous remediation approaches.</p> |

| | |
|---|--|
| | An excursion followed by a laboratory practical will combine the plant nutrition and soil sections. |

Module 13664 Soil Reclamation and Landscape Restoration

assign to: Compulsory Elective Modules

Study programme Environmental and Resource Management

| Degree | Module Number | Module Form |
|-------------------|---------------|---------------------|
| Master of Science | 13664 | Compulsory elective |

| | |
|---|---|
| Modul Title | Soil Reclamation and Landscape Restoration Bodensanierung und Landschaftsrenaturierung |
| Department | Faculty 2 - Environment and Natural Sciences |
| Responsible Staff Member | Dr. rer. nat. Badorreck, Annika |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | Every summer semester |
| Credits | 6 |
| Learning Outcome | <p>After completing this course the student will be able to understand</p> <ul style="list-style-type: none"> - the social need for management and protection of soils and ecosystems - prevention strategies of soil degradation and its crucial role in global food security - basic definitions and principles of sustainable and climate-smart agriculture, forestry and land management <p>fundamental features and measures of soil reclamation and landscape restoration</p> <ul style="list-style-type: none"> - deduction of restored soils functions, ecosystem functions and ecosystem services. |
| Contents | <p>Scientific content: This course examines principles and strategies for soil reclamation and landscape restoration in tropical and subtropical regions of the Global South. It introduces climate-smart agriculture, forestry and livestock management. Emphasizing sustainable soil and land management, it explains how these practices can mitigate and adapt to climate change. The course also covers Sustainable Land Management (SLM) practices contributing to global goals, particularly SDG target 15.3 on achieving land degradation neutrality. It discusses urban forestry, its ecosystem benefits, and the challenges involved. Additionally, the course addresses soil salinization, proposing strategies for managing its effects on agriculture.</p> <p>Teaching concept: eLearning packages containing thematic lessons were provided to the students in order to engaging students through active self-paced learning. Four online certification tests within these packages account for in total 40% of the modul grade. Seminar: A scientific paper covering a topic of the modul is assigned to students.</p> |

The content of the paper will then be presented as an oral presentation in the seminar at the end of the module by a group of students or as individual followed by a discussion (60% of modul grade).

| | |

Module 13706 Justice and Diversity in Environmental Change

assign to: Compulsory Elective Modules

Study programme Environmental and Resource Management

| Degree | Module Number | Module Form |
|-------------------|---------------|---------------------|
| Master of Science | 13706 | Compulsory elective |

| | |
|---|--|
| Modul Title | Justice and Diversity in Environmental Change |
| | Gerechtigkeit und Diversität im Kontext von Umweltveränderungen |
| Department | Faculty 5 - Business, Law and Social Sciences |
| Responsible Staff Member | Prof. Dr. phil. Jaeger-Erben, Melanie |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | Every winter semester |
| Credits | 6 |
| Learning Outcome | <ul style="list-style-type: none"> • Acquiring a profound understanding of different concepts on social justice and diversity in the context of environmental change, climate change and sustainable development. • Discussing and critically reflecting upon current issues related to environmental justice, such as resource conflicts, land-use change or environmental movements. • Methodological skills in reading and discussing academic texts, preparing Pecha Kucha presentations, and recording scientific podcasts. |
| Contents | <p>Environmental problems have the capacity to affect all of us. However, certain communities are disproportionately exposed to environmental hazards, such as air pollution. Also, some regions of the world (will) suffer much more from the implications of climate change. Environmental problems thus do not affect us all equally, or in the same way. Nor do we have equal power to decide solutions to these problems, or to take the necessary action to solve them. This unequal positioning, which often impose the greatest burdens upon marginalised, disadvantaged and less powerful populations, forms the central premise of environmental justice research and activism. The goal of this module is to gain a comprehensive understanding of social justice, environmental justice and diversity in environmentalism. The course introduces concepts such as environmental racism, climate justice, ecofeminism, and indigenous perspectives on environmental change. The theoretical perspectives introduced are applied to various environmental movements and resource conflicts all over the world.</p> |

Module 13737 Practical Course Aquatic Ecology

assign to: Compulsory Elective Modules

Study programme Environmental and Resource Management

| Degree | Module Number | Module Form |
|-------------------|---------------|---------------------|
| Master of Science | 13737 | Compulsory elective |

| | |
|---|--|
| Modul Title | Practical Course Aquatic Ecology Praktikum Gewässerökologie |
| Department | Faculty 2 - Environment and Natural Sciences |
| Responsible Staff Member | Prof. Dr. rer. nat. habil. Martin-Creuzburg, Dominik |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | Every summer semester |
| Credits | 6 |
| Learning Outcome | The students know basic methods for the investigation of standing and running waters and can apply them independently. They can effectively use different data and information in order to answer research questions or develop hypotheses. The students can compare and assess the possibilities and limitations of methods and data in aquatic ecology. |
| Contents | Recording and evaluation of abiotic and biotic water quality parameters within the framework of a case study on a watercourse and a standing water body. Field measurements with different probes, limnological sampling techniques and laboratory analyses, process measurements, experimental approaches, microscopy of aquatic organisms, data analyses and preparation of reports. |
| Recommended Prerequisites | 13298 Basics for Freshwater Management or/and 42505 Freshwater Restoration Ecology. Commitment and willingness for active participation, self-organized work, teamwork and self-study. |
| Mandatory Prerequisites | none |
| Forms of Teaching and Proportion | Practical training - 80 hours Self organised studies - 100 hours |
| Teaching Materials and Literature | The necessary materials for the practical part will be provided. |
| Module Examination | Continuous Assessment (MCA) |
| Assessment Mode for Module Examination | Oral presentations and written reports of the results for each part, Running Waters and Standing Waters. |

Part Running Waters:

- 15 min presentation on one of the methods to be applied (10%)
- Course participation (10%)
- Presentation of results and written report (ca. 3 - 5 pages without figures and/or tables, 11 pt font, line spacing no more than 1.2) (30%)

Part Standing Waters:

- 15 min presentation on one of the methods to be applied (10%)
- Course participation (10%)
- Presentation of results and written report (ca. 3 - 5 pages without figures and/or tables, 11 pt font, line spacing no more than 1.2) (30%)

Evaluation of Module Examination

Performance Verification – graded

Limited Number of Participants

12

Remarks

The course will take place as a block course during the lecture-free period of the 2026 summer semester from August 17 to September 4, 2026. The number of participants is limited to 12 students. The Standing water part will take place from August 17 to 21, 2026, at the Research Station of the Department of Aquatic Ecology in Bad Saarow. This requires all students to stay overnight in a youth hostel in Bad Saarow. The accommodation costs of ~€150 will be paid by the students themselves. In order to process the booking and deposit for the accommodation and to guarantee binding participation in the module, a deposit of €100 is required. The payment terms will be communicated to students by the Department of Aquatic Ecology after they have registered for the module with the Examination Office.

The Department of Aquatic Ecology will decide on final admission to the module. This depends on the student's qualifications and receipt of the deposit for accommodation. Only after receiving a positive decision from the Department of Aquatic Ecology will the student be given access to the course page on Moodle.

Module 13822 Biodiversity of Terrestrial Arthropods

assign to: Compulsory Elective Modules

Study programme Environmental and Resource Management

| Degree | Module Number | Module Form |
|-------------------|---------------|---------------------|
| Master of Science | 13822 | Compulsory elective |

| | |
|---|---|
| Modul Title | Biodiversity of Terrestrial Arthropods Biodiversität terrestrischer Arthropoden |
| Department | Faculty 2 - Environment and Natural Sciences |
| Responsible Staff Member | Prof. Dr. rer. nat. Birkhofer, Klaus |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | Every summer semester |
| Credits | 6 |
| Learning Outcome | <p>The module Biodiversity of Terrestrial Arthropods provides an overview of the taxonomy and ecology of arthropods in terrestrial ecosystems with a mandatory 5-day excursion during the semesters excursion week and student projects.</p> <p>Part "Biodiversity: Lecture" The lectures introduce the taxonomy of terrestrial invertebrates with diagnostics for major orders and highlight the ecology of selected case taxa. Students will learn about</p> <ul style="list-style-type: none"> • Phylogenetic relationships of major terrestrial invertebrate orders • Identification and diagnostics of major terrestrial invertebrate orders • Ecology of major terrestrial invertebrate orders <p>Part "Biodiversity: Seminar" The seminars are based on student presentations of an assigned scientific publication focusing on the ecology of selected terrestrial invertebrate taxa. Students will learn about</p> <ul style="list-style-type: none"> • Interpretation of scientific articles • Ecology of a selected case taxon • Summarizing and presenting scientific results <p>Part "Biodiversity: Excursion" Students will learn:</p> <ul style="list-style-type: none"> • Ecological field work methods with a focus on biodiversity assessment |

Contents

- Identification of arthropods and use of taxonomic determination keys

The courses will take students to an ecological field station in Brandenburg for five days during the semesters excursion week. A small fee of 10€ will be collected from all participating students to cover some of the costs.

Part "Biodiversity: Lecture"

- Terrestrial arthropod taxonomy
- Terrestrial arthropod ecology

Part "Biodiversity: Seminar"

- Threats to terrestrial arthropod biodiversity
- Status of terrestrial arthropod biodiversity
- Solutions to biodiversity loss in terrestrial arthropod communities

Part "Biodiversity: Excursion"

- Field methods to sample biodiversity with a focus on terrestrial arthropods
- Diagnostic criteria to identify major terrestrial arthropod orders in the field and laboratory

Recommended Prerequisites

For international study programmes and master students module "41217 General and Applied Ecology" or for BSc students module "41102 Ecology". For German study programmes module „14324 Terrestrische Ökologie" or module „41203 Allgemeine Ökologie".

Mandatory Prerequisites

none

Forms of Teaching and Proportion

Lecture - 1 hours per week per semester
Seminar - 1 hours per week per semester
Excursion - 32 hours
Self organised studies - 118 hours

Teaching Materials and Literature

Part "Biodiversity: Lecture"

The class is organized as a weekly lecture introducing major orders of terrestrial arthropods. Lecture-like presentations are complemented by discussions. Self-organized work, in particular acquiring more detailed knowledge of the taxonomic groups is required.

E-books

Piper R, What Insects Do, and Why

Schowalter TD, Insect ecology: an ecosystem approach

Beutel RG & Friedrich F, Insect morphology and phylogeny

Resh VH, Encyclopaedia of insects

New TR, Insect species conservation: Ecology, biodiversity, and conservation

Samways MJ, Insect diversity conservation

Part "Biodiversity: Seminar"

A scientific paper focusing on the ecology of a major order of terrestrial invertebrates is assigned to students. The content of the paper will then be presented as an oral presentation in the seminar by the students following the lecture. All seminar topics and material is provided.

Part " Biodiversity: Excursion"

Students will write a report on an assigned excursion. Participation in these half-day ecological excursions is mandatory. All material for the excursions is provided.

E-books

Brock PD, Britain's Insects: A Field Guide to the Insects of Great Britain and Ireland

Santos JC, Measuring arthropod biodiversity: a handbook of sampling methods

Module Examination

Continuous Assessment (MCA)

Assessment Mode for Module Examination

Part "Biodiversity: Seminar"

One oral presentation, 25 min + 20 min discussion (50%)

Part " Biodiversity: Excursion "

One written report summarising the results from the 5-day excursion (50%)

Evaluation of Module Examination

Performance Verification – graded

Limited Number of Participants

none

Remarks

The courses will take students to an ecological field station in Brandenburg for five days during the semesters excursion week. A small fee of **10 €** will be collected from all participating students to cover some of the costs.

Module 13831 Process Simulation in Chemical and Process Engineering

assign to: Compulsory Elective Modules

Study programme Environmental and Resource Management

| Degree | Module Number | Module Form |
|-------------------|---------------|---------------------|
| Master of Science | 13831 | Compulsory elective |

| | |
|---|--|
| Modul Title | Process Simulation in Chemical and Process Engineering Prozesssimulation in der Chemie- und Verfahrenstechnik |
| Department | Faculty 3 - Mechanical Engineering, Electrical and Energy Systems |
| Responsible Staff Member | Prof. Dr.-Ing. Arellano-Garcia, Harvey |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | Every winter semester |
| Credits | 6 |
| Learning Outcome | After completing the module, students will be able to analyse physical and chemical phenomena involved in different processes, develop mathematical models and use different process simulation approaches using ASPEN PLUS. |
| Contents | <ul style="list-style-type: none"> • Fundamentals: Continuity equations, energy conservation, momentum conservation and state equations; Transport properties; Equilibrium and chemical kinetics; Thermodynamic correlations for estimating physical properties. • Use and scope of mathematical modelling; principles of model formulation; principles of steady-state and dynamic simulation; simulation of models; sequential modular approach; Equation-based approach; analysis of simulation data. • Introduction and use of process simulation software for flowchart simulation • Modelling and simulation of specific systems: e.g., heat conduction in a rod; laminar flow of Newtonian fluid in a pipe; heat exchanger; gravity tank, Power Engineering |
| Recommended Prerequisites | Physics, Mathematics, Thermodynamics |
| Mandatory Prerequisites | none |
| Forms of Teaching and Proportion | Lecture - 2 hours per week per semester Practical training - 2 hours per week per semester Self organised studies - 120 hours |

| | |
|---|---|
| Teaching Materials and Literature | <ul style="list-style-type: none">• Handouts and reading list• Manual and tutorial of the modelling programs |
| Module Examination | Final Module Examination (MAP) |
| Assessment Mode for Module Examination | <ul style="list-style-type: none">• Written examination (90 min) |

Module 13832 Optimisation in Process and Energy Systems Engineering

assign to: Compulsory Elective Modules

Study programme Environmental and Resource Management

| Degree | Module Number | Module Form |
|-------------------|---------------|---------------------|
| Master of Science | 13832 | Compulsory elective |

| | |
|---|---|
| Modul Title | Optimisation in Process and Energy Systems Engineering Optimierung in der Verfahrens- und Energiesystemtechnik |
| Department | Faculty 3 - Mechanical Engineering, Electrical and Energy Systems |
| Responsible Staff Member | Prof. Dr.-Ing. Arellano-Garcia, Harvey |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | Every winter semester |
| Credits | 6 |
| Learning Outcome | After participating in this module, the students master the basic knowledge, in terms of mathematical optimization methods and tools. Relevant examples from Energy and Process Engineering are used to enhance the understanding of the various tools and methods taught. The focus is on the formulation of the problems and the approaches for their mathematical solution. The methods covered are applied in accompanying calculation exercises. |
| Contents | <ul style="list-style-type: none"> • Introduction: Definition, problem formulation, applications • Linear programming • Non-linear programming • Mixed integer non-linear programming • Dynamic optimization • Stochastic optimization |
| Recommended Prerequisites | <ul style="list-style-type: none"> • Chemical Engineering • Thermodynamics • Process Systems Engineering |
| Mandatory Prerequisites | none |
| Forms of Teaching and Proportion | Lecture - 2 hours per week per semester Exercise - 1 hours per week per semester Self organised studies - 135 hours |
| Teaching Materials and Literature | <ul style="list-style-type: none"> • T. F. Edgar, D. M. Himmelblau, Optimization of Chemical Processes, McGraw-Hill, New York, 2001 |

Module 13833 Analysis and Modelling of Human-Environment Systems

assign to: Compulsory Elective Modules

Study programme Environmental and Resource Management

| Degree | Module Number | Module Form |
|-------------------|---------------|---------------------|
| Master of Science | 13833 | Compulsory elective |

| | |
|---|---|
| Modul Title | Analysis and Modelling of Human-Environment Systems Analyse und Modellierung von Mensch-Umwelt-Systemen |
| Department | Faculty 2 - Environment and Natural Sciences |
| Responsible Staff Member | Prof. Dr. Müller, Birgit |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | Every winter semester |
| Credits | 6 |
| Learning Outcome | Upon completing the course, students will be able to: <ul style="list-style-type: none"> • Identify key features of coupled human-environment systems and apply this knowledge to interdisciplinary case studies. • Understand core principles of complex adaptive systems. • Design, implement, and analyse agent-based models to investigate human-environment interactions. |
| Contents | <p>How do deforestation, urban expansion, or climate policies impact ecosystems and communities? Understanding these complex interactions is key to tackling today's urgent environmental challenges. This course provides an introduction to modelling human-environment systems, emphasizing the intricate feedback loops between human activities and the biophysical world—across local, regional, and global scales.</p> <p>The module has two main focus areas. First, students will explore the key characteristics of coupled socio-environmental systems. We will read and discuss interdisciplinary research papers on applied case studies and theoretical considerations and examine how models can bridge science and real-world decision-making — whether in climate change adaptation, land-use planning, or resource management. Specific topics include to understand how human behaviour is represented in models, which role play social networks and how common pool resource management can support sustainable outcomes. Guest speakers will enrich the course with diverse perspectives and practical insights.</p> <p>Second, students will acquire hands-on experience in agent-based modelling using the NetLogo programming environment designed for</p> |

beginners. They will learn how to conceptualize, build, and analyse computer models to simulate interactions within socio-environmental systems. Additionally, an introduction to statistical data analysis in R will provide essential tools for model evaluation and interpretation.

Module 13837 Agro-Ecosystems Analysis and Modelling

assign to: Compulsory Elective Modules

Study programme Environmental and Resource Management

| Degree | Module Number | Module Form |
|-------------------|---------------|---------------------|
| Master of Science | 13837 | Compulsory elective |

| | |
|---|---|
| Modul Title | Agro-Ecosystems Analysis and Modelling Analyse und Modellierung von Agrarökosystemen |
| Department | Faculty 2 - Environment and Natural Sciences |
| Responsible Staff Member | Prof. Dr. Webber, Heidi |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | Every summer semester |
| Credits | 6 |
| Learning Outcome | <ul style="list-style-type: none"> • describe and analyze agricultural systems using system analysis terms and concepts; • develop a simple dynamic model of a process affecting crop development or growth using the R programming language; • conduct model calibration, evaluation and sensitivity analysis; • design a model based assessment of the performance and sustainability of a cropping system; and • critically reflect on scientific studies reporting simulation results. |
| Contents | With the range of challenges facing crop production systems, systems analysis and simulation modelling are frequently applied analytical tools to assess improved crop management and improve understanding of how crop systems functioning. Systems approaches represent a scientific concept in which the real world is divided into systems. These systems are captured into models Applied at a range of scales (canopy, (sub-) field, agroecosystem, regional or global), they can be used as scientific tools to test hypothesis of crop behavior, informing and aiding in experimental interpretation. The course consists of three main learning areas: systems dynamics and model development; model performance & model evaluation; model applications. |
| Recommended Prerequisites | Good quantitative skills, basic knowledge of statistics, basic knowledge of scripting in R |
| Mandatory Prerequisites | none |
| Forms of Teaching and Proportion | Lecture - 2 hours per week per semester Exercise - 2 hours per week per semester |

Module 13925 Alternative Economies

assign to: Compulsory Elective Modules

Study programme Environmental and Resource Management

| Degree | Module Number | Module Form |
|-------------------|---------------|---------------------|
| Master of Science | 13925 | Compulsory elective |

| | |
|---|---|
| Modul Title | Alternative Economies Alternative Ökonomien |
| Department | Faculty 5 - Business, Law and Social Sciences |
| Responsible Staff Member | Prof. Dr. phil. Jaeger-Erben, Melanie |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | Every summer semester |
| Credits | 6 |
| Learning Outcome | Upon successful completion, students will have a solid overview on heterodox economic theories (including feminist, post-Keynesian, ecological and political economy perspectives), and understand how they differ from neoclassical economics. They are skilled in discussing and critically reflecting upon the opportunities, limitations and the applicability of different economic concepts presented in class. Students will acquire methodological skills in researching, reading and discussing academic literature. |
| Contents | The multiple crises we are currently facing – in relation to climate, biodiversity, democracy, or social inequalities – require different economic perspectives and practices. In lectures and seminars, students will learn about the limits of the dominant neoclassical paradigm and gain an overview on heterodox economic schools. They will be introduced to concepts such as degrowth, care economy, economic democracy or social entrepreneurship. At the same time, this course will critically analyse fundamental aspects of current economies, such as money, growth, profits, work or the relation to nature, and discuss practical examples of alternative economies. |
| Recommended Prerequisites | Knowledge of the contents of module • 13922 <i>Introduction to Transformation Studies</i> |
| Mandatory Prerequisites | none |
| Forms of Teaching and Proportion | Lecture - 2 hours per week per semester Seminar - 2 hours per week per semester Self organised studies - 120 hours |

Module 13957 Behavioural Economics

assign to: Compulsory Elective Modules

Study programme Environmental and Resource Management

| Degree | Module Number | Module Form |
|-------------------|---------------|---------------------|
| Master of Science | 13957 | Compulsory elective |

| | |
|---|---|
| Modul Title | Behavioural Economics Verhaltensökonomie |
| Department | Faculty 5 - Business, Law and Social Sciences |
| Responsible Staff Member | Prof. Dr. oec. habil. Schnellenbach, Jan |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | Every winter semester |
| Credits | 6 |
| Learning Outcome | After completing this module, students will be able to apply behavioural economic models to analyse individual decisions. They can integrate psychological research approaches into economic models. They can independently develop and master advanced research approaches in the field of behavioural economics and have a solid understanding of the basics of empirical, including experimental, research methods in the field of behavioural economics. Furthermore, they will be able to critically analyse and evaluate economic policy proposals with a behavioral economics perspective. |
| Contents | <ul style="list-style-type: none"> • Homo Economicus: The economic concept of human behaviour • The economic theory of moral action • Behavioural anomalies: an overview • Bounded rationality • Dealing with risk and uncertainty • Prospect theory • Heuristics: Curse or blessing? • Fairness and social norms • Economic happiness research • Behavioural political economy • Behavioural public economics |
| Recommended Prerequisites | Good knowledge of microeconomics. |
| Mandatory Prerequisites | No successful participation in the corresponding discontinued module 11814 Behavioral Economics. |
| Forms of Teaching and Proportion | Lecture - 2 hours per week per semester |

| | |
|---|--|
| | Exercise - 2 hours per week per semester Self organised studies - 120 hours |
| Teaching Materials and Literature | Foundational literature: <ul style="list-style-type: none">• Angner, E. (2012). A Course in Behavioral Economics, Houndmills: Palgrave Macmillan.• Additional literature will be announced during the lecture. In the exercise: <ul style="list-style-type: none">• Wilkinson, N. and Klaes, M. (2012), An Introduction to Behavioral Economics. 2nd edition, Houndmills: Palgrave Macmillan. |
| Module Examination | Continuous Assessment (MCA) |
| Assessment Mode for Module Examination | <ul style="list-style-type: none">• Term paper with a maximum of 15.000 characters incl. spaces (roughly 6 pages), 50 points• Final exam, 40 minutes, 50 points. |
| Evaluation of Module Examination | Performance Verification – graded |
| Limited Number of Participants | none |
| Remarks | This module is a successor module to the module „Behavioral Economics (11814)". Students who have already passed the module cannot take the module "Behavioral Economics (13957)" again. |
| Module Components | Behavioral Economics (Lecture) Behavioral Economics (Exercise) |
| Components to be offered in the Current Semester | No assignment |

Module 13958 Economics of Innovation

assign to: Compulsory Elective Modules

Study programme Environmental and Resource Management

| Degree | Module Number | Module Form |
|-------------------|---------------|---------------------|
| Master of Science | 13958 | Compulsory elective |

| | |
|---|---|
| Modul Title | Economics of Innovation Innovationsökonomik |
| Department | Faculty 5 - Business, Law and Social Sciences |
| Responsible Staff Member | Prof. Dr. oec. habil. Schnellenbach, Jan |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | Each winter semester even year |
| Credits | 6 |
| Learning Outcome | Students will understand how innovation can be explained from a microeconomic perspective. They will know the economic, institutional, and psychological prerequisites for entrepreneurial innovation. Upon successful completion of the module, students will be able to critically assess under which circumstances innovative entrepreneurial actions are positively evaluated and potentially eligible for economic policy support. |
| Contents | Innovation in the history of economic theory; Types of innovation; Competition and innovation; Organizational aspects of innovation; Political and institutional prerequisites for innovation; Diffusion of innovations; Innovation and economic growth; Innovations and societal welfare. |
| Recommended Prerequisites | Good knowledge of microeconomics. |
| Mandatory Prerequisites | none |
| Forms of Teaching and Proportion | Lecture - 2 hours per week per semester Exercise - 2 hours per week per semester Self organised studies - 120 hours |
| Teaching Materials and Literature | G.M. Swann, The Economics of Innovation: An Introduction, Elgar, 2013 as well as additional articles and book chapters announced during the lecture |
| Module Examination | Continuous Assessment (MCA) |

| | |
|---|--|
| Assessment Mode for Module Examination | <ul style="list-style-type: none">• Term paper with a maximum of 15,000 characters including spaces (equivalent to approximately 6 pages); (50%)• Exam, 40 minutes, which can also be conducted digitally (50%) |
| Evaluation of Module Examination | Performance Verification – graded |
| Limited Number of Participants | none |
| Remarks | No offer in the winter semester 2025/26. |
| Module Components | Innovation Economics Lecture - 2 hours per week Innovation Economics Exercise - 2 hours per week |
| Components to be offered in the Current Semester | No assignment |

Module 13959 Law and Economics

assign to: Compulsory Elective Modules

Study programme Environmental and Resource Management

| Degree | Module Number | Module Form |
|-------------------|---------------|---------------------|
| Master of Science | 13959 | Compulsory elective |

| | |
|---|--|
| Modul Title | Law and Economics |
| | Recht und Wirtschaft |
| Department | Faculty 5 - Business, Law and Social Sciences |
| Responsible Staff Member | Prof. Dr. oec. habil. Schnellenbach, Jan |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | Each winter semester odd year |
| Credits | 6 |
| Learning Outcome | Students will gain an overview of the field of economic analysis of law, which involves analyzing legal rules from the perspective of economic theory. It focuses on the interaction of legal norms with the actions of private households and companies, as well as the impact of constitutional law on government actions. Students should learn to analyze legal norms in terms of their efficiency and economic effects, including microeconomic efficiency, as well as growth and distribution effects. They should also be able to assess why specific legal norms have developed historically as we know them today. |
| Contents | <ol style="list-style-type: none"> 1. Fundamentals of the theory of private property rights <ol style="list-style-type: none"> a) Historical development of private property b) Theories of the emergence of private property rights c) Economic analysis of common-pool resources d) Property rights in intangible assets 2. Economic analysis of contract law <ol style="list-style-type: none"> a) Complete and incomplete contracts b) Moral hazard and adverse selection c) Efficient responses to contract breaches 3. Economic analysis of tort law <ol style="list-style-type: none"> a) The Coase theorem b) Economic analysis of liability rules 4. Economic analysis of criminal law <ol style="list-style-type: none"> a) Differentiating between tort law and criminal law b) Deterrence effects of criminal law c) Optimal deterrence effects 5. Constitutional economics <ol style="list-style-type: none"> a) Fundamentals of the economic theory of public law |

b) Empirical analysis of the economic effects of constitutional rules

| | |
|---|---|
| Recommended Prerequisites | Basic knowledge of microeconomics |
| Mandatory Prerequisites | none |
| Forms of Teaching and Proportion | Lecture - 2 hours per week per semester Exercise - 2 hours per week per semester Self organised studies - 120 hours |
| Teaching Materials and Literature | H. Schäfer and C. Ott, Lehrbuch der ökonomischen Analyse des Zivilrechts, 5th edition, Heidelberg: Springer, 2012 Additional articles and book chapters announced during the lecture |
| Module Examination | Continuous Assessment (MCA) |
| Assessment Mode for Module Examination | <ul style="list-style-type: none">• Term paper with a maximum of 15,000 characters including spaces (equivalent to approximately 6 pages); (50% of the total grade)• Exam, 40 minutes (50% of the total grade) |
| Evaluation of Module Examination | Performance Verification – graded |
| Limited Number of Participants | none |
| Remarks | None |
| Module Components | Law & Economics Lecture - 2 hours per week Law & Economics Exercise - 2 hours per week |
| Components to be offered in the Current Semester | No assignment |

Module 14069 Biomass and Bioenergy

assign to: Compulsory Elective Modules

Study programme Environmental and Resource Management

| Degree | Module Number | Module Form |
|-------------------|---------------|---------------------|
| Master of Science | 14069 | Compulsory elective |

| | |
|---|--|
| Modul Title | Biomass and Bioenergy Biomasse und Bioenergie |
| Department | Faculty 5 - Business, Law and Social Sciences |
| Responsible Staff Member | Prof. Dr. phil. Hirschl, Bernd |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | Every semester |
| Credits | 6 |
| Learning Outcome | Students are able to understand the multifunctionality of biomass and know the various pathways of biomass conversion into energy. They are prepared to have critical knowledge regarding biomass cultivation for energy generation by discussing social and environmental concerns, like land use or the competition with food chains. After attending the module, students have expertise in interpreting and presenting scientific texts. |
| Contents | Sustainable energy generation is seen as one of the largest present challenges of our society. The module "Biomass and Bioenergy" will discuss climate neutral energy systems, where biomass is a sustainable carbon neutral source of energy. This module is highly interdisciplinary. Topics will include: <ul style="list-style-type: none"> • Overview on biomass production (agriculture and forestry) • Biomass residual waste • Energy conversion technologies • Social and ecological aspects of biomass use • Current bioenergy policies |
| Recommended Prerequisites | none |
| Mandatory Prerequisites | none |
| Forms of Teaching and Proportion | Seminar - 4 hours per week per semester Self organised studies - 120 hours |
| Teaching Materials and Literature | The following literature can be used for preparation: <ul style="list-style-type: none"> • Book: Kaltschmitt, M., ed. (2018) Energy from Organic Materials (Biomass). A Volume in the Encyclopedia of Sustainability |

Agroindustrial Waste for Green Fuel Application. Springer DOI:https://doi.org/10.1007/978-981-19-6230-1• Journal "Biomass and Bioenergy" (Elsevier)• Journal "Sustainable Energy Technologies and Assessments" (Elsevier) |
| Module Examination | Prerequisite + Final Module Examination (MAP) |
| Assessment Mode for Module Examination | Prerequisite: <ul style="list-style-type: none">• Presentation (15 minutes + discussion) Final Module Examination: <ul style="list-style-type: none">• Written exam, 120 min |
| Evaluation of Module Examination | Performance Verification – graded |
| Limited Number of Participants | none |
| Remarks | Not offered in summer semester 2026 . |
| Module Components | <ul style="list-style-type: none">• Seminar: Biomass and Bioenergy• Examination: Biomass and Bioenergy |
| Components to be offered in the Current Semester | 538909 Examination Biomass and Bioenergy (Wiederholungsprüfung) |

Module 14132 Multidimensional Approaches for Technology Assessment

assign to: Compulsory Elective Modules

Study programme Environmental and Resource Management

| Degree | Module Number | Module Form |
|-------------------|---------------|---------------------|
| Master of Science | 14132 | Compulsory elective |

| | |
|---|--|
| Modul Title | Multidimensional Approaches for Technology Assessment Multidimensionale Ansätze für Technikfolgenabschätzung |
| Department | Faculty 5 - Business, Law and Social Sciences |
| Responsible Staff Member | Prof. Dr. rer. pol. habil. Lee, Roh Pin |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | Every summer semester |
| Credits | 6 |
| Learning Outcome | <p>Students know about a range of technology assessment approaches, methodologies and tools to facilitate the evaluation of decarbonization & sustainability transformation options along socio-technological-economical-ecological-political (<i>STEEP</i>) dimensions.</p> <p>On completion of the module, students are able to:</p> <ul style="list-style-type: none"> • Demonstrate a deep understanding of the multidimensional aspects and systemic interactions in the transformation of energy- and carbon-intensive industries; • Gain familiarity with a range of qualitative and quantitative methodologies in conducting technology assessment; • Design and conduct studies to analyze the opportunities and challenges which will be associated with the transformation of energy- and carbon-intensive industries along multiple dimensions; • Identify, assess and evaluate appropriate sources of information and critically reflect on the methodologies commonly implemented for technology assessment and their usefulness/weaknesses. |
| Contents | <p>Course coverage:</p> <ul style="list-style-type: none"> • Relevance and development of technology assessment; • Common methodological approaches and their usefulness/weakness; • Data and approaches for assessment (e.g., primary vs. secondary; qualitative vs. quantitative); • Methodologies for socio-political evaluations, techno-economic evaluations and ecological evaluations; • Application on a case study to assess multidimensional opportunities and challenges associated with the transformation of a specific sector |

| | |
|---|--|
| | and derive implications along the <i>STEEP</i> dimensions based on assessment results. |
| Recommended Prerequisites | none |

Module 14288 Psychology of Entrepreneurship and Change

assign to: Compulsory Elective Modules

Study programme Environmental and Resource Management

| Degree | Module Number | Module Form |
|-------------------|---------------|---------------------|
| Master of Science | 14288 | Compulsory elective |

| | |
|---|---|
| Modul Title | Psychology of Entrepreneurship and Change Psychologie des Unternehmertums und Wandels |
| Department | Faculty 5 - Business, Law and Social Sciences |
| Responsible Staff Member | Prof. Dr. Urbig, Diemo |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | Every winter semester |
| Credits | 6 |
| Learning Outcome | After completing this module, students will understand how basic psychological theories of decision making under uncertainty, complex interdependence, and intertemporal dynamics help explain the behavior of individuals who drive change, such as entrepreneurs, innovators and social activists. They will have developed a basic understanding of key psychological and behavioral economic theories related to decision-making under risk and ambiguity. Identify and explain critical thinking and decision-making patterns in the work context. Students will be able to apply theories to real-world situations. |
| Contents | In this module, we venture into the specifics of a wide range of decision-making theories. We travel through a diverse collection of seminal theories, including many that have formed the basis of Nobel Prize-winning research. We emphasize the interdisciplinary application of insights to ensure that students from a variety of disciplines can absorb and apply the knowledge gained in this module to their own professional decision-making scenarios. The literature is presented in the lecture and students can afterwards read the literature in depth. The topics include: <ul style="list-style-type: none"> • Satisficing and dual process theories • Risk aversion and ambiguity aversion • Prospect theory and loss aversion • Mental accounting and choice bracketing • Risk reduction strategies: Hedging, learning, and real options • Time preferences • Status-quo, escalation of commitment, and the not-invented-here effect |

- Personal initiative, sensation seeking, and entrepreneurship
- Rational herding and individually irrational learning
- Nash equilibrium and individually irrational cooperation

The concepts and theories are presented in lectures.
Students practice their theory application skills by presenting and discussing critical issues and applications of these theories in seminar.

Module 14299 Advances in Biogeochemistry and Pedology

assign to: Compulsory Elective Modules

Study programme Environmental and Resource Management

| Degree | Module Number | Module Form |
|-------------------|---------------|---------------------|
| Master of Science | 14299 | Compulsory elective |

| | |
|---|--|
| Modul Title | Advances in Biogeochemistry and Pedology Aktuelle Forschungen in Biogeochemie und Bodenkunde |
| Department | Faculty 2 - Environment and Natural Sciences |
| Responsible Staff Member | Prof. Dr. phil. Raab, Thomas Prof. Ph. D. Rütting, Louise |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | On special announcement |
| Credits | 6 |
| Learning Outcome | Students will learn scientific method application, hypothesis formulation, critical reflection of results and academic discussion in fields of Soil-Plant-Systems and Geopedology. |
| Contents | Recent developments in the field of soil-ecosystem-landscape related research. Invited external speakers, as well as BTU PostDocs, PhD and Master students, present advances in scientific investigations in natural and human-made ecosystems. The focus is on the evolution, properties, and functions of the pedosphere and interacting processes with the biosphere. Research topics cover soil organic matter, biogeochemistry, plant nutrient uptake, stable isotope tracing, phosphorus and nitrogen cycling, soils in space and time, soil morphology and classification, and the impact of past and modern land use on soil landscapes. |
| Recommended Prerequisites | Basic knowledge in Biogeochemistry and Soil Science |
| Mandatory Prerequisites | none |
| Forms of Teaching and Proportion | Seminar - 2 hours per week per semester Consultation - 2 hours per week per semester Self organised studies - 120 hours |
| Teaching Materials and Literature | will be announced at the beginning of the event |
| Module Examination | Continuous Assessment (MCA) |
| Assessment Mode for Module Examination | Students must write a series of short tests at the end of each seminar presentation (25 % of the module grade), they must ask weekly |

questions on each seminar topic (25 % of the module grade) and they must give a short poster presentation (5 minutes) at the end of the seminar (50 % of the module grade).

Module 14462 Lightweight and Active Structures

assign to: Compulsory Elective Modules

Study programme Environmental and Resource Management

| Degree | Module Number | Module Form |
|-------------------|---------------|---------------------|
| Master of Science | 14462 | Compulsory elective |

| | |
|---|---|
| Modul Title | Lightweight and Active Structures Leichte und Aktive Tragwerke |
| Department | Faculty 6 - Architecture, Civil Engineering and Urban Planning |
| Responsible Staff Member | Prof. Dr.-Ing. Bleicher, Achim |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | On special announcement |
| Credits | 6 |
| Learning Outcome | Knowledge / Skills: Bringing together theories, methods and tools from different fields for the optimal design of lightweight and active structures. Competencies: After successful participation in the module, students are able to design, model, optimize and simulate simple lightweight and active structures. The contents of the module are applied by working with the simulation software Sofistik and Matlab/ Simulink. |
| Contents | <ul style="list-style-type: none"> • Lightweight design principles • Concepts and Mechanisms for moveable and active structures • Optimization of lightweight structures • Systems for vibration control • Modeling and simulation of simple active structures as a basis for the design of adaptronic systems • Design of adaptronic systems (sensors, actuators, control) |
| Recommended Prerequisites | Vorgespannte Tragwerke (11694) Schwingungsanfällige Tragwerke (23503) |
| Mandatory Prerequisites | none |
| Forms of Teaching and Proportion | Lecture - 1 hours per week per semester Seminar - 1 hours per week per semester Consultation - 1 hours per week per semester Self organised studies - 135 hours |

Module 14506 Advanced Geophysical Methods in Natural Resource Investigation (ANRI)

assign to: Compulsory Elective Modules

Study programme Environmental and Resource Management

| Degree | Module Number | Module Form |
|-------------------|---------------|---------------------|
| Master of Science | 14506 | Compulsory elective |

| | |
|---|---|
| Modul Title | Advanced Geophysical Methods in Natural Resource Investigation (ANRI) Fortgeschrittene geophysikalische Methoden zur Erkundung natürlicher Ressourcen |
| Department | Faculty 2 - Environment and Natural Sciences |
| Responsible Staff Member | Prof. Dr. rer. nat. Herd, Rainer |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | Every semester |
| Credits | 6 |
| Learning Outcome | Understand advanced geophysical methods for subsurface exploration. Gain practical skills in applying geophysical methods in real fieldwork scenarios, including magnetometry, ground-penetrating radar (GPR), electrical resistivity tomography (ERT), and electromagnetics for data acquisition and interpretation Learn to process and interpret geophysical data including airborne data. Develop expertise in using specialized software. Evaluate the efficiency of different geophysical methods in various field conditions. Analyze and mitigate common issues encountered during geophysical surveys. |
| Contents | Lecture: The lecture component of this course will provide an overview of advanced geophysical investigation methods used in subsurface exploration. It will cover the principles of magnetometry, ground-penetrating radar (GPR), geoelectrics and electromagnetic methods, along with an introduction to radiometry and its applications in natural resource exploration. Students will learn about data acquisition techniques for both ground and airborne geophysical surveys, and explore the challenges associated with data interpretation. Additionally, the lecture will address typical workflows used in the processing of geophysical data to ensure accurate results. Practical Training: |

The practical training component will focus on providing hands-on experience in fieldwork, utilizing magnetometry, GPR, geoelectric, electromagnetic instruments. Students will actively participate in data acquisition and analysis using specialized software. They will gain experience in processing, and learn how to apply these methods effectively in real exploration scenarios. Practical training will also include the development of field reports and presentations based on data collected during field activities, helping students to refine their skills in communicating technical results.

Module 14726 Mathematical Optimization Techniques and Applications

assign to: Compulsory Elective Modules

Study programme Environmental and Resource Management

| Degree | Module Number | Module Form |
|-------------------|---------------|---------------------|
| Master of Science | 14726 | Compulsory elective |

| | |
|---|---|
| Modul Title | Mathematical Optimization Techniques and Applications Mathematische Optimierungstechniken und Anwendungen |
| Department | Faculty 1 - Mathematics, Computer Science, Physics, Electrical Engineering and Information Technology |
| Responsible Staff Member | Prof. Dr. rer. nat. habil. Fügenschuh, Armin |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | Every winter semester |
| Credits | 6 |
| Learning Outcome | Upon successful completion of the module, students will have acquired an understanding of core mathematical tools used in modern optimization. They will be able to identify optimization structures in real-world problems, formalize these problems in mathematical terms, and apply suitable algorithms to obtain and interpret solutions. |
| Contents | Foundations of optimization theory, global vs. local optimality, geometry of optimization, optimization for graph problems, fundamentals of linear programming, duality principles, advanced simplex methods, discrete optimization, interior point and ellipsoid methods, nonlinear optimization, applied modeling. Emphasis is placed both on theoretical insights and algorithmic implementation. |
| Recommended Prerequisites | Knowledge of subject matters of the modules <ul style="list-style-type: none"> • 11103: Analysis I • 11104: Analysis II • 11101: Lineare Algebra und analytische Geometrie I or of the modules <ul style="list-style-type: none"> • 11112: Mathematik IT-1 (Diskrete Mathematik) • 11113: Mathematik IT-2 (Lineare Algebra) • 11213: Mathematik IT-3 (Analysis) |

Module 14824 Automated biodiversity surveying tools and methods

assign to: Compulsory Elective Modules

Study programme Environmental and Resource Management

| Degree | Module Number | Module Form |
|-------------------|---------------|---------------------|
| Master of Science | 14824 | Compulsory elective |

| | |
|---|--|
| Modul Title | Automated biodiversity surveying tools and methods Automatisierte Instrumente und Methoden zur Erfassung der biologischen Vielfalt |
| Department | Faculty 2 - Environment and Natural Sciences |
| Responsible Staff Member | Prof. Dr. rer. nat. Beckmann, Michael |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | Every winter semester |
| Credits | 6 |
| Learning Outcome | By the end of this course, students will be able to: - Demonstrate knowledge of the principles and methods of surveying different aspects of biodiversity. - Apply key concepts of survey design to ecological studies. - Apply AI tools (e.g. Birdnet) to automatically classify species from recordings Practical learning outcomes - Design a biodiversity survey for a given taxa using automated monitoring tools, from setup through data collection and analysis to scientific presentation. - Give a presentation on the proposed biodiversity study, including a background on the chosen taxon and region and justification of the experimental design. |
| Contents | This course combines lectures and hands-on sessions (with automated monitoring devices such as Audiomoth and InsectDetect) in groups to provide a basic introduction to the different methods used to survey and monitor biodiversity. These lectures and hands-on sessions introduce the students to the most common (and some emerging) methods to survey terrestrial biodiversity. This should provide students with a basic understanding of the methods they might use in future industrial (e.g. ecological consultancy) or research work. This includes methods such as audio recording of bats and birds, insect monitoring with pan traps and pitfall traps or camera trapping for larger mammals. The advantages, disadvantages and challenges of each method will be introduced. |

| | |
|---|--|
| | Practical examples using audio recorders (including deployment and data analysis) will be undertaken. |
| Recommended Prerequisites | Basic knowledge of ecology |
| Mandatory Prerequisites | None |
| Forms of Teaching and Proportion | Lecture - 1 hours per week per semester Excursion - 15 hours Self organised studies - 150 hours per week per semester |
| Teaching Materials and Literature | Teaching materials will be uploaded in Moodle. Module 14827 Forest Change Ecology and Research Fundamentals

assign to: Compulsory Elective Modules

Study programme Environmental and Resource Management

| Degree | Module Number | Module Form |
|-------------------|---------------|---------------------|
| Master of Science | 14827 | Compulsory elective |

| | |
|---|--|
| Modul Title | Forest Change Ecology and Research Fundamentals Ökologie des Waldes und Grundlagen der Forschung |
| Department | Faculty 2 - Environment and Natural Sciences |
| Responsible Staff Member | Dr. Ibáñez, Theresa Simona |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | Every winter semester |
| Credits | 6 |
| Learning Outcome | <p>By the end of this course, students will be able to:</p> <p>Theoretical learning outcomes</p> <ul style="list-style-type: none"> - Demonstrate knowledge of forest disturbance ecology, with a particular focus on wildfire impacts, forest regeneration processes, and climate change effects. - Evaluate how forest management practices in Europe influence ecological regeneration and nutrient cycling under changing climate conditions. - Understand the principles of scientific communication. - Apply key concepts of experimental design to ecological studies. <p>Practical learning outcomes</p> <ul style="list-style-type: none"> - Collaborate in small groups to perform all aspects of experimental work, from setup through data collection and analysis to scientific presentation. - In group develop and communicate research ideas by during a workshop session designing a small hypothetical experiment, including a <p>Page 2 of 5</p> <ul style="list-style-type: none"> - research question, hypotheses, experimental design. - Interpret and apply basic statistical methods commonly used in ecological research. |
| Contents | <p>This course combines lectures, seminars, workshops, and hands-on experiments in group to provide a comprehensive understanding of forest ecology and scientific research methods. The course is structured around the following key components:</p> |

Lectures (followed by short multi- option quiz):

Lecture series on disturbance ecology and the impacts of climate change on forest regeneration and nutrient cycling

These lectures explore how various ecological disturbances and changing climatic conditions affect forest regeneration and nutrient cycling. The lectures cover both natural and human-induced disturbances (e.g., wildfire, forest management), examining their individual and combined impacts on forest ecosystems.

Special

emphasis is placed on understanding how climate change influences the frequency, intensity, and

ecological consequences of various disturbances. The lectures integrate theory with current

research to highlight the complex interactions between disturbance regimes, forest recovery, and nutrient dynamics.

Experimental design and statistical analysis

Core principles of designing ecological experiments and applying basic statistical tests (e.g., ANOVA, linear regression, correlation).

Scientific communication

Basic understanding of how to write and communicate research.

Practical Components

Practical experiment (each student chooses one of the two following experiments):

1. Greenhouse experiment- drought impact on seedling growth (2 groups with 4 students in each group)

One tree species (*P. sylvestris* or *Betula*) x 2 drought treatments x 4 replicates, total 8 pots. The course leader will pre-germinate the seeds. Students then plant and maintain the experiment during a couple of weeks. Seedlings are harvested, above and belowground biomass and aboveground height are obtained. Statistical tests are performed, followed by a written report of maximum 5 pages (excluding references), structured as a scientific paper and presented in class. Supporting paper: Ibáñez et al., 2022.

2. LICOR Soil respiration experiment- variances of soil moisture and temperature impact on soil respiration (2 groups with 4 students in each group).

Students, together with the course leader, install five collars on campus and measure, over a gradient, soil respiration, temperature and moisture. Statistical tests are performed, followed by a written report of maximum 5 pages (excluding references), structured as a scientific paper and presented in class. Supporting paper: Kelley et al., 2022.

Workshop in experimental design

Workshop session: Each group of 2-3 students will, after introduction, design a small hypothetical ecological experiment comprising a research question, hypotheses, experimental design. Presented and discussed by the end of the workshop in class.

Supporting literature includes textbooks and recent peer-reviewed papers relevant to each experimental activity.

Recommended Prerequisites

Basic knowledge of forest ecology

Mandatory Prerequisites

None

Module 14828 Isotopes in Environmental Science

assign to: Compulsory Elective Modules

Study programme Environmental and Resource Management

| Degree | Module Number | Module Form |
|-------------------|---------------|---------------------|
| Master of Science | 14828 | Compulsory elective |

| | |
|---|---|
| Modul Title | Isotopes in Environmental Science Isotopen in Umweltwissenschaften |
| Department | Faculty 2 - Environment and Natural Sciences |
| Responsible Staff Member | Dr. rer. nat. Rütting, Tobias |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | Every winter semester |
| Credits | 6 |
| Learning Outcome | Lectures and textbook reading: the students will be familiar with the major stable isotopes of carbon, nitrogen, oxygen and hydrogen used in studies of Environmental Science. They understand fractionation and mixing processes, the use of stable isotopes as tracers in process studies, and they have knowledge on instrumentation and standards. Exercises: the students are able to plan and conduct a project using stable isotopes, including data analysis. Seminar: The students understand the structure of scientific publications and are able to critically analyze and evaluate research results. |
| Contents | The course offers a broad introduction to the use of stable isotopes (SI) in Environmental Science. Basic knowledge on terminology, fractionation processes, isotope mixing, instrumentation and standards. The topics covered are plants and photosynthesis; atmosphere and greenhouse gases; soil nutrient cycles; water isotopes in the landscape. Selected aspects will be further explored in the accompanying seminar using scientific publications and orally presented by the students. |
| Recommended Prerequisites | Chemistry I: General and Inorganic Chemistry Or equivalent |
| Mandatory Prerequisites | none |
| Forms of Teaching and Proportion | Lecture - 2 hours per week per semester Exercise - 2 hours per week per semester Self organised studies - 120 hours |

Module 14872 Design Science in Entrepreneurship and Management

assign to: Compulsory Elective Modules

Study programme Environmental and Resource Management

| Degree | Module Number | Module Form |
|-------------------|---------------|---------------------|
| Master of Science | 14872 | Compulsory elective |

| | |
|---|---|
| Modul Title | Design Science in Entrepreneurship and Management Designwissenschaft in Unternehmertum und Management |
| Department | Faculty 5 - Business, Law and Social Sciences |
| Responsible Staff Member | Prof. Dr. phil. Scheidgen, Katharina |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | Every semester |
| Credits | 6 |
| Learning Outcome | <p>Successfully completing this course means, students will be able to apply design science in both scientific and practical projects. They will understand how design science differs from traditional explanatory research and know how to develop practical, research-based solutions to pressing challenges.</p> <p>Students will be able to identify design problems worth solving and use qualitative methods such as interviews to understand real-world problems. Based on this, they will be able to derive design requirements and create useful solutions, such as tools, processes, or frameworks. They will be competent in how to co-design these solutions with relevant stakeholders as well as how to evaluate these solutions.</p> |
| Contents | <p>The course <i>Design Science in Entrepreneurship and Management</i> introduces students to an innovative, impact-oriented approach that bridges academic theorizing with real-world problem solving. Design science is a problem-solving and scientific research approach that focuses on designing and evaluating solutions to pressing, complex problems. Unlike traditional academic research, which typically aims to understand and explain phenomena (“how and why” things happen), design science aims to shape and improve reality, answering “how can” and “how should things be” questions.</p> <p>The students will work in small teams and engage with a real-world problem. This problem will be introduced through a design brief, which outlines the problem they are asked to solve. Each team will plan and conduct their own design science mini-project. They will derive design requirements, that are, insights into what a solution must achieve in order to be useful. Based on these design requirements, they will co-create artifacts and evaluate them. Drawing on both their</p> |

artifact evaluation and academic literature, students will formulate design principles, that are, prescriptive knowledge that explains how to change an existing situation into a preferred one. Throughout their project, students will engage with relevant stakeholders to collect data, for example to understand the problem better or evaluate their solutions. The results of the project will be presented in two formats: a written report and an oral presentation.

By completing their own mini design science projects, students will gain hands-on experience in planning and conducting such projects. They will also learn how to communicate with relevant stakeholders, both in written reports and in oral presentations.

| | |
|---|--|
| Recommended Prerequisites | <ul style="list-style-type: none"> • Experience in reading and engaging with academic literature as well as • an interest in problem-solving are advantageous. • Basic knowledge of qualitative approaches such as case studies are helpful. |

Module 14874 An Introduction to Basic Algorithms to Solve Environmental and Resource Management Optimization Problems

assign to: Compulsory Elective Modules

Study programme Environmental and Resource Management

| Degree | Module Number | Module Form |
|-------------------|---------------|---------------------|
| Master of Science | 14874 | Compulsory elective |

| | |
|---|--|
| Modul Title | An Introduction to Basic Algorithms to Solve Environmental and Resource Management Optimization Problems |
| | Eine Einführung in grundlegende Algorithmen zur Lösung von Optimierungsproblemen im Umwelt- und Ressourcenmanagement |
| Department | Faculty 2 - Environment and Natural Sciences |
| Responsible Staff Member | Dr. rer. nat. Sturm, Astrid-Utte |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | Every winter semester |
| Credits | 6 |
| Learning Outcome | <p>After participating in the module, students should</p> <ul style="list-style-type: none"> • have a basic understanding of programming principles, • have a basic understanding of graphs and graph algorithm • be able to identify optimization problems in the field of environmental and research management and • be able to match real world optimization problems to introduced algorithmic solutions. |
| Contents | <p>An introduction to basic algorithms which can be used for typical optimization problems in environmental and research management. For example, where to place wind turbines in a given landscape while optimizing given parameters e.g. maximizing energy generation or minimizing biodiversity disturbance. We start with a short introduction / refresher of basic programming principles and focus during the course on understanding and enabling the use of existing algorithms as graph algorithms or when to use other approximation algorithms like greedy. All algorithms are introduced and discussed in the context of environmental and resource related optimization problems.</p> <ol style="list-style-type: none"> 1. Basic programming principles 2. Graph algorithms 3. Greedy algorithms 4. Knapsack problem 5. Dynamic Programming 6. Simulated Annealing |

Module 14888 Invasion Ecology

assign to: Compulsory Elective Modules

Study programme Environmental and Resource Management

| Degree | Module Number | Module Form |
|-------------------|---------------|---------------------|
| Master of Science | 14888 | Compulsory elective |

| | |
|---|---|
| Modul Title | Invasion Ecology Invasionsökologie |
| Department | Faculty 2 - Environment and Natural Sciences |
| Responsible Staff Member | Prof. Dr. rer. nat. Beckmann, Michael |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | Every summer semester |
| Credits | 6 |
| Learning Outcome | <p>By the end of this course, students will be able to:</p> <ul style="list-style-type: none"> - Explain key concepts and definitions in invasion ecology, including distinctions between native, non-native, and invasive species. - Describe major pathways, stages, and mechanisms of biological invasions across terrestrial and aquatic ecosystems. - Summarize and compare central hypotheses and theoretical frameworks in invasion ecology from both invader and recipient community perspectives. - Analyze case studies of novel interactions between invasive and native species, including plant–insect, host–parasite, and predator–prey systems. - Evaluate ecological and socio-economic impacts of invasive species using empirical evidence. - Assess and compare management strategies for invasive species, including prevention, monitoring, risk assessment, and biological control. |
| Contents | This module introduces invasion ecology as a key field addressing the ecological, evolutionary, and socio-economic consequences of species |

introductions. It covers pathways and stages of biological invasions, definitions and classifications of invasive species, and major invasion hypotheses from both invader and recipient community perspectives. The course examines invasive species across terrestrial, freshwater, and marine ecosystems, with a focus on their impacts on biodiversity, ecosystem functioning, and human well-being. Special emphasis is placed on novel species interactions, including plant–insect, host–parasite, and predator–prey systems, and on evolutionary processes shaping invasions. Through lectures and case-study-based group projects, students engage with predictive models, risk assessment protocols, and management strategies such as eradication, monitoring, and biological control. The module also critically discusses potential benefits of introduced species and future challenges under global environmental change.

Module 41404 Strategic Environmental Assessment and Environmental Impact Assessment

assign to: Compulsory Elective Modules

Study programme Environmental and Resource Management

| Degree | Module Number | Module Form |
|-------------------|---------------|---------------------|
| Master of Science | 41404 | Compulsory elective |

| | |
|---|---|
| Modul Title | Strategic Environmental Assessment and Environmental Impact Assessment |
| Department | Strategische Umweltprüfung und Umweltverträglichkeitsprüfung Faculty 2 - Environment and Natural Sciences |
| Responsible Staff Member | Prof. Dr. Dr.h.c. (NMU, UA) Schmidt, Michael |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | Every winter semester |
| Credits | 6 |
| Learning Outcome | <p>Environmental Impact Assessment (EIA) After completing the module, the students will be able:</p> <ul style="list-style-type: none"> • to compare the origins and development of EIA in the USA, Europe and worldwide; • to critically review the EIA process, explaining its various steps; • to select appropriate impact identification and prediction methods for the use within the EIA process. <p>Strategic Environmental Assessment (SEA) After completing the module, the students will be able:</p> <ul style="list-style-type: none"> • to understand the key principles, procedure and application of SEA; • to discuss SEA as a policy instrument and a way to improve strategic actions; • to explore benefits and barriers to a successful SEA; • to highlight the links and differences between SEA and Project EIA; • to understand the importance of strategic objectives and their alternatives at SEA level. |
| Contents | <p>The contents of lectures will be discussed in more detail and applied to different case studies during seminars. While the lecture provides theoretical background, the seminars utilise a more practice-oriented approach. Students will apply various methods explained during the lectures with the help of relevant case studies.</p> <p>Environmental Impact Assessment (EIA)</p> <ul style="list-style-type: none"> • The history and development of EIA in the USA and the European Union |

- The legal context of EIA (NEPA and the European Union EIA Directive)
- The EIA process – screening, scoping, environmental baseline, impact assessment, environmental impact statement (EIS) and its review, public participation, decision making and monitoring
- Methods used for identification of impacts and assessing their significance (checklists, matrices, networks, map overlays etc.)

Strategic Environmental Assessment (SEA)

- Basic concept and understanding of SEA, its benefits and importance for transition towards sustainability
- The objectives and implementation of the EC's SEA Directive 2001/42/EC
- The differences and similarities between EIA and SEA
- The SEA procedure and its integration into the process of planning

Recommended Prerequisites

None

Mandatory Prerequisites

none

Forms of Teaching and Proportion

Lecture - 2 hours per week per semester
Seminar - 2 hours per week per semester
Self organised studies - 120 hours

Teaching Materials and Literature

Lecture notes and presentations shown during seminars will be available for downloading from the BTU Moodle learning portal. For students interested in more in-depth study of lecture topics, optional advanced readings will be regularly uploaded to the BTU elearning portal Moodle.

Recommended Journals:

- Environmental Impact Assessment Review published by Elsevier
- Impact Assessment and Project Appraisal published by the International Association for Impact Assessment (IAIA)

Both journals are electronically available to all BTU students at the following web pages:

- <http://www.sciencedirect.com/science/journal/01959255>
- <https://www.tandfonline.com/loi/tiap20>

N.B.: to get full access for articles, these web pages have to be accessed from within BTU network or with the help of a VPN-Client.

Environmental Impact Assessment – recommended readings:

Module 41406 Environmental Modelling

assign to: Compulsory Elective Modules

Study programme Environmental and Resource Management

| Degree | Module Number | Module Form |
|-------------------|---------------|---------------------|
| Master of Science | 41406 | Compulsory elective |

| | |
|---|--|
| Modul Title | Environmental Modelling Umweltmodellierung |
| Department | Faculty 2 - Environment and Natural Sciences |
| Responsible Staff Member | Prof. Dr. rer. nat. Hinz, Christoph |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | Every summer semester |
| Credits | 6 |
| Learning Outcome | <p>Part 1 Introduction Modelling of the Environment: The lecture aims at providing basic understanding of dynamical modeling of the environment. Basic concepts of systems analysis will be introduced. In particular the students will get familiar with basic concepts of modeling of Atmo-, Hydro-, Bio- and Pedosphere, learn about the relevant processes, main interactions, model sensitivities and uncertainties.</p> <p>Part 2 Environmental modeling exercises: In the numerical exercise the students will learn writing simplified models and apply more complex and state of the art numerical models of selected processes or subsystems of the environment. They will learn, how to analyse and to interpret the results. They will get familiar with multiprocessor computers and with the computational needs of environmental modelling.</p> |
| Contents | <p>Part 1 Introduction to Modelling of the Environment: An introduction to modeling of the environment will be given. Concepts of modeling of the Atmo-, Hydro-, Bio- and Pedosphere will be presented. In particular the identification of relevant processes within and interactions between the spheres and their modeling will be highlighted. The opportunities of making predictions will be demonstrated by application to environmental problems like hazards, climate change and pollution. The model sensitivities and uncertainties will be discussed.</p> <p>Part 2 Environmental modeling exercises: Each student gets the opportunity to write an own numerical model of selected processes in the environment. More complex state of the art numerical models describing the behavior of a whole subsystem of</p> |

the environment shall be applied to answer some detailed questions. The numerical model results shall be presented and discussed with the course participants.

| | |
|---|--|
| Recommended Prerequisites | Mathematics I and II, Basic knowledge in Physics, Biology and Chemistry, familiarity with a programming language, in particular with 'R' and with Linux computers |
| Mandatory Prerequisites | none |
| Forms of Teaching and Proportion | Lecture - 2 hours per week per semester Exercise - 2 hours per week per semester Self organised studies - 120 hours |
| Teaching Materials and Literature | Tutorial for R and shell-skript language. Documentation of the model COSMO-CLM Tutorial of the model COSMO-CLM Documentation of the hydrological model HYDRUS. Tutorial of the model HYDRUS. Will be offered at the beginning of the semester |
| Module Examination | Continuous Assessment (MCA) |
| Assessment Mode for Module Examination | <ol style="list-style-type: none"> 1. 15 minutes Presentation (discussion should be at least 5 minutes) of the results of model programming in form of a presentation or report, 9 pages including figures, tables, references, title page and list of content (35%) 2. 15 minutes Presentation (discussion should be at least 5 minutes) of the results of model application in form of a presentation or report, 9 pages including figures, tables, references, title page and list of content (35%) 3. Written exam, duration 60 min. or open book online exam if required (30%) |
| Evaluation of Module Examination | Performance Verification – graded |
| Limited Number of Participants | 24 |
| Remarks | The number of participants in the exercise (240114 and 240116) is limited. See the exercise description for details. Entrance test of basics in modelling and programming (with R). Needs to be passed before starting with model programming and model application exercise. |

| Remarks | The module will not be offered in the summer semester of 2026. |
| Module Components | Summer semester: <ul style="list-style-type: none">• 240630 Lecture Methods of Water Resources Management - Lecture part• 240631 Seminar/Exercise Methods of Water Resources Management - Practical part |
| Components to be offered in the Current Semester | No assignment |

Module 42421 Natural Resource Investigation

assign to: Compulsory Elective Modules

Study programme Environmental and Resource Management

| Degree | Module Number | Module Form |
|-------------------|---------------|---------------------|
| Master of Science | 42421 | Compulsory elective |

| | |
|---|---|
| Modul Title | Natural Resource Investigation Rohstofferkundung |
| Department | Faculty 2 - Environment and Natural Sciences |
| Responsible Staff Member | Prof. Dr. rer. nat. Herd, Rainer |
| Language of Teaching / Examination | English |
| Duration | 2 semesters |
| Frequency of Offer | Every winter semester |
| Credits | 6 |
| Learning Outcome | <ul style="list-style-type: none"> • Get to know geological processes and to understand the role of these processes for the formation of natural resources • Become acquainted to the processes leading to the genesis of different raw materials • Study methods and techniques for investigation of natural resources • Use these investigation methods in the field and in the lab • Be able to present working results in an oral presentation and to defend them in an open discussion • Get an insight in the work of a professional exploration company during an excursion |
| Contents | <p>Lecture Prospection and Exploration of Natural Resources The lectures provides an overview about the geological processes which are responsible for the formation of different natural resources including energy resources, metals, industrial minerals and ground water. Methods for the prospection and exploration of these resources are presented using geological, geophysical, geochemical and remote sensing techniques. Advantages and disadvantages of the methods are discussed.</p> <p>Practical training Prospection and Exploration of Natural Resources The focus of this course is the practical training of the prospection and exploration methods in the field and in the lab. Geological, geophysical and remote sensing techniques are used in order to detect e.g. raw material deposits.</p> <p>Lecture/exercise Introduction to Coal Petrology Lecture and practical training at the microscope.</p> |

The lecture provides an overview about the genesis of coal seams and about the microscopic constituents of coal. The maceral concept is introduced. It is shown that coal is also a source of environmental information. The student will do a reconstruction of the paleoenvironment by using microscopic maceral analyses.

Excursion Prospex

Field trip to an active exploration site. Topics: Geological setting, exploration technology, efficiency and costs.

Recommended Prerequisites

- General high school knowledge in physics
- Basics in geology

Mandatory Prerequisites

none

Forms of Teaching and Proportion

Lecture - 3 hours per week per semester
 Exercise - 1 hours per week per semester
 Excursion - 8 hours
 Practical training - 3 hours per week per semester
 Self organised studies - 67 hours

Teaching Materials and Literature

Material provided by the Chair

Module Examination

Continuous Assessment (MCA)

Assessment Mode for Module Examination

- Written examination, 80 min. (50%)
- Written essay, 8-10 pages (30%)
- Short report about results of the microscopic analyses (20%)

Excursion participation is mandatory.

Evaluation of Module Examination

Performance Verification – graded

Limited Number of Participants

none

Remarks

none

Module Components

Winter semester:

- 240809 Lecture Prospection and Exploration of Natural Resources
- 240808 Excursion Raw Material Exploration
- 240804 Lecture/Exercise Introduction to coal petrology
- 240869 Examination Prospection and Exploration of Natural Resources

Summer semester:

- 420830 PR Prospection and Exploration of Natural Resources
- 842090 Examination Prospection and Exploration of Natural Resources

Components to be offered in the Current Semester

240830 Practical training
 Prospection and Exploration of Natural Resources (Part of Modul 42421) - 3 Hours per Term
240890 Examination
 Prospection and Exploration of Natural Resources (Modul 42421)

Module 42505 Freshwater Restoration Ecology

assign to: Compulsory Elective Modules

Study programme Environmental and Resource Management

| Degree | Module Number | Module Form |
|-------------------|---------------|---------------------|
| Master of Science | 42505 | Compulsory elective |

| | |
|---|--|
| Modul Title | Freshwater Restoration Ecology Ökologie der Gewässerrenaturierung |
| Department | Faculty 2 - Environment and Natural Sciences |
| Responsible Staff Member | Prof. Dr. rer. nat. habil. Martin-Creuzburg, Dominik |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | Every summer semester |
| Credits | 6 |
| Learning Outcome | Students know the basic principles and main methods of freshwater restoration and are able to assess the potential, but also the limitations, of restoration measures to mitigate or reverse human impacts. Students will be familiar with current methods and guidelines for evaluating surface water quality and restoration, as well as eco-engineering approaches to water management. Students will know cases of best-practice restoration and management. |
| Contents | Anthropogenic impact and current state of lakes, reservoirs, streams and rivers, quality assessment. Ecosystem services as target of management and restoration, impact of climate change on water bodies, strategies and planning of freshwater restoration, stream system rehabilitation and its limits, measures for in-stream habitat and floodplain enhancement, rehabilitation measures in the catchment, costs and benefits of restoration projects. General concepts and guidelines of lake and reservoir management, restoration principles, eco-engineering measures and other aspects of modern management of natural and artificial standing waters. Case studies of restoration and best management practice will be presented and discussed. |
| Recommended Prerequisites | Participation at module: • 13298 Basics for Freshwater Management |
| Mandatory Prerequisites | none |
| Forms of Teaching and Proportion | Lecture - 2 hours per week per semester Seminar - 2 hours per week per semester Excursion - 20 hours |

| | |
|---|---|
| | Self organised studies - 100 hours |
| Teaching Materials and Literature | Materials supplied via Moodle: Lecture notes, learning videos, literature for additional reading, key scientific articles and book chapters. |
| Module Examination | Continuous Assessment (MCA) |
| Assessment Mode for Module Examination | Written examination (80 minutes) at the end of the semester covering the main topics of the lectures and the seminar talks. Students will need to perform a seminar on an individual topic (20 min presentation and 20 min discussion). The exam result will contribute 65%, the presentation and post-presentation discussion 25%, active seminar participation 10%. Handing in protocols of the two excursions will gain extra points (2,5% of the total score for each protocol). |
| Evaluation of Module Examination | Performance Verification – graded |
| Limited Number of Participants | none |
| Remarks | none |
| Module Components | In summer semester: <ul style="list-style-type: none"> • 240513 Lecture Freshwater restoration ecology • 240538 Excursion Practical field course river Spree • 240517 Examination Freshwater restoration ecology |
| Components to be offered in the Current Semester | 240538 Excursion Practical field course river Spree - 0 Hours per Term 240513 Lecture/Seminar Freshwater restoration ecology (Modul 42505) - 4 Hours per Term 240517 Examination Freshwater restoration ecology |

Module 43406 Municipal Solid Waste Management

assign to: Compulsory Elective Modules

Study programme Environmental and Resource Management

| Degree | Module Number | Module Form |
|-------------------|---------------|---------------------|
| Master of Science | 43406 | Compulsory elective |

| | |
|---|--|
| Modul Title | Municipal Solid Waste Management Siedlungsabfallwirtschaft |
| Department | Faculty 2 - Environment and Natural Sciences |
| Responsible Staff Member | Prof. Dr. habil. Abendroth, Christian |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | Every winter semester |
| Credits | 6 |
| Learning Outcome | After a short introduction of general aspects of waste properties, waste collection and regulations focusing on a sustainable waste management concept, students will be made familiar with several aspects of processing for fulfilling the legislative requirements for recycling, treatment or an appropriate deposition on a landfill. Students should learn to develop appropriate technological solutions for municipalities or industrial branches in their home countries. |
| Contents | <p>Theoretical part: From the cradle to the grave: Generation, waste properties and challenges, collection, transportation, transfer, treatment, final disposal. Overview of the today's main managerial and technical solutions. Efficiency of waste management systems. Derivation of guidelines for appropriate waste management, examples: Waste avoidance, useful waste management, waste to energy, landfill-oriented processing of waste, waste to raw material. Overview of mechanical, thermal and biological processing.</p> <p>Practical training/seminar: The main focus of the practical part is sorting of residual waste. The students will gain practical experience in waste management, anaerobic digestion and composting. The seminar includes the presentation of results produced during the practical part.</p> |
| Recommended Prerequisites | Basic course in waste management is recommended. |
| Mandatory Prerequisites | none |
| Forms of Teaching and Proportion | Lecture - 3 hours per week per semester |

| | |
|---|---|
| | Practical training - 1 hours per week per semester Self organised studies - 120 hours |
| Teaching Materials and Literature | Literature lists will be handed out during the lectures. |
| Module Examination | Continuous Assessment (MCA) |
| Assessment Mode for Module Examination | <ul style="list-style-type: none">• Written examination, 75 min. (2/3)• in preparation for practical training (teamwork-5 students per group): 20 min presentation with minimum 15 presentation slides (1/3) |
| Evaluation of Module Examination | Performance Verification – graded |
| Limited Number of Participants | 30 |
| Remarks | none |
| Module Components | <ul style="list-style-type: none">• 238197 Lecture Municipal Solid Waste Management• 238136 Examination Municipal Solid Waste Management• 238115 Seminar/practical training - Waste Management |

Module 44107 Safety- and Risk-Analysis for Process Plants

assign to: Compulsory Elective Modules

Study programme Environmental and Resource Management

| Degree | Module Number | Module Form |
|-------------------|---------------|---------------------|
| Master of Science | 44107 | Compulsory elective |

| | |
|---|---|
| Modul Title | Safety- and Risk-Analysis for Process Plants Sicherheits- und Risikoanalyse für Prozessanlagen |
| Department | Faculty 3 - Mechanical Engineering, Electrical and Energy Systems |
| Responsible Staff Member | Prof. Dr.-Ing. Arellano-Garcia, Harvey |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | Every summer semester |
| Credits | 6 |
| Learning Outcome | After completing the module, students will be able to apply basic methods for performing and evaluating safety-related aspects for industrial plants. They learn methodical basics for the evaluation of probabilities of occurrence and the derivation of the resulting consequences. Using the methods taught for qualitative and quantitative risk assessment, students are able to independently develop sustainable concepts and solutions. They also have basic knowledge of safety-related plant optimization and can communicate this to plant operators, authorities, etc. |
| Contents | <ul style="list-style-type: none"> • Hazard identification methods (e.g. Checklists, FMEA, HAZOP) • Frequency evaluation methods (event tree, fault tree) • Consequence evaluation methods (e.g. one- and two phase flow (critical, sub-critical), dispersion of neutral and dense gas, fire, explosion and toxic hazards) • Qualitative and quantitative risk assessment methods • Safety related plant optimization <p>Exercise:</p> <ul style="list-style-type: none"> • Realization of safety and risk studies (method, case study) |
| Recommended Prerequisites | None |
| Mandatory Prerequisites | none |
| Forms of Teaching and Proportion | Lecture - 2 hours per week per semester Exercise - 1 hours per week per semester Practical training - 1 hours per week per semester |

| | |
|---|--|
| | Self organised studies - 120 hours |
| Teaching Materials and Literature | <ul style="list-style-type: none"> • Lecture notes • Lees,F.P.: Loss prevention in the process industries, Butterworth 1996, Oxford • Guidelines for chemical process quantitative risk analysis AICHE, 1989, New York • Guidelines for hazard evaluation procedures AICHE , 1992, New York • W.F.Kenney: Process risk management systems, VCH 1993, New York • D. A. Crowl;J. F. Louvar: Chemical process safety, Prentice Hall, Inc., 2002, New Jersey |
| Module Examination | Prerequisite + Final Module Examination (MAP) |
| Assessment Mode for Module Examination | <p>Prerequisite:</p> <ul style="list-style-type: none"> • Successful completion of the exercises within the practical training <p>Final module examination:</p> <ul style="list-style-type: none"> • Written examination, 90 min. |

Module 11284 Advanced Studies of International Environmental Law

assign to: Modules with the Focus on Environmental Economics, Planning and Law

Studienrichtung / Vertiefung: Umweltökonomie, -planung und -recht

Study programme Environmental and Resource Management

| Degree | Module Number | Module Form |
|-------------------|---------------|---------------------|
| Master of Science | 11284 | Compulsory elective |

| | |
|---|--|
| Modul Title | Advanced Studies of International Environmental Law Internationales Umweltrecht für Fortgeschrittene |
| Department | Faculty 5 - Business, Law and Social Sciences |
| Responsible Staff Member | Prof. Dr. jur. Albrecht, Eike |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | Every summer semester |
| Credits | 6 |
| Learning Outcome | <p>After completing the module, students should be able to:</p> <ul style="list-style-type: none"> • Understand international environmental law and its role in the management of global environmental problems, • Identify and critically analyse issues pertaining to international environmental disputes, • Apply international environmental law in specific concrete cases, • Comprehend and evaluate the significance of international environmental law in protecting the environment and fostering international relations. <p>After completing the seminar, students will:</p> <ul style="list-style-type: none"> • Understand the way in which international agreements are achieved, • Understand the role various international actors play in decision making, • Have an understanding of the relevant actors who contribute to the outcome of international agreements, • Be able to make clear and convincing statements (orally and in written form), • Understand international decision-making procedures after playing an active role in a (simulated) negotiation process, • Have improved their skills in effectively arguing their case in relation to the topics discussed in class. |
| Contents | <p>Lecture: Advanced Studies of International Environmental Law</p> <ul style="list-style-type: none"> • Introduction to international law and international environmental law • Creation and development of international environmental law |

- Implementation and enforcement strategies of international environmental agreements
- International environmental agreements with respect to the following topics:
 - Biodiversity (Biodiversity Convention/CITES/WHC).
 - Marine environment (Convention on the Law of the Sea)
 - Climate change (Climate Change Convention/Kyoto Protocol/Paris Agreement)
 - Ozone depletion (Convention for Protecting Ozone Layer/Montreal Protocol)
 - Toxic/hazardous substances (Basel Convention on Hazardous Waste)
 - Citizens rights to information, public participation and access to Justice

Seminar: International Negotiations and Environmental Decision-Making

- Challenges of international negotiations with a focus on climate change
- Actors of global environmental governance and international environmental decision-making
- State participation in global environmental governance
- The role of non-state actors in environmental decision-making and negotiations
- Simulation (role play) of an international conference (2 groups with maximum 35 students)

At the beginning of the semester, the students will be prepared to participate in a simulation of a multilateral negotiation process. (Climate Conference Simulation Groups). Each student in the simulation group will take the role of a relevant international player such as a country, an NGO, the private sector, or a subsidiary body. Participants will be required to prepare (in written and oral form) an assigned country/organisation engaged in the international environmental negotiation process to actively participate in the final role-play.

Recommended Prerequisites

Knowledge of the content of module:

- 41201 *International Environmental Law*

Mandatory Prerequisites

none

Forms of Teaching and Proportion

Lecture - 2 hours per week per semester
Seminar - 2 hours per week per semester
Self organised studies - 120 hours

Additional literature will be announced in class and made available on the Moodle page of the course.

Module Examination

Continuous Assessment (MCA)

Assessment Mode for Module Examination

- **Written Exam, 120 minutes** (maximum 40 points)

And

Climate Conference Simulation Group:

- Paper for preparation of the climate conference, 2 pages (maximum 15 points)
- Simulation of a climate conference, 10 SWS (maximum 25 points)

or

Weekly seminars Group:

- 10 pages essay submission on topics related to environmental negotiations and decision-making (maximum 40 points)

To pass (grade 4,0) the module, students need to earn a minimum of 40 points.

Evaluation of Module Examination

| Modul Title | Climate Change and Migration Klimawandel und Migration |
| Department | Faculty 5 - Business, Law and Social Sciences |
| Responsible Staff Member | Associate Prof. (Univ. Damaskus) Dr. agr. Ibrahim, Bachar |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | Every summer semester |
| Credits | 6 |
| Learning Outcome | After completion of this module, students will have a solid understanding of Climate Change and its impacts, especially on vulnerable countries. Students will further have the knowledge about various concepts and logical arguments linking climate change and migration. |
| Contents | <p>Part "Climate Change"</p> <ul style="list-style-type: none"> • Observations of change in the climate system • Critically assess the role of human activities in modern climate change • Assess future climate change scenarios and their potential impact on the Earth • climate change agenda and how this agenda impact on policy • Identify the Impacts and related Adaptation masures <p>Part "Migration"</p> <ul style="list-style-type: none"> • The potential link between climate change, migration, • The Task of defining 'climate refugee' • climate change contribution to the refugee problems • Gaps in the international legal framework • Individual and Collective Action on Mitigation <p>Lectures will be given live online and afterwards uploaded as a PDF on the moodle For the exercise, students have to solve a given problem. Students have to select a topic on moodle and register in the given table (maximum of 4 students per group).</p> |
| Recommended Prerequisites | none |

| | |

Module 13371 ERM-Research-Module

assign to: Modules with the Focus on Environmental Economics, Planning and Law

Studienrichtung / Vertiefung: Umweltökonomie, -planung und -recht

Study programme Environmental and Resource Management

| Degree | Module Number | Module Form |
|-------------------|---------------|-------------|
| Master of Science | 13371 | Mandatory |

| | |
|---|---|
| Modul Title | ERM-Research-Module ERM-Research-Modul |
| Department | Faculty 2 - Environment and Natural Sciences |
| Responsible Staff Member | Prof. Dr. rer. nat. Beckmann, Michael |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | Every semester |
| Credits | 18 |
| Learning Outcome | <p>For students with a strong interest and capability in research, the ERM-Research-Module is an advanced study alternative in the Master's programme. This variant includes in particular the independent preparation of a two-semester research project. The students learn how to work on scientific problem formulation, the target-oriented implementation of experimental approaches and the scientific evaluation and presentation of the results.</p> <p>The students carry out research-orientated tasks which they work on increasingly independently and in exchange with other project participants under the intensive supervision of experienced researchers. The main scope is the development of scientific problem-solving skills by means of information gathering as well as the application of theoretical knowledge acquired in small group advanced seminars.</p> |
| Contents | The supervising lecturers select suitable topics from their subject areas and intensively support the students in learning the necessary subject-specific and interdisciplinary skills. The contents of the module are regularly adapted in line with ongoing research projects in the participating disciplines. |
| Recommended Prerequisites | Depending on the topic excellent knowledge in mathematics/statistics, chemistry, biology and/or social as well as environmental sciences is required. |
| Mandatory Prerequisites | none |
| Forms of Teaching and Proportion | Lecture - 2 hours per week per semester |

| | |
|---|---|
| | Exercise - 2 hours per week per semester Self organised studies - 480 hours |
| Teaching Materials and Literature | To be named by supervisor. |
| Module Examination | Continuous Assessment (MCA) |
| Assessment Mode for Module Examination | Written project report with all factual information about the work (as hard copy and digital form) and a presentation. Written report, 20-30 pages (75%) Presentation of results, 30 min. (25%) |
| Evaluation of Module Examination | Performance Verification – graded |
| Limited Number of Participants | none |
| Remarks | The module "ERM Research Module" can only be repeated once if it is not passed. It is one of the practical study sections and is therefore excluded from the free trial regulation. |
| Module Components | <ul style="list-style-type: none">• ERM-Research Lecture• ERM-Research Exercise |

Module 13655 Un/Disciplining Knowledge: Technology, Science, and Society in Transformation

assign to: Modules with the Focus on Environmental Economics, Planning and Law

Studienrichtung / Vertiefung: Umweltökonomie, -planung und -recht

Study programme Environmental and Resource Management

| Degree | Module Number | Module Form |
|-------------------|---------------|---------------------|
| Master of Science | 13655 | Compulsory elective |

| | |
|---|--|
| Modul Title | Un/Disciplining Knowledge: Technology, Science, and Society in Transformation Epistemischer Ungehorsam: Technik, Wissenschaft und Gesellschaft im Wandel |
| Department | Faculty 5 - Business, Law and Social Sciences |
| Responsible Staff Member | Prof. Dr. rer. nat. phil. habil. Schwarz, Astrid |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | Every winter semester |
| Credits | 6 |
| Learning Outcome | By the end of the module students are able to develop a research question within the academic field of Science and Technology Studies and create and present a research design, as well as identify and make use of appropriate sources of empirical material for your analysis, furthermore to identify, select and compare appropriate concepts and methods relating to an interdisciplinary research field and analyse changes in fields of science and technology with respect to knowledge forms. |
| Contents | This module presents central theories and approaches developed in Science and Technology Studies. The module focuses on questions about disciplining and undisciplining knowledge, the corresponding epistemic and ontological perspectives and the political economy of science. It explores concepts being concerned about shifting concepts of disciplinarity, such as interdisciplinarity, transdisciplinarity or postdisciplinarity. |
| Recommended Prerequisites | Knowledge from the courses <ul style="list-style-type: none"> • Technik in Wissenschaft und Gesellschaft • Philosophy of Science in Practice |
| Mandatory Prerequisites | none |
| Forms of Teaching and Proportion | Lecture - 2 hours per week per semester |

| | |
|---|--|
| | Seminar - 2 hours per week per semester Self organised studies - 120 hours |

Module 13657 How to Talk about Nature?

assign to: Modules with the Focus on Environmental Economics, Planning and Law

Studienrichtung / Vertiefung: Umweltökonomie, -planung und -recht

Study programme Environmental and Resource Management

| Degree | Module Number | Module Form |
|-------------------|---------------|---------------------|
| Master of Science | 13657 | Compulsory elective |

| | |
|---|--|
| Modul Title | How to Talk about Nature? Wie über Natur sprechen? |
| Department | Faculty 5 - Business, Law and Social Sciences |
| Responsible Staff Member | Prof. Dr. rer. nat. phil. habil. Schwarz, Astrid |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | Every winter semester |
| Credits | 6 |
| Learning Outcome | After passing the module, students understand main philosophical theories of “nature”, interrogate the concept of “nature” and expose its numerous ideological and cultural manifestations. They identify the main ethical dimensions of “nature”, and its crosscultural and political dimensions. Additionally they understand the power of narratives and storytelling to shape our environmental present and future by insight into reading, writing, and visual practices about “nature”. |
| Contents | <p>“How to talk about nature?” is closely linked to the question of what “nature” is, how it is construed and in which way we act with, in or against it. It is a question that is ontological and epistemological at the same time, it is about how we imagine nature “to be” and how we conceive knowledge about nature. The ideas about this entwinement are manifold over time and in space, different cultures have developed different ways of thinking and also practices of how to deal with a culture/nature distinction. Another important conceptual issue is how nature and technology are related, in contemporary debates for instance, “nature” is often identified with “environment” and as such inescapably entangled with its cultural, political, and technological context. Is the use of technology in “nature” then a threat or an opportunity to build a genuinely sustainable world?</p> <p>This module seeks to answer these and other questions, by approaching “nature” with variously grounded historical and contemporary theoretical approaches. For example, the concept of “nature” was differently interpreted in ancient times, compared to modern contemporary cultures. We will probe the different usage, the scope of historical and cross-cultural depth, the semantics, the images/</p> |

imaginaries, and finally, the logical coherence of “nature” concepts. This variety of topics means that the assigned readings will draw from a wide range of sources. With respect to handle current ecological and technocultural problems, a conscious reflection about “nature” seems to be required. Thus, the module should be also seen, in part, as a way to gain insight into contemporary reading, writing, and visual practices about “nature”.
Participation in the accompanying excursion is encouraged.

Module 13706 Justice and Diversity in Environmental Change

assign to: Modules with the Focus on Environmental Economics, Planning and Law

Studienrichtung / Vertiefung: Umweltökonomie, -planung und -recht

Study programme Environmental and Resource Management

| Degree | Module Number | Module Form |
|-------------------|---------------|---------------------|
| Master of Science | 13706 | Compulsory elective |

| | |
|---|--|
| Modul Title | Justice and Diversity in Environmental Change Gerechtigkeit und Diversität im Kontext von Umweltveränderungen |
| Department | Faculty 5 - Business, Law and Social Sciences |
| Responsible Staff Member | Prof. Dr. phil. Jaeger-Erben, Melanie |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | Every winter semester |
| Credits | 6 |
| Learning Outcome | <ul style="list-style-type: none"> • Acquiring a profound understanding of different concepts on social justice and diversity in the context of environmental change, climate change and sustainable development. • Discussing and critically reflecting upon current issues related to environmental justice, such as resource conflicts, land-use change or environmental movements. • Methodological skills in reading and discussing academic texts, preparing Pecha Kucha presentations, and recording scientific podcasts. |
| Contents | <p>Environmental problems have the capacity to affect all of us. However, certain communities are disproportionately exposed to environmental hazards, such as air pollution. Also, some regions of the world (will) suffer much more from the implications of climate change. Environmental problems thus do not affect us all equally, or in the same way. Nor do we have equal power to decide solutions to these problems, or to take the necessary action to solve them. This unequal positioning, which often impose the greatest burdens upon marginalised, disadvantaged and less powerful populations, forms the central premise of environmental justice research and activism. The goal of this module is to gain a comprehensive understanding of social justice, environmental justice and diversity in environmentalism. The course introduces concepts such as environmental racism, climate justice, ecofeminism, and indigenous perspectives on environmental change. The theoretical perspectives introduced are applied to various environmental movements and resource conflicts all over the world.</p> |

Module 13833 Analysis and Modelling of Human-Environment Systems

assign to: Modules with the Focus on Environmental Economics, Planning and Law

Studienrichtung / Vertiefung: Umweltökonomie, -planung und -recht

Study programme Environmental and Resource Management

| Degree | Module Number | Module Form |
|-------------------|---------------|---------------------|
| Master of Science | 13833 | Compulsory elective |

| | |
|---|---|
| Modul Title | Analysis and Modelling of Human-Environment Systems Analyse und Modellierung von Mensch-Umwelt-Systemen |
| Department | Faculty 2 - Environment and Natural Sciences |
| Responsible Staff Member | Prof. Dr. Müller, Birgit |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | Every winter semester |
| Credits | 6 |
| Learning Outcome | Upon completing the course, students will be able to: <ul style="list-style-type: none"> • Identify key features of coupled human-environment systems and apply this knowledge to interdisciplinary case studies. • Understand core principles of complex adaptive systems. • Design, implement, and analyse agent-based models to investigate human-environment interactions. |
| Contents | How do deforestation, urban expansion, or climate policies impact ecosystems and communities? Understanding these complex interactions is key to tackling today's urgent environmental challenges. This course provides an introduction to modelling human-environment systems, emphasizing the intricate feedback loops between human activities and the biophysical world—across local, regional, and global scales. The module has two main focus areas. First, students will explore the key characteristics of coupled socio-environmental systems. We will read and discuss interdisciplinary research papers on applied case studies and theoretical considerations and examine how models can bridge science and real-world decision-making — whether in climate change adaptation, land-use planning, or resource management. Specific topics include to understand how human behaviour is represented in models, which role play social networks and how common pool resource management can support sustainable outcomes. Guest speakers will enrich the course with diverse perspectives and practical insights. |

Second, students will acquire hands-on experience in agent-based modelling using the NetLogo programming environment designed for beginners. They will learn how to conceptualize, build, and analyse computer models to simulate interactions within socio-environmental systems. Additionally, an introduction to statistical data analysis in R will provide essential tools for model evaluation and interpretation.

Module 13925 Alternative Economies

assign to: Modules with the Focus on Environmental Economics, Planning and Law

Studienrichtung / Vertiefung: Umweltökonomie, -planung und -recht

Study programme Environmental and Resource Management

| Degree | Module Number | Module Form |
|-------------------|---------------|---------------------|
| Master of Science | 13925 | Compulsory elective |

| | |
|---|---|
| Modul Title | Alternative Economies Alternative Ökonomien |
| Department | Faculty 5 - Business, Law and Social Sciences |
| Responsible Staff Member | Prof. Dr. phil. Jaeger-Erben, Melanie |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | Every summer semester |
| Credits | 6 |
| Learning Outcome | Upon successful completion, students will have a solid overview on heterodox economic theories (including feminist, post-Keynesian, ecological and political economy perspectives), and understand how they differ from neoclassical economics. They are skilled in discussing and critically reflecting upon the opportunities, limitations and the applicability of different economic concepts presented in class. Students will acquire methodological skills in researching, reading and discussing academic literature. |
| Contents | The multiple crises we are currently facing – in relation to climate, biodiversity, democracy, or social inequalities – require different economic perspectives and practices. In lectures and seminars, students will learn about the limits of the dominant neoclassical paradigm and gain an overview on heterodox economic schools. They will be introduced to concepts such as degrowth, care economy, economic democracy or social entrepreneurship. At the same time, this course will critically analyse fundamental aspects of current economies, such as money, growth, profits, work or the relation to nature, and discuss practical examples of alternative economies. |
| Recommended Prerequisites | Knowledge of the contents of module • 13922 <i>Introduction to Transformation Studies</i> |
| Mandatory Prerequisites | none |

Module 13957 Behavioural Economics

assign to: Modules with the Focus on Environmental Economics, Planning and Law

Studienrichtung / Vertiefung: Umweltökonomie, -planung und -recht

Study programme Environmental and Resource Management

| Degree | Module Number | Module Form |
|-------------------|---------------|---------------------|
| Master of Science | 13957 | Compulsory elective |

| | |
|---|---|
| Modul Title | Behavioural Economics |
| | Verhaltensökonomie |
| Department | Faculty 5 - Business, Law and Social Sciences |
| Responsible Staff Member | Prof. Dr. oec. habil. Schnellenbach, Jan |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | Every winter semester |
| Credits | 6 |
| Learning Outcome | After completing this module, students will be able to apply behavioural economic models to analyse individual decisions. They can integrate psychological research approaches into economic models. They can independently develop and master advanced research approaches in the field of behavioural economics and have a solid understanding of the basics of empirical, including experimental, research methods in the field of behavioural economics. Furthermore, they will be able to critically analyse and evaluate economic policy proposals with a behavioral economics perspective. |
| Contents | <ul style="list-style-type: none"> • Homo Economicus: The economic concept of human behaviour • The economic theory of moral action • Behavioural anomalies: an overview • Bounded rationality • Dealing with risk and uncertainty • Prospect theory • Heuristics: Curse or blessing? • Fairness and social norms • Economic happiness research • Behavioural political economy • Behavioural public economics |
| Recommended Prerequisites | Good knowledge of microeconomics. |
| Mandatory Prerequisites | No successful participation in the corresponding discontinued module 11814 Behavioral Economics. |

| | |
|---|--|
| Forms of Teaching and Proportion | Lecture - 2 hours per week per semester Exercise - 2 hours per week per semester Self organised studies - 120 hours |
| Teaching Materials and Literature | Foundational literature: <ul style="list-style-type: none">• Angner, E. (2012). A Course in Behavioral Economics, Houndmills: Palgrave Macmillan.• Additional literature will be announced during the lecture. In the exercise: <ul style="list-style-type: none">• Wilkinson, N. and Klaes, M. (2012), An Introduction to Behavioral Economics. 2nd edition, Houndmills: Palgrave Macmillan. |
| Module Examination | Continuous Assessment (MCA) |
| Assessment Mode for Module Examination | <ul style="list-style-type: none">• Term paper with a maximum of 15.000 characters incl. spaces (roughly 6 pages), 50 points• Final exam, 40 minutes, 50 points. |
| Evaluation of Module Examination | Performance Verification – graded |
| Limited Number of Participants | none |
| Remarks | This module is a successor module to the module „Behavioral Economics (11814)". Students who have already passed the module cannot take the module "Behavioral Economics (13957)" again. |
| Module Components | Behavioral Economics (Lecture) Behavioral Economics (Exercise) |
| Components to be offered in the Current Semester | No assignment |

Module 13958 Economics of Innovation

assign to: Modules with the Focus on Environmental Economics, Planning and Law

Studienrichtung / Vertiefung: Umweltökonomie, -planung und -recht

Study programme Environmental and Resource Management

| Degree | Module Number | Module Form |
|-------------------|---------------|---------------------|
| Master of Science | 13958 | Compulsory elective |

| | |
|---|---|
| Modul Title | Economics of Innovation Innovationsökonomik |
| Department | Faculty 5 - Business, Law and Social Sciences |
| Responsible Staff Member | Prof. Dr. oec. habil. Schnellenbach, Jan |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | Each winter semester even year |
| Credits | 6 |
| Learning Outcome | Students will understand how innovation can be explained from a microeconomic perspective. They will know the economic, institutional, and psychological prerequisites for entrepreneurial innovation. Upon successful completion of the module, students will be able to critically assess under which circumstances innovative entrepreneurial actions are positively evaluated and potentially eligible for economic policy support. |
| Contents | Innovation in the history of economic theory; Types of innovation; Competition and innovation; Organizational aspects of innovation; Political and institutional prerequisites for innovation; Diffusion of innovations; Innovation and economic growth; Innovations and societal welfare. |
| Recommended Prerequisites | Good knowledge of microeconomics. |
| Mandatory Prerequisites | none |
| Forms of Teaching and Proportion | Lecture - 2 hours per week per semester Exercise - 2 hours per week per semester Self organised studies - 120 hours |
| Teaching Materials and Literature | G.M. Swann, The Economics of Innovation: An Introduction, Elgar, 2013 as well as additional articles and book chapters announced during the lecture |
| Module Examination | Continuous Assessment (MCA) |

| | |
|---|--|
| Assessment Mode for Module Examination | <ul style="list-style-type: none">• Term paper with a maximum of 15,000 characters including spaces (equivalent to approximately 6 pages); (50%)• Exam, 40 minutes, which can also be conducted digitally (50%) |
| Evaluation of Module Examination | Performance Verification – graded |
| Limited Number of Participants | none |
| Remarks | No offer in the winter semester 2025/26. |
| Module Components | Innovation Economics Lecture - 2 hours per week Innovation Economics Exercise - 2 hours per week |
| Components to be offered in the Current Semester | No assignment |

Module 13959 Law and Economics

assign to: Modules with the Focus on Environmental Economics, Planning and Law

Studienrichtung / Vertiefung: Umweltökonomie, -planung und -recht

Study programme Environmental and Resource Management

| Degree | Module Number | Module Form |
|-------------------|---------------|---------------------|
| Master of Science | 13959 | Compulsory elective |

| | |
|---|--|
| Modul Title | Law and Economics Recht und Wirtschaft |
| Department | Faculty 5 - Business, Law and Social Sciences |
| Responsible Staff Member | Prof. Dr. oec. habil. Schnellenbach, Jan |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | Each winter semester odd year |
| Credits | 6 |
| Learning Outcome | Students will gain an overview of the field of economic analysis of law, which involves analyzing legal rules from the perspective of economic theory. It focuses on the interaction of legal norms with the actions of private households and companies, as well as the impact of constitutional law on government actions. Students should learn to analyze legal norms in terms of their efficiency and economic effects, including microeconomic efficiency, as well as growth and distribution effects. They should also be able to assess why specific legal norms have developed historically as we know them today. |
| Contents | <ol style="list-style-type: none"> 1. Fundamentals of the theory of private property rights <ol style="list-style-type: none"> a) Historical development of private property b) Theories of the emergence of private property rights c) Economic analysis of common-pool resources d) Property rights in intangible assets 2. Economic analysis of contract law <ol style="list-style-type: none"> a) Complete and incomplete contracts b) Moral hazard and adverse selection c) Efficient responses to contract breaches 3. Economic analysis of tort law <ol style="list-style-type: none"> a) The Coase theorem b) Economic analysis of liability rules 4. Economic analysis of criminal law <ol style="list-style-type: none"> a) Differentiating between tort law and criminal law b) Deterrence effects of criminal law c) Optimal deterrence effects 5. Constitutional economics |

- a) Fundamentals of the economic theory of public law
- b) Empirical analysis of the economic effects of constitutional rules

| | |

Term

Module 14288 Psychology of Entrepreneurship and Change

assign to: Modules with the Focus on Environmental Economics, Planning and Law

Studienrichtung / Vertiefung: Umweltökonomie, -planung und -recht

Study programme Environmental and Resource Management

| Degree | Module Number | Module Form |
|-------------------|---------------|---------------------|
| Master of Science | 14288 | Compulsory elective |

| | |
|---|--|
| Modul Title | Psychology of Entrepreneurship and Change Psychologie des Unternehmertums und Wandels |
| Department | Faculty 5 - Business, Law and Social Sciences |
| Responsible Staff Member | Prof. Dr. Urbig, Diemo |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | Every winter semester |
| Credits | 6 |
| Learning Outcome | After completing this module, students will understand how basic psychological theories of decision making under uncertainty, complex interdependence, and intertemporal dynamics help explain the behavior of individuals who drive change, such as entrepreneurs, innovators and social activists. They will have developed a basic understanding of key psychological and behavioral economic theories related to decision-making under risk and ambiguity. Identify and explain critical thinking and decision-making patterns in the work context. Students will be able to apply theories to real-world situations. |
| Contents | <p>In this module, we venture into the specifics of a wide range of decision-making theories. We travel through a diverse collection of seminal theories, including many that have formed the basis of Nobel Prize-winning research. We emphasize the interdisciplinary application of insights to ensure that students from a variety of disciplines can absorb and apply the knowledge gained in this module to their own professional decision-making scenarios.</p> <p>The literature is presented in the lecture and students can afterwards read the literature in depth.</p> <p>The topics include:</p> <ul style="list-style-type: none"> • Satisficing and dual process theories • Risk aversion and ambiguity aversion • Prospect theory and loss aversion • Mental accounting and choice bracketing • Risk reduction strategies: Hedging, learning, and real options • Time preferences |

- Status-quo, escalation of commitment, and the not-invented-here effect
- Personal initiative, sensation seeking, and entrepreneurship
- Rational herding and individually irrational learning
- Nash equilibrium and individually irrational cooperation

The concepts and theories are presented in lectures.
Students practice their theory application skills by presenting and discussing critical issues and applications of these theories in seminar.

Module 14872 Design Science in Entrepreneurship and Management

assign to: Modules with the Focus on Environmental Economics, Planning and Law

Studienrichtung / Vertiefung: Umweltökonomie, -planung und -recht

Study programme Environmental and Resource Management

| Degree | Module Number | Module Form |
|-------------------|---------------|---------------------|
| Master of Science | 14872 | Compulsory elective |

| | |
|---|--|
| Modul Title | Design Science in Entrepreneurship and Management Designwissenschaft in Unternehmertum und Management |
| Department | Faculty 5 - Business, Law and Social Sciences |
| Responsible Staff Member | Prof. Dr. phil. Scheidgen, Katharina |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | Every semester |
| Credits | 6 |
| Learning Outcome | <p>Successfully completing this course means, students will be able to apply design science in both scientific and practical projects. They will understand how design science differs from traditional explanatory research and know how to develop practical, research-based solutions to pressing challenges.</p> <p>Students will be able to identify design problems worth solving and use qualitative methods such as interviews to understand real-world problems. Based on this, they will be able to derive design requirements and create useful solutions, such as tools, processes, or frameworks. They will be competent in how to co-design these solutions with relevant stakeholders as well as how to evaluate these solutions.</p> |
| Contents | <p>The course <i>Design Science in Entrepreneurship and Management</i> introduces students to an innovative, impact-oriented approach that bridges academic theorizing with real-world problem solving. Design science is a problem-solving and scientific research approach that focuses on designing and evaluating solutions to pressing, complex problems. Unlike traditional academic research, which typically aims to understand and explain phenomena (“how and why” things happen), design science aims to shape and improve reality, answering “how can” and “how should things be” questions.</p> <p>The students will work in small teams and engage with a real-world problem. This problem will be introduced through a design brief, which outlines the problem they are asked to solve. Each team will plan and conduct their own design science mini-project. They will derive design requirements, that are, insights into what a solution must achieve in order to be useful. Based on these design requirements,</p> |

they will co-create artifacts and evaluate them. Drawing on both their artifact evaluation and academic literature, students will formulate design principles, that are, prescriptive knowledge that explains how to change an existing situation into a preferred one. Throughout their project, students will engage with relevant stakeholders to collect data, for example to understand the problem better or evaluate their solutions. The results of the project will be presented in two formats: a written report and an oral presentation.

By completing their own mini design science projects, students will gain hands-on experience in planning and conducting such projects. They will also learn how to communicate with relevant stakeholders, both in written reports and in oral presentations.

| | |
|---|--|
| Recommended Prerequisites | <ul style="list-style-type: none"> • Experience in reading and engaging with academic literature as well as • an interest in problem-solving are advantageous. • Basic knowledge of qualitative approaches such as case studies are helpful. |

Module 14874 An Introduction to Basic Algorithms to Solve Environmental and Resource Management Optimization Problems

assign to: Modules with the Focus on Environmental Economics, Planning and Law

Studienrichtung / Vertiefung: Umweltökonomie, -planung und -recht

Study programme Environmental and Resource Management

| Degree | Module Number | Module Form |
|-------------------|---------------|---------------------|
| Master of Science | 14874 | Compulsory elective |

| | |
|---|---|
| Modul Title | An Introduction to Basic Algorithms to Solve Environmental and Resource Management Optimization Problems Eine Einführung in grundlegende Algorithmen zur Lösung von Optimierungsproblemen im Umwelt- und Ressourcenmanagement |
| Department | Faculty 2 - Environment and Natural Sciences |
| Responsible Staff Member | Dr. rer. nat. Sturm, Astrid-Utte |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | Every winter semester |
| Credits | 6 |
| Learning Outcome | After participating in the module, students should <ul style="list-style-type: none"> • have a basic understanding of programming principles, • have a basic understanding of graphs and graph algorithm • be able to identify optimization problems in the field of environmental and research management and • be able to match real world optimization problems to introduced algorithmic solutions. |
| Contents | An introduction to basic algorithms which can be used for typical optimization problems in environmental and research management. For example, where to place wind turbines in a given landscape while optimizing given parameters e.g. maximizing energy generation or minimizing biodiversity disturbance. We start with a short introduction / refresher of basic programming principles and focus during the course on understanding and enabling the use of existing algorithms as graph algorithms or when to use other approximation algorithms like greedy. All algorithms are introduced and discussed in the context of environmental and resource related optimization problems. <ol style="list-style-type: none"> 1. Basic programming principles 2. Graph algorithms 3. Greedy algorithms 4. Knapsack problem 5. Dynamic Programming |

| | |
|---|--|
| | 6. Simulated Annealing |
| Recommended Prerequisites | None |
| Mandatory Prerequisites | None |
| Forms of Teaching and Proportion | Lecture - 2 hours per week per semester Seminar - 2 hours per week per semester |
| Teaching Materials and Literature | "The Algorithm Design MANUAL" by Steven S. Skiena (Springer); "Algorithms Unplugged" by Berthold Vöcking et al (Springer); Or the German Version: "Taschenbuch der Algorithmen" by Berthold Vöcking et al |
| Module Examination | Continuous Assessment (MCA) |
| Assessment Mode for Module Examination | Practical project presentation, 30 min (50%) in groups oral examination, 20 min. (50%) |
| Evaluation of Module Examination | Performance Verification – graded |
| Limited Number of Participants | none |
| Remarks | None |
| Module Components | 50% Lectures 50% Exercises – group project work with seminar presentation |
| Components to be offered in the Current Semester | No assignment |

Module 41404 Strategic Environmental Assessment and Environmental Impact Assessment

assign to: Modules with the Focus on Environmental Economics, Planning and Law

Studienrichtung / Vertiefung: Umweltökonomie, -planung und -recht

Study programme Environmental and Resource Management

| Degree | Module Number | Module Form |
|-------------------|---------------|---------------------|
| Master of Science | 41404 | Compulsory elective |

| | |
|---|---|
| Modul Title | Strategic Environmental Assessment and Environmental Impact Assessment |
| | Strategische Umweltprüfung und Umweltverträglichkeitsprüfung |
| Department | Faculty 2 - Environment and Natural Sciences |
| Responsible Staff Member | Prof. Dr. Dr.h.c. (NMU, UA) Schmidt, Michael |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | Every winter semester |
| Credits | 6 |
| Learning Outcome | <p>Environmental Impact Assessment (EIA) After completing the module, the students will be able:</p> <ul style="list-style-type: none"> • to compare the origins and development of EIA in the USA, Europe and worldwide; • to critically review the EIA process, explaining its various steps; • to select appropriate impact identification and prediction methods for the use within the EIA process. <p>Strategic Environmental Assessment (SEA) After completing the module, the students will be able:</p> <ul style="list-style-type: none"> • to understand the key principles, procedure and application of SEA; • to discuss SEA as a policy instrument and a way to improve strategic actions; • to explore benefits and barriers to a successful SEA; • to highlight the links and differences between SEA and Project EIA; • to understand the importance of strategic objectives and their alternatives at SEA level. |
| Contents | <p>The contents of lectures will be discussed in more detail and applied to different case studies during seminars. While the lecture provides theoretical background, the seminars utilise a more practice-oriented approach. Students will apply various methods explained during the lectures with the help of relevant case studies.</p> <p>Environmental Impact Assessment (EIA)</p> |

- The history and development of EIA in the USA and the European Union
- The legal context of EIA (NEPA and the European Union EIA Directive)
- The EIA process – screening, scoping, environmental baseline, impact assessment, environmental impact statement (EIS) and its review, public participation, decision making and monitoring
- Methods used for identification of impacts and assessing their significance (checklists, matrices, networks, map overlays etc.)

Strategic Environmental Assessment (SEA)

- Basic concept and understanding of SEA, its benefits and importance for transition towards sustainability
- The objectives and implementation of the EC's SEA Directive 2001/42/EC
- The differences and similarities between EIA and SEA
- The SEA procedure and its integration into the process of planning

Recommended Prerequisites

None

Mandatory Prerequisites

none

Forms of Teaching and Proportion

Lecture - 2 hours per week per semester
Seminar - 2 hours per week per semester
Self organised studies - 120 hours

Teaching Materials and Literature

Lecture notes and presentations shown during seminars will be available for downloading from the BTU Moodle learning portal. For students interested in more in-depth study of lecture topics, optional advanced readings will be regularly uploaded to the BTU elearning portal Moodle.

Recommended Journals:

- Environmental Impact Assessment Review published by Elsevier
- Impact Assessment and Project Appraisal published by the International Association for Impact Assessment (IAIA)

Both journals are electronically available to all BTU students at the following web pages:

- <http://www.sciencedirect.com/science/journal/01959255>
- <https://www.tandfonline.com/loi/tiap20>

N.B.: to get full access for articles, these web pages have to be accessed from within BTU network or with the help of a VPN-Client.

Module Examination

Assessment Mode for Module Examination

Continuous Assessment (MCA)

- Oral performance verification (duration 10 minutes, maximum 15 points)
- Presentation (duration 10 minutes, maximum 15 points)

To pass the module students need to gain a minimum of 12 points (the sum of points for the above mentioned module components).

Evaluation of Module Examination

Performance Verification – graded

Limited Number of Participants

none

| | |
|---|---|
| Remarks | Registering for Examination of the module SEA/EIA is mandatory! No registration means no final grade in the end. |
| Module Components | <ul style="list-style-type: none">• 2403121 LE Environmental Impact Assessment and Strategic Environmental Assessment• 2403122 SE Environmental Impact Assessment and Strategic Environmental Assessment |
| Components to be offered in the Current Semester | No assignment |

Module 41405 Cost-Benefit Analysis in Environmental Evaluation

assign to: Modules with the Focus on Environmental Economics, Planning and Law

Studienrichtung / Vertiefung: Umweltökonomie, -planung und -recht

Study programme Environmental and Resource Management

| Degree | Module Number | Module Form |
|-------------------|---------------|---------------------|
| Master of Science | 41405 | Compulsory elective |

| | |
|---|---|
| Modul Title | Cost-Benefit Analysis in Environmental Evaluation Kosten-Nutzen-Analyse in der umweltökonomischen Bewertung |
| Department | Faculty 2 - Environment and Natural Sciences |
| Responsible Staff Member | Prof. Dr. rer. pol. Wätzold, Frank |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | Every winter semester |
| Credits | 6 |
| Learning Outcome | To be able to apply economic thinking to solve environmental and resource management problems with a focus on cost-benefit analysis (CBA) and on cost-effective management and policy solutions. |
| Contents | <ul style="list-style-type: none"> • Economic principles (for non-economists) • Why does market failure exist in the case of environmental goods? • Methodology of CBA • Theory of CBA • Cost Assessment • Theory and methods of benefit valuation • Risk and uncertainty in CBA |
| Recommended Prerequisites | None |
| Mandatory Prerequisites | none |
| Forms of Teaching and Proportion | Lecture - 2 hours per week per semester Seminar - 2 hours per week per semester Self organised studies - 120 hours |

Module 42417 Methods of Water Resources Management

assign to: Modules with the Focus on Environmental Economics, Planning and Law

Studienrichtung / Vertiefung: Umweltökonomie, -planung und -recht

Study programme Environmental and Resource Management

| Degree | Module Number | Module Form |
|-------------------|---------------|---------------------|
| Master of Science | 42417 | Compulsory elective |

| | |
|---|---|
| Modul Title | Methods of Water Resources Management Methoden der Wasserbewirtschaftung |
| Department | Faculty 2 - Environment and Natural Sciences |
| Responsible Staff Member | Prof. Dr. rer. nat. Hinz, Christoph |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | Every summer semester |
| Credits | 6 |
| Learning Outcome | At the end of the module the student are able to apply methods to assess and to balance the components of the water cycle and to derive properties of surface and subsurface catchments with respect to runoff generation and water yield. They can simulate hydrological responses of the water balance components to different inputs. |
| Contents | Elements of the water balance as a function of space and time; determination of available surface and groundwater resources; management practices for surface and groundwater resources; application of statistic, stochastic and deterministic methods in the fields of watershed modeling, system hydrology, reservoir management, flood prediction and integrative resources management, isotopic hydrology |
| Recommended Prerequisites | None |
| Mandatory Prerequisites | none |
| Forms of Teaching and Proportion | Lecture - 2 hours per week per semester Exercise - 2 hours per week per semester Self organised studies - 120 hours |
| Teaching Materials and Literature | <ul style="list-style-type: none"> • Handouts and reading list • Manual and tutorial of the modeling programme |
| Module Examination | Continuous Assessment (MCA) |
| Assessment Mode for Module Examination | <ul style="list-style-type: none"> • Assessment report, max. 3 pages text without figures and tables - 40% |

| | |

| | <ul style="list-style-type: none">• Exam, 80 minutes - 60% |
| Evaluation of Module Examination | Performance Verification – graded |
| Limited Number of Participants | none |
| Remarks | The module will not be offered in the summer semester of 2026. |
| Module Components | Summer semester: <ul style="list-style-type: none">• 240630 Lecture Methods of Water Resources Management - Lecture part• 240631 Seminar/Exercise Methods of Water Resources Management - Practical part |
| Components to be offered in the Current Semester | No assignment |

Module 43406 Municipal Solid Waste Management

assign to: Modules with the Focus on Environmental Economics, Planning and Law

Studienrichtung / Vertiefung: Umweltökonomie, -planung und -recht

Study programme Environmental and Resource Management

| Degree | Module Number | Module Form |
|-------------------|---------------|---------------------|
| Master of Science | 43406 | Compulsory elective |

| | |
|---|--|
| Modul Title | Municipal Solid Waste Management Siedlungsabfallwirtschaft |
| Department | Faculty 2 - Environment and Natural Sciences |
| Responsible Staff Member | Prof. Dr. habil. Abendroth, Christian |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | Every winter semester |
| Credits | 6 |
| Learning Outcome | After a short introduction of general aspects of waste properties, waste collection and regulations focusing on a sustainable waste management concept, students will be made familiar with several aspects of processing for fulfilling the legislative requirements for recycling, treatment or an appropriate deposition on a landfill. Students should learn to develop appropriate technological solutions for municipalities or industrial branches in their home countries. |
| Contents | <p>Theoretical part: From the cradle to the grave: Generation, waste properties and challenges, collection, transportation, transfer, treatment, final disposal. Overview of today's main managerial and technical solutions. Efficiency of waste management systems. Derivation of guidelines for appropriate waste management, examples: Waste avoidance, useful waste management, waste to energy, landfill-oriented processing of waste, waste to raw material. Overview of mechanical, thermal and biological processing.</p> <p>Practical training/seminar: The main focus of the practical part is sorting of residual waste. The students will gain practical experience in waste management, anaerobic digestion and composting. The seminar includes the presentation of results produced during the practical part.</p> |
| Recommended Prerequisites | Basic course in waste management is recommended. |
| Mandatory Prerequisites | none |

| | |
|---|---|
| Forms of Teaching and Proportion | Lecture - 3 hours per week per semester Practical training - 1 hours per week per semester Self organised studies - 120 hours |
| Teaching Materials and Literature | Literature lists will be handed out during the lectures. |
| Module Examination | Continuous Assessment (MCA) |
| Assessment Mode for Module Examination | <ul style="list-style-type: none">• Written examination, 75 min. (2/3)• in preparation for practical training (teamwork-5 students per group): 20 min presentation with minimum 15 presentation slides (1/3) |
| Evaluation of Module Examination | Performance Verification – graded |
| Limited Number of Participants | 30 |
| Remarks | none |
| Module Components | <ul style="list-style-type: none">• 238197 Lecture Municipal Solid Waste Management• 238136 Examination Municipal Solid Waste Management• 238115 Seminar/practical training - Waste Management |

Module 12261 Ecological Excursion

assign to: Modules with the Focus on Environmental Sciences

Studienrichtung / Vertiefung: Umweltwissenschaften

Study programme Environmental and Resource Management

| Degree | Module Number | Module Form |
|-------------------|---------------|---------------------|
| Master of Science | 12261 | Compulsory elective |

| | |
|---|---|
| Modul Title | Ecological Excursion Ökologische Exkursion |
| Department | Faculty 2 - Environment and Natural Sciences |
| Responsible Staff Member | Prof. Dr. rer. nat. Birkhofer, Klaus |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | Every winter semester |
| Credits | 12 |
| Learning Outcome | <p>The Ecological Excursion module provides hands-on experience of biodiversity threats and conflicts and basic ecological adaptations to dryland conditions.</p> <p>Part "Ecological Excursion: Seminar" The seminar introduces students to the main components of terrestrial dryland ecosystems and provides a forum for discussion of topics relevant to the field trip. Students will learn about:</p> <ul style="list-style-type: none"> • biodiversity crisis and threats • human-wildlife conflicts • German colonial history • competent use of English <p>Part "Ecological Excursion: Excursion" The Ecological Excursions provide a hands-on experience that combines elements of scientific expeditions, teamwork projects and taxonomic identification of organisms. Students will learn about:</p> <ul style="list-style-type: none"> • independent and team-oriented ecological project work • adaptations of animals and plants to local conditions • poverty alleviation and food security • geological and hydrological conditions and processes • ecological concepts such as food webs, species inventories, sampling theory |
| Contents | <p>Part "Ecological Excursion: Seminar"</p> <ul style="list-style-type: none"> • Fauna and Flora (plants, vertebrates, invertebrates) |

- contemporary ecological challenges (biodiversity conservation, climate change, invasive species, ecosystem services)
- contemporary social challenges (human wildlife conflicts, poaching, food security, colonial history)

The seminar classes are organised as 8 double blocks of lectures by the lecturer and seminar presentations by the students during the semester. Lectures will be complemented by discussions and individual contributions from students. Self-organised work is required, in particular the preparation of seminar presentations and the acquisition of previously discussed content for the field trip.

Part "Ecological Excursion: Excursion"

- study design and hypothesis testing
- multidisciplinary teamwork
- communication skills

The field trip will last up to 16 days.

| | |
|---|--|
| Recommended Prerequisites | none |
| Mandatory Prerequisites | none |
| Forms of Teaching and Proportion | Lecture - 1 hours per week per semester Seminar - 2 hours per week per semester Excursion - 10 hours per week per semester Self organised studies - 165 hours |
| Teaching Materials and Literature | Relevant literature and equipment needed during the field trip will be provided to the participants. |
| Module Examination | Continuous Assessment (MCA) |
| Assessment Mode for Module Examination | Part "Ecological Excursion: Seminar" One oral presentation, 15 min followed by discussion (50%) Part "Ecological Excursion: Excursion" An individual log of a pre-assigned field day (25%) and a species list of a pre-assigned taxonomic group after the field day (25%, one list for every two students participating). |
| Evaluation of Module Examination | Performance Verification – graded |
| Limited Number of Participants | 18 |
| Remarks | The excursion to Namibia is associated with costs for participants (around 2.500 €). In previous years, stipends were available for qualified students to reduce the costs. PLEASE NOTE: The module can only be offered with a minimum number of 8 participants! If fewer than 8 participants register for the module, the module must be cancelled. |
| Module Components | <ul style="list-style-type: none"> • 240708 Lecture/Seminar Ecological Excursion: Seminar • 240709 Excursion Ecological Excursion: Excursion |

Module 12942 Introduction to Climate Variability and Climate Change Projections

assign to: Modules with the Focus on Environmental Sciences

Studienrichtung / Vertiefung: Umweltwissenschaften

Study programme Environmental and Resource Management

| Degree | Module Number | Module Form |
|-------------------|---------------|---------------------|
| Master of Science | 12942 | Compulsory elective |

| | |
|---|--|
| Modul Title | Introduction to Climate Variability and Climate Change Projections Einführung in Klimavariabilität und Klimaänderungsprojektionen |
| Department | Faculty 2 - Environment and Natural Sciences |
| Responsible Staff Member | Dr. rer. nat. Will, Andreas |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | Every winter semester |
| Credits | 6 |
| Learning Outcome | The students shall be made familiar with natural climate variability and the expected climate change in selected regions. They shall be enabled to understand and to use the results of Climate System Models. In this way a sound basis for climate impact assessment in different regions will be provided. |
| Contents | <p>Part Lecture:</p> <ol style="list-style-type: none"> 1. Climate state and climate variables 2. Physical basis of <ul style="list-style-type: none"> • 1. climate system dynamics • 2. anthropogenic climate change 3. Observational evidence of anthropogenic climate change 4. Design and history of climate system models <ul style="list-style-type: none"> • 1. Global Climate System Models • 2. Regional Climate System Models • 3. Statistical Climate Change Signal Models 5. Climate Change Signal in selected regions • 2. Uncertainties of Climate Change Signals • 3. Climate sensitivity • 4. Reliability of climate projections |

8. Climate System Model bias correction and Climate impact modelling
Part Exercise:

Exercises supporting the understanding of the lectures and the ability to use Climate System Model results are introduced by the lecturer. These exercises are to be solved by the students in form of self-organized studies. The solutions will be presented and discussed by the students during the exercise.

| | |
|---|---|
| Recommended Prerequisites | Basic skills in mathematics, classical mechanics and thermodynamics are expected, Advanced skills in vector calculus and tensor analysis, statistics and discrete mathematics, in fluid mechanics and thermodynamics are very helpful in gaining understanding of the lectures and provide a sound basis for solving the exercises. |
| Mandatory Prerequisites | none |
| Forms of Teaching and Proportion | Lecture - 2 hours per week per semester Exercise - 2 hours per week per semester Self organised studies - 120 hours |
| Teaching Materials and Literature | Climate Change 2013: The Physical Science Basis, Working Group 1 Contribution to the fifth Assessment Report of the IPCC, Editor: IPCC. Further literature together with lecture and exercise materials are made available in electronic form during the semester. |
| Module Examination | Continuous Assessment (MCA) |
| Assessment Mode for Module Examination | <ul style="list-style-type: none"> • Solution of 3 exercises (50%) • Written examination, 45 Min. (50%) |
| Evaluation of Module Examination | Performance Verification – graded |
| Limited Number of Participants | none |
| Remarks | No offer in winter semester 2024/2025. |
| Module Components | none |
| Components to be offered in the Current Semester | No assignment |

Module 12949 Geoecology

assign to: Modules with the Focus on Environmental Sciences

Studienrichtung / Vertiefung: Umweltwissenschaften

Study programme Environmental and Resource Management

| Degree | Module Number | Module Form |
|-------------------|---------------|---------------------|
| Master of Science | 12949 | Compulsory elective |

Modul Title

Geoecology

Geoökologie

Department

Faculty 2 - Environment and Natural Sciences

Responsible Staff Member

Dr.-Ing. Repmann, Frank

Language of Teaching / Examination

English

Duration

1 semester

Frequency of Offer

Every semester

Credits

6

Learning Outcome

Rationale

Geoecology is an interdisciplinary science that integrates the geosciences with the life sciences. The purpose of this module is to extend the basic knowledge of geoecology with respect to anthropogenically induced challenges. Selected issues of soil science and applied soil protection, and related ecological problems will be reflected. Furthermore, the fundamentals of environmental toxicology with regard to adverse effects of chemicals on living systems will be taught.

Lecture:

The lecture of ecotoxicology deals with the potentially harmful impact of chemicals, present as pollutants in the environment, to living organisms with particular focus on soil. In this course students will learn about:

- aspects of geoecology
- basic concept of ecotoxicology
- existing natural and synthetic chemicals
- influence of industrial and agricultural development/processes with regard to chemicals in the environment
- fate of chemicals (distribution, uptake, accumulation and possible degradation)
- detection and risk assessment of contamination

Exercise/Practical training:

The exercise/practical training offers a practical approach, which is necessary to understand the fundamentals of geoecological research.

Students will learn about:

- study design and planning
- field sampling
- laboratory analyses
- preparing a scientific report

Contents

Part 1: Lecture:

- goals and definitions
- classes/groups of chemicals and their potential negative impacts on the environment
- routes of entry of these chemicals into the environment and relevance
- fate of chemicals
- general principles of ecotoxicology -> toxicity -> dose-response relationships -> reception
- factors that can possibly influence the toxicity of environmental chemicals
- investigation methods

- o measurement and assessment of basic site/soil parameters
- o selected toxicity tests
- o risk assessment
 - special investigation methods and selected case studies
 - phytoremediation
 - two short tests (approx. 30 minutes each)

Part 2: Exercise/Practical training, practical work in the field and laboratory:

- study design/problem formulation
- sampling in the field
- laboratory analysis
- writing a technical report

Recommended Prerequisites

Knowledge in chemistry, biology and soil science

Mandatory Prerequisites

none

Forms of Teaching and Proportion

Lecture - 2 hours per week per semester
Exercise - 2 hours per week per semester
Self organised studies - 120 hours

| Modul Title | Geopedology Geopedologie |
| Department | Faculty 2 - Environment and Natural Sciences |
| Responsible Staff Member | Prof. Dr. phil. Raab, Thomas |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | Every winter semester |
| Credits | 6 |
| Learning Outcome | Geopedology deals with an integrative approach of soil science, geomorphology and geology. Students will learn the main factors and processes controlling soil formation and soil properties as well as landform evolution. The significance of both past and modern human impacts for ecosystems will be shown. Attention is paid to natural and anthropogenic processes of landscapes development in the mid-latitudes during the Late Pleistocene and Holocene. |
| Contents | Fundamentals in Pedology Fundamentals in Geomorphology Soil-landscape relationships Methods in Geopedology |
| Recommended Prerequisites | Knowledge in Quaternary Science, Geology, Soil Science or Physical Geography |
| Mandatory Prerequisites | none |
| Forms of Teaching and Proportion | Lecture - 2 hours per week per semester Seminar - 2 hours per week per semester Self organised studies - 120 hours |
| Teaching Materials and Literature | none |

Module 13046 Microclimates

assign to: Modules with the Focus on Environmental Sciences

Studienrichtung / Vertiefung: Umweltwissenschaften

Study programme Environmental and Resource Management

| Degree | Module Number | Module Form |
|-------------------|---------------|---------------------|
| Master of Science | 13046 | Compulsory elective |

| | |
|---|---|
| Modul Title | Microclimates Mikroklimata |
| Department | Faculty 2 - Environment and Natural Sciences |
| Responsible Staff Member | Prof. Dr. rer. nat. Trachte, Katja |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | Every summer semester |
| Credits | 6 |
| Learning Outcome | The module offers in-depth insight into spatio-temporal atmospheric phenomena with special reference to urban areas and their periphery. Students acquire a basic knowledge of cross-scale processes and mechanisms related to local (topo-) climates, get the competence to carry out climatological analysis in space and time applying IT-based methodologies such as statistical analyses and machine learning approaches. |
| Contents | <p>In the lecture professional aspects of microclimates are addressed, such as:</p> <ul style="list-style-type: none"> • definition of microclimates • physical systems • differences in atmospheric conditions • influence of elevation and land use types • radiation budget • UHI • local scale wind systems and ventilation • ABL and NBL <p>The exercise consists of two parts: Part 1 Exercises</p> <ul style="list-style-type: none"> • analysis of spatio-temporal atmospheric data, e.g. in-situ measurements and spatial-explicit data • IT-based training using GIS and programming languages such as Python • Statistical analysis and machine learning approaches |

| | |
|---|--|
| | <p>Part 2 Field campaign:</p> <ul style="list-style-type: none"> • one coherent field campaign including measurements of microclimatological conditions |
| Recommended Prerequisites | Basic knowledge in atmospheric sciences and climatology, basic knowledge in statistics |
| Mandatory Prerequisites | none |
| Forms of Teaching and Proportion | <p>Lecture - 2 hours per week per semester Exercise - 2 hours per week per semester Excursion - 12 hours Self organised studies - 108 hours</p> |
| Teaching Materials and Literature | <p>Recommended literature: Thomas Foken: Micrometeorology. Springer, Berlin, 2017. Roger G. Barry: Microclimate and Local Climate. Cambridge University Press, 2016.</p> |
| Module Examination | Continuous Assessment (MCA) |
| Assessment Mode for Module Examination | <ol style="list-style-type: none"> 1. Weekly exercises in form of data analyses and visualization (30%) 2. Submission of a research project (70%), 8-10 pages; c. 2000-3000 words |
| Evaluation of Module Examination | Performance Verification – graded |
| Limited Number of Participants | none |
| Remarks | none |
| Module Components | <p>Lecture – Microclimates Exercise - Microclimates Field campaign - Microclimates</p> |
| Components to be offered in the Current Semester | <p>240115 Lecture Microclimates - 2 Hours per Term 240118 Exercise/Practical training Microclimates - 2 Hours per Term</p> |

Module 13221 Land surface - Atmosphere Interactions

assign to: Modules with the Focus on Environmental Sciences

Studienrichtung / Vertiefung: Umweltwissenschaften

Study programme Environmental and Resource Management

| Degree | Module Number | Module Form |
|-------------------|---------------|---------------------|
| Master of Science | 13221 | Compulsory elective |

| | |
|---|--|
| Modul Title | Land surface - Atmosphere Interactions Landoberflächen - Atmosphären Interaktion |
| Department | Faculty 2 - Environment and Natural Sciences |
| Responsible Staff Member | Prof. Dr. rer. nat. Trachte, Katja |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | Every winter semester |
| Credits | 6 |
| Learning Outcome | The module offers fundamental knowledge of physical processes and methodologies related to land surface – atmosphere interactions and its relevance in the context of climate change, e.g. carbon and water cycle, factors of changes in surface energy fluxes, soil-vegetation-atmosphere transport, ecophysiological interactions. Students get the competence to assess relevant aspects related to global change as well as to apply IT-based approaches. |
| Contents | In the lecture professional aspects of land surface – atmosphere interactions are addressed, such as: <ul style="list-style-type: none"> · turbulence and the development of PBL structure · carbon cycle · water availability · water use efficiency · ecophysiology · measurement techniques, e.g. eddy-covariance · remote sensing · modeling approaches In the exercise the knowledge gained will be applied using the programming language Python to trainee statistical data analyses (e.g. spatial data mining, machine learning approaches, GLM) and visualization in the field of atmospheric / environmental sciences. |
| Recommended Prerequisites | none |
| Mandatory Prerequisites | none |

| | |
|---|---|

Module 13298 Basics for Freshwater Management

assign to: Modules with the Focus on Environmental Sciences

Studienrichtung / Vertiefung: Umweltwissenschaften

Study programme Environmental and Resource Management

| Degree | Module Number | Module Form |
|-------------------|---------------|---------------------|
| Master of Science | 13298 | Compulsory elective |

| | |
|---|---|
| Modul Title | Basics for Freshwater Management Grundlagen des Gewässermanagements |
| Department | Faculty 2 - Environment and Natural Sciences |
| Responsible Staff Member | Prof. Dr. rer. nat. habil. Martin-Creuzburg, Dominik |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | Every winter semester |
| Credits | 6 |
| Learning Outcome | Students understand freshwaters as ecosystems and know the ecological principles underlying ecological management and how to differentiate between naturally and anthropogenically introduced variability in freshwater ecosystems. They know the main groups of freshwater organisms, and understand the functioning and biogeochemical role of lake and stream ecosystems and their role in landscapes. Specifically, students understand how freshwater organisms achieve the freshwater ecosystem services that humans require. Students know the main anthropogenic impacts on freshwater resources. They understand the consequences of these impacts through their interaction with ecological processes. Students will thus be able to evaluate the consequences of major impacts to aquatic organisms and ecosystem functioning and related those to the European Water Framework Directive as the base for evaluation and management of freshwater resources. |
| Contents | Physical and chemical properties of water. Running water ecosystems: Characteristics, variability and typology, connected functional compartments and main groups of organisms, ecosystem functioning, matter transformation and ecosystem services. Ponds and lakes: Genesis and typology, biogeochemistry of water and sediment, habitats and organisms; lake shores and macrophyte ecology. Main water quality problems related to agriculture, forestry, urbanization and mining; eutrophication, acidification, salinization, siltation, contamination, effects of neobiota; hydromorphological degradation of streams and rivers; loss of ecosystem services in degraded freshwaters; expected impacts of climate change. Principles of sustainable water |

management; principles of lake diagnosis, elementary modeling of lake quality, quality assessment and evaluation as prerequisites for mitigation and restoration; EU Water Framework Directive; overview on strategies to conserve and improve impacted freshwaters.

| | |
|---|--|
| Recommended Prerequisites | Basics in environmental sciences, ecology or similar. |
| Mandatory Prerequisites | none |
| Forms of Teaching and Proportion | Lecture - 3 hours per week per semester Exercise - 1 hours per week per semester Self organised studies - 120 hours |
| Teaching Materials and Literature | none |
| Module Examination | Continuous Assessment (MCA) |
| Assessment Mode for Module Examination | Written examination (80 minutes) in the first examination period. The exam will contribute 75 % to the module grade. The grades for exercises, tests and assignments which have to be handed in online via Moodle will contribute 25% to the module grade. |
| Evaluation of Module Examination | Performance Verification – graded |
| Limited Number of Participants | none |
| Remarks | <p>The module is taught as online course via Moodle. The course follows a blended learning concept in a strict weekly rhythm. It consists of A) self-organized study of the learning material of the week (learning and lecture videos, reading material, exercises) and B) live meetings in the online classroom for clarification of open questions and discussions to reflect and consolidate the understanding of the past week’s learning material.</p> <p>The blended learning in weekly rhythm requires continuous participation. Enrolment in the Moodle course is mandatory for this module. The Moodle enrolment key will be provided in the first lecture which will take place in presence on 18 October.</p> <p>The <u>module is a mandatory prerequisite for the course Freshwater Restoration Ecology (module 42505)</u> which is offered in summer semester.</p> |

Module 13371 ERM-Research-Module

assign to: Modules with the Focus on Environmental Sciences

Studienrichtung / Vertiefung: Umweltwissenschaften

Study programme Environmental and Resource Management

| Degree | Module Number | Module Form |
|-------------------|---------------|-------------|
| Master of Science | 13371 | Mandatory |

| | |
|---|---|
| Modul Title | ERM-Research-Module ERM-Research-Modul |
| Department | Faculty 2 - Environment and Natural Sciences |
| Responsible Staff Member | Prof. Dr. rer. nat. Beckmann, Michael |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | Every semester |
| Credits | 18 |
| Learning Outcome | <p>For students with a strong interest and capability in research, the ERM-Research-Module is an advanced study alternative in the Master's programme. This variant includes in particular the independent preparation of a two-semester research project. The students learn how to work on scientific problem formulation, the target-oriented implementation of experimental approaches and the scientific evaluation and presentation of the results.</p> <p>The students carry out research-orientated tasks which they work on increasingly independently and in exchange with other project participants under the intensive supervision of experienced researchers. The main scope is the development of scientific problem-solving skills by means of information gathering as well as the application of theoretical knowledge acquired in small group advanced seminars.</p> |
| Contents | The supervising lecturers select suitable topics from their subject areas and intensively support the students in learning the necessary subject-specific and interdisciplinary skills. The contents of the module are regularly adapted in line with ongoing research projects in the participating disciplines. |
| Recommended Prerequisites | Depending on the topic excellent knowledge in mathematics/statistics, chemistry, biology and/or social as well as environmental sciences is required. |
| Mandatory Prerequisites | none |
| Forms of Teaching and Proportion | Lecture - 2 hours per week per semester |

| | |
|---|---|
| | Exercise - 2 hours per week per semester Self organised studies - 480 hours |
| Teaching Materials and Literature | To be named by supervisor. |
| Module Examination | Continuous Assessment (MCA) |
| Assessment Mode for Module Examination | Written project report with all factual information about the work (as hard copy and digital form) and a presentation. Written report, 20-30 pages (75%) Presentation of results, 30 min. (25%) |
| Evaluation of Module Examination | Performance Verification – graded |
| Limited Number of Participants | none |
| Remarks | The module "ERM Research Module" can only be repeated once if it is not passed. It is one of the practical study sections and is therefore excluded from the free trial regulation. |
| Module Components | <ul style="list-style-type: none">• ERM-Research Lecture• ERM-Research Exercise |

| Department | Faculty 2 - Environment and Natural Sciences |
| Responsible Staff Member | Prof. Dr. rer. nat. Hinz, Christoph |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | Every winter semester |
| Credits | 6 |
| Learning Outcome | Students are able to analyse hydrological processes and to obtain and interpret hydrological data from hydrological annuals and internet sources. They can use standard procedures for hydrological dimensioning, probability analysis and extreme value statistics (especially flood statistics). They are furthermore able to apply basic methods of deterministic simulation of hydrological processes, modelling and modelling. |
| Contents | Description of hydrological processes as well as evaluation and presentation of associated data; adaptation of distribution functions to runoff data, derivation of flood design values with different data; design precipitation. Basic system hydrological description approaches; application of system hydrology for river basin modelling. Deepening of the methods in exercises with practical examples. |
| Recommended Prerequisites | knowledge of hydrology |
| Mandatory Prerequisites | none |
| Forms of Teaching and Proportion | Lecture - 2 hours per week per semester Seminar - 2 hours per week per semester Self organised studies - 120 hours |
| Teaching Materials and Literature | Lecture presentations, scripts for the exercises, literature references and questionnaires are made available via the online portal Moodle. Further literature: |

| Frequency of Offer | Every winter semester |
| Credits | 6 |
| Learning Outcome | By the end of the module students are able to develop a research question within the academic field of Science and Technology Studies and create and present a research design, as well as identify and make use of appropriate sources of empirical material for your analysis, furthermore to identify, select and compare appropriate concepts and methods relating to an interdisciplinary research field and analyse changes in fields of science and technology with respect to knowledge forms. |
| Contents | This module presents central theories and approaches developed in Science and Technology Studies. The module focuses on questions about disciplining and undisciplining knowledge, the corresponding epistemic and ontological perspectives and the political economy of science. It explores concepts being concerned about shifting concepts of disciplinarity, such as interdisciplinarity, transdisciplinarity or postdisciplinarity. |
| Recommended Prerequisites | Knowledge from the courses <ul style="list-style-type: none"> • Technik in Wissenschaft und Gesellschaft • Philosophy of Science in Practice |
| Mandatory Prerequisites | none |
| Forms of Teaching and Proportion | Lecture - 2 hours per week per semester |

| | |
|---|--|
| | Seminar - 2 hours per week per semester Self organised studies - 120 hours |
| Teaching Materials and Literature | Literature and learning materials are given in the course description. |
| Module Examination | Continuous Assessment (MCA) |
| Assessment Mode for Module Examination | <ul style="list-style-type: none">• short scientific essay, max. 4000 words (45%)• scientific review, max. 2500 words (40%)• presentation, max. 15 minutes (15%) <p>The oral part of the examination can be done digitally or as a virtual meeting if the conditions for an examination in presence are not given.</p> |
| Evaluation of Module Examination | Performance Verification – graded |
| Limited Number of Participants | none |
| Remarks | German-speaking teachers are available if required. Further information on this can be found in the course description. |

Module 13657 How to Talk about Nature?

assign to: Modules with the Focus on Environmental Sciences

Studienrichtung / Vertiefung: Umweltwissenschaften

Study programme Environmental and Resource Management

| Degree | Module Number | Module Form |
|-------------------|---------------|---------------------|
| Master of Science | 13657 | Compulsory elective |

| | |
|---|--|
| Modul Title | How to Talk about Nature? Wie über Natur sprechen? |
| Department | Faculty 5 - Business, Law and Social Sciences |
| Responsible Staff Member | Prof. Dr. rer. nat. phil. habil. Schwarz, Astrid |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | Every winter semester |
| Credits | 6 |
| Learning Outcome | After passing the module, students understand main philosophical theories of “nature”, interrogate the concept of “nature” and expose its numerous ideological and cultural manifestations. They identify the main ethical dimensions of “nature”, and its crosscultural and political dimensions. Additionally they understand the power of narratives and storytelling to shape our environmental present and future by insight into reading, writing, and visual practices about “nature”. |
| Contents | <p>“How to talk about nature?” is closely linked to the question of what “nature” is, how it is construed and in which way we act with, in or against it. It is a question that is ontological and epistemological at the same time, it is about how we imagine nature “to be” and how we conceive knowledge about nature. The ideas about this entwinement are manifold over time and in space, different cultures have developed different ways of thinking and also practices of how to deal with a culture/nature distinction. Another important conceptual issue is how nature and technology are related, in contemporary debates for instance, “nature” is often identified with “environment” and as such inescapably entangled with its cultural, political, and technological context. Is the use of technology in “nature” then a threat or an opportunity to build a genuinely sustainable world?</p> <p>This module seeks to answer these and other questions, by approaching “nature” with variously grounded historical and contemporary theoretical approaches. For example, the concept of “nature” was differently interpreted in ancient times, compared to modern contemporary cultures. We will probe the different usage, the scope of historical and cross-cultural depth, the semantics, the images/</p> |

imaginaries, and finally, the logical coherence of “nature” concepts. This variety of topics means that the assigned readings will draw from a wide range of sources. With respect to handle current ecological and technocultural problems, a conscious reflection about “nature” seems to be required. Thus, the module should be also seen, in part, as a way to gain insight into contemporary reading, writing, and visual practices about “nature”.

Participation in the accompanying excursion is encouraged.

Module 13663 Environmental Soil Science and Plant Nutrition

assign to: Modules with the Focus on Environmental Sciences

Studienrichtung / Vertiefung: Umweltwissenschaften

Study programme Environmental and Resource Management

| Degree | Module Number | Module Form |
|-------------------|---------------|---------------------|
| Master of Science | 13663 | Compulsory elective |

| | |
|---|--|
| Modul Title | Environmental Soil Science and Plant Nutrition Umweltbezogene Bodenkunde und Pflanzenernährung |
| Department | Faculty 2 - Environment and Natural Sciences |
| Responsible Staff Member | Prof. Ph. D. Rütting, Louise |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | Every winter semester |
| Credits | 6 |
| Learning Outcome | <p>After completing this course, the student will be able to understand:</p> <ul style="list-style-type: none"> • fundamental chemical properties and processes in soil • scientific methods employed for the remediation of contaminated soils • natural and anthropogenic factors and processes in soil and plant systems • basic principles of plant nutrient uptake • nutrient assimilation of plants with focus on the nitrogen and phosphate cycle • main sources and sinks of greenhouse gases |
| Contents | <p>Part 1: Soil Science/Soil Chemistry Introduction to the principles of soil chemistry, including properties of soil minerals and their interactions with essential plant nutrients. We will focus on soil solution dynamics, sorption processes, and redox reactions. In addition, students will gain insights into soil water dynamics and the importance of soil organic matter.</p> <p>Part 2: Plant Nutrition The student learns about the importance of mineral nutrition in plants, including essentiality, availability, and applications, as well as their management and control strategies. We have a focus on plant nutrient uptake, the rhizosphere and nutrient starvation. The student will gain insight into the different processes of bioremediation and phytoremediation dealing with contamination problems in a scientific and ecological way. In a seminar we will discuss numerous remediation approaches.</p> |

| | |
|---|--|
| | An excursion followed by a laboratory practical will combine the plant nutrition and soil sections. |

Module 13737 Practical Course Aquatic Ecology

assign to: Modules with the Focus on Environmental Sciences

Studienrichtung / Vertiefung: Umweltwissenschaften

Study programme Environmental and Resource Management

| Degree | Module Number | Module Form |
|-------------------|---------------|---------------------|
| Master of Science | 13737 | Compulsory elective |

| | |
|---|--|
| Modul Title | Practical Course Aquatic Ecology Praktikum Gewässerökologie |
| Department | Faculty 2 - Environment and Natural Sciences |
| Responsible Staff Member | Prof. Dr. rer. nat. habil. Martin-Creuzburg, Dominik |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | Every summer semester |
| Credits | 6 |
| Learning Outcome | The students know basic methods for the investigation of standing and running waters and can apply them independently. They can effectively use different data and information in order to answer research questions or develop hypotheses. The students can compare and assess the possibilities and limitations of methods and data in aquatic ecology. |
| Contents | Recording and evaluation of abiotic and biotic water quality parameters within the framework of a case study on a watercourse and a standing water body. Field measurements with different probes, limnological sampling techniques and laboratory analyses, process measurements, experimental approaches, microscopy of aquatic organisms, data analyses and preparation of reports. |
| Recommended Prerequisites | 13298 Basics for Freshwater Management or/and 42505 Freshwater Restoration Ecology. Commitment and willingness for active participation, self-organized work, teamwork and self-study. |
| Mandatory Prerequisites | none |
| Forms of Teaching and Proportion | Practical training - 80 hours Self organised studies - 100 hours |
| Teaching Materials and Literature | The necessary materials for the practical part will be provided. |
| Module Examination | Continuous Assessment (MCA) |

| | |
|---|--|
| Assessment Mode for Module Examination | <p>Oral presentations and written reports of the results for each part, Running Waters and Standing Waters.</p> <p>Part Running Waters:</p> <ul style="list-style-type: none"> • 15 min presentation on one of the methods to be applied (10%) • Course participation (10%) • Presentation of results and written report (ca. 3 - 5 pages without figures and/or tables, 11 pt font, line spacing no more than 1.2) (30%) <p>Part Standing Waters:</p> <ul style="list-style-type: none"> • 15 min presentation on one of the methods to be applied (10%) • Course participation (10%) • Presentation of results and written report (ca. 3 - 5 pages without figures and/or tables, 11 pt font, line spacing no more than 1.2) (30%) |
| Evaluation of Module Examination | Performance Verification – graded |
| Limited Number of Participants | 12 |
| Remarks | <p>The course will take place as a block course during the lecture-free period of the 2026 summer semester from August 17 to September 4, 2026. The number of participants is limited to 12 students. The Standing water part will take place from August 17 to 21, 2026, at the Research Station of the Department of Aquatic Ecology in Bad Saarow. This requires all students to stay overnight in a youth hostel in Bad Saarow. The accommodation costs of ~€150 will be paid by the students themselves. In order to process the booking and deposit for the accommodation and to guarantee binding participation in the module, a deposit of €100 is required. The payment terms will be communicated to students by the Department of Aquatic Ecology after they have registered for the module with the Examination Office.</p> <p>The Department of Aquatic Ecology will decide on final admission to the module. This depends on the student's qualifications and receipt of the deposit for accommodation. Only after receiving a positive decision from the Department of Aquatic Ecology will the student be given access to the course page on Moodle.</p> |

Module 13822 Biodiversity of Terrestrial Arthropods

assign to: Modules with the Focus on Environmental Sciences

Studienrichtung / Vertiefung: Umweltwissenschaften

Study programme Environmental and Resource Management

| Degree | Module Number | Module Form |
|-------------------|---------------|---------------------|
| Master of Science | 13822 | Compulsory elective |

| | |
|---|---|
| Modul Title | Biodiversity of Terrestrial Arthropods Biodiversität terrestrischer Arthropoden |
| Department | Faculty 2 - Environment and Natural Sciences |
| Responsible Staff Member | Prof. Dr. rer. nat. Birkhofer, Klaus |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | Every summer semester |
| Credits | 6 |
| Learning Outcome | <p>The module Biodiversity of Terrestrial Arthropods provides an overview of the taxonomy and ecology of arthropods in terrestrial ecosystems with a mandatory 5-day excursion during the semesters excursion week and student projects.</p> <p>Part "Biodiversity: Lecture" The lectures introduce the taxonomy of terrestrial invertebrates with diagnostics for major orders and highlight the ecology of selected case taxa. Students will learn about</p> <ul style="list-style-type: none"> • Phylogenetic relationships of major terrestrial invertebrate orders • Identification and diagnostics of major terrestrial invertebrate orders • Ecology of major terrestrial invertebrate orders <p>Part "Biodiversity: Seminar" The seminars are based on student presentations of an assigned scientific publication focusing on the ecology of selected terrestrial invertebrate taxa. Students will learn about</p> <ul style="list-style-type: none"> • Interpretation of scientific articles • Ecology of a selected case taxon • Summarizing and presenting scientific results <p>Part "Biodiversity: Excursion" Students will learn:</p> |

- Ecological field work methods with a focus on biodiversity assessment
- Identification of arthropods and use of taxonomic determination keys

Contents

The courses will take students to an ecological field station in Brandenburg for five days during the semesters excursion week. A small fee of 10€ will be collected from all participating students to cover some of the costs.

Part "Biodiversity: Lecture"

- Terrestrial arthropod taxonomy
- Terrestrial arthropod ecology

Part "Biodiversity: Seminar"

- Threats to terrestrial arthropod biodiversity
- Status of terrestrial arthropod biodiversity
- Solutions to biodiversity loss in terrestrial arthropod communities

Part "Biodiversity: Excursion"

- Field methods to sample biodiversity with a focus on terrestrial arthropods
- Diagnostic criteria to identify major terrestrial arthropod orders in the field and laboratory

Recommended Prerequisites

For international study programmes and master students module "41217 General and Applied Ecology" or for BSc students module "41102 Ecology". For German study programmes module „14324 Terrestrische Ökologie" or module „41203 Allgemeine Ökologie".

Mandatory Prerequisites

none

Forms of Teaching and Proportion

Lecture - 1 hours per week per semester
Seminar - 1 hours per week per semester
Excursion - 32 hours
Self organised studies - 118 hours

Teaching Materials and Literature

Part "Biodiversity: Lecture"

The class is organized as a weekly lecture introducing major orders of terrestrial arthropods. Lecture-like presentations are complemented by discussions. Self-organized work, in particular acquiring more detailed knowledge of the taxonomic groups is required.

E-books

- Piper R, What Insects Do, and Why
- Schowalter TD, Insect ecology: an ecosystem approach
- Beutel RG & Friedrich F, Insect morphology and phylogeny
- Resh VH, Encyclopaedia of insects
- New TR, Insect species conservation: Ecology, biodiversity, and conservation
- Samways MJ, Insect diversity conservation

Part "Biodiversity: Seminar"

A scientific paper focusing on the ecology of a major order of terrestrial invertebrates is assigned to students. The content of the paper will then be presented as an oral presentation in the seminar by the students following the lecture. All seminar topics and material is provided.

Part " Biodiversity: Excursion"

Students will write a report on an assigned excursion. Participation in these half-day ecological excursions is mandatory. All material for the excursions is provided.

E-books

Brock PD, Britain's Insects: A Field Guide to the Insects of Great Britain and Ireland

Santos JC, Measuring arthropod biodiversity: a handbook of sampling methods

Module Examination

Continuous Assessment (MCA)

Assessment Mode for Module Examination

Part "Biodiversity: Seminar"

One oral presentation, 25 min + 20 min discussion (50%)

Part " Biodiversity: Excursion "

One written report summarising the results from the 5-day excursion (50%)

Evaluation of Module Examination

Performance Verification – graded

Limited Number of Participants

none

Remarks

The courses will take students to an ecological field station in Brandenburg for five days during the semesters excursion week. A small fee of **10 €** will be collected from all participating students to cover some of the costs.

Module 13833 Analysis and Modelling of Human-Environment Systems

assign to: Modules with the Focus on Environmental Sciences

Studienrichtung / Vertiefung: Umweltwissenschaften

Study programme Environmental and Resource Management

| Degree | Module Number | Module Form |
|-------------------|---------------|---------------------|
| Master of Science | 13833 | Compulsory elective |

| | |
|---|---|
| Modul Title | Analysis and Modelling of Human-Environment Systems Analyse und Modellierung von Mensch-Umwelt-Systemen |
| Department | Faculty 2 - Environment and Natural Sciences |
| Responsible Staff Member | Prof. Dr. Müller, Birgit |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | Every winter semester |
| Credits | 6 |
| Learning Outcome | Upon completing the course, students will be able to: <ul style="list-style-type: none"> • Identify key features of coupled human-environment systems and apply this knowledge to interdisciplinary case studies. • Understand core principles of complex adaptive systems. • Design, implement, and analyse agent-based models to investigate human-environment interactions. |
| Contents | How do deforestation, urban expansion, or climate policies impact ecosystems and communities? Understanding these complex interactions is key to tackling today's urgent environmental challenges. This course provides an introduction to modelling human-environment systems, emphasizing the intricate feedback loops between human activities and the biophysical world—across local, regional, and global scales. The module has two main focus areas. First, students will explore the key characteristics of coupled socio-environmental systems. We will read and discuss interdisciplinary research papers on applied case studies and theoretical considerations and examine how models can bridge science and real-world decision-making — whether in climate change adaptation, land-use planning, or resource management. Specific topics include to understand how human behaviour is represented in models, which role play social networks and how common pool resource management can support sustainable outcomes. Guest speakers will enrich the course with diverse perspectives and practical insights. |

Second, students will acquire hands-on experience in agent-based modelling using the NetLogo programming environment designed for beginners. They will learn how to conceptualize, build, and analyse computer models to simulate interactions within socio-environmental systems. Additionally, an introduction to statistical data analysis in R will provide essential tools for model evaluation and interpretation.

Module 13837 Agro-Ecosystems Analysis and Modelling

assign to: Modules with the Focus on Environmental Sciences

Studienrichtung / Vertiefung: Umweltwissenschaften

Study programme Environmental and Resource Management

| Degree | Module Number | Module Form |
|-------------------|---------------|---------------------|
| Master of Science | 13837 | Compulsory elective |

| | |
|---|--|
| Modul Title | Agro-Ecosystems Analysis and Modelling Analyse und Modellierung von Agrarökosystemen |
| Department | Faculty 2 - Environment and Natural Sciences |
| Responsible Staff Member | Prof. Dr. Webber, Heidi |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | Every summer semester |
| Credits | 6 |
| Learning Outcome | <ul style="list-style-type: none"> • describe and analyze agricultural systems using system analysis terms and concepts; • develop a simple dynamic model of a process affecting crop development or growth using the R programming language; • conduct model calibration, evaluation and sensitivity analysis; • design a model based assessment of the performance and sustainability of a cropping system; and • critically reflect on scientific studies reporting simulation results. |
| Contents | <p>With the range of challenges facing crop production systems, systems analysis and simulation modelling are frequently applied analytical tools to assess improved crop management and improve understanding of how crop systems functioning. Systems approaches represent a scientific concept in which the real world is divided into systems. These systems are captured into models Applied at a range of scales (canopy, (sub-) field, agroecosystem, regional or global), they can be used as scientific tools to test hypothesis of crop behavior, informing and aiding in experimental interpretation. The course consists of three main learning areas: systems dynamics and model development; model performance & model evaluation; model applications.</p> |
| Recommended Prerequisites | Good quantitative skills, basic knowledge of statistics, basic knowledge of scripting in R |

Module 14299 Advances in Biogeochemistry and Pedology

assign to: Modules with the Focus on Environmental Sciences

Studienrichtung / Vertiefung: Umweltwissenschaften

Study programme Environmental and Resource Management

| Degree | Module Number | Module Form |
|-------------------|---------------|---------------------|
| Master of Science | 14299 | Compulsory elective |

| | |
|---|--|
| Modul Title | Advances in Biogeochemistry and Pedology Aktuelle Forschungen in Biogeochemie und Bodenkunde |
| Department | Faculty 2 - Environment and Natural Sciences |
| Responsible Staff Member | Prof. Dr. phil. Raab, Thomas Prof. Ph. D. Rütting, Louise |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | On special announcement |
| Credits | 6 |
| Learning Outcome | Students will learn scientific method application, hypothesis formulation, critical reflection of results and academic discussion in fields of Soil-Plant-Systems and Geopedology. |
| Contents | Recent developments in the field of soil-ecosystem-landscape related research. Invited external speakers, as well as BTU PostDocs, PhD and Master students, present advances in scientific investigations in natural and human-made ecosystems. The focus is on the evolution, properties, and functions of the pedosphere and interacting processes with the biosphere. Research topics cover soil organic matter, biogeochemistry, plant nutrient uptake, stable isotope tracing, phosphorus and nitrogen cycling, soils in space and time, soil morphology and classification, and the impact of past and modern land use on soil landscapes. |
| Recommended Prerequisites | Basic knowledge in Biogeochemistry and Soil Science |
| Mandatory Prerequisites | none |
| Forms of Teaching and Proportion | Seminar - 2 hours per week per semester Consultation - 2 hours per week per semester Self organised studies - 120 hours |
| Teaching Materials and Literature | will be announced at the beginning of the event |
| Module Examination | Continuous Assessment (MCA) |

| | |
|---|--|
| Assessment Mode for Module Examination | Students must write a series of short tests at the end of each seminar presentation (25 % of the module grade), they must ask weekly questions on each seminar topic (25 % of the module grade) and they must give a short poster presentation (5 minutes) at the end of the seminar (50 % of the module grade). |
| Evaluation of Module Examination | Performance Verification – graded |
| Limited Number of Participants | 24 |
| Remarks | No offer in Summer 2026 and Winter 2026/27 |

Module 14387 Applied Limnology, Management and Modelling of Lakes and Reservoirs

assign to: Modules with the Focus on Environmental Sciences

Studienrichtung / Vertiefung: Umweltwissenschaften

Study programme Environmental and Resource Management

| Degree | Module Number | Module Form |
|-------------------|---------------|---------------------|
| Master of Science | 14387 | Compulsory elective |

| | |
|---|--|
| Modul Title | Applied Limnology, Management and Modelling of Lakes and Reservoirs Angewandte Limnologie, Management und Modellierung von Seen und Stauseen |
| Department | Faculty 2 - Environment and Natural Sciences |
| Responsible Staff Member | Prof. Dr. rer. nat. Rinke, Karsten |
| Language of Teaching / Examination | English |
| Duration | 2 semesters |
| Frequency of Offer | Every winter semester |
| Credits | 6 |
| Learning Outcome | <ul style="list-style-type: none"> · Ecosystem services and anthropogenic uses of lakes and reservoirs · Translating scientific knowledge into tailored water management concepts for standing waters · Assessment methods and systems analysis of lakes and reservoirs · Stressors of lakes and reservoirs, dominant drivers, and potential solution approaches |
| Contents | <p>This module puts basic knowledge in natural sciences in general and aquatic ecology and biogeochemistry in particular into context with state of the art management concepts for lakes and reservoirs. This includes also an analysis of major ecosystem services and anthropogenic uses of standing waters as well as dominant stressors and drivers of deterioration.</p> <p>We will employ quantitative methods including modelling and explicitly address the unit of water body and catchment. The following main topics are in the focus of the module:</p> <ul style="list-style-type: none"> · Human uses and ecosystem services of lakes and reservoirs · Morphology and physical structure · Ecosystem dynamics and productivity · Nutrient cycles and biogeochemical processes · Eutrophication |

| | |
|---|---|
| | <ul style="list-style-type: none">· Climate Change· Other stressors: Acidification, dryout, invasive species....· Assessment and monitoring of lakes and reservoirs· Water quality prediction and management |
| Recommended Prerequisites | Basics for Freshwater Management (13298) or comparable knowledge in limnology, Expertise in R is very helpful |
| Mandatory Prerequisites | none |
| Forms of Teaching and Proportion | Lecture - 2 hours per week per semester Exercise - 2 hours per week per semester Excursion - 20 hours Self organised studies - 100 hours |
| Teaching Materials and Literature | Literature and exercise materials are provided via Moodle. |
| Module Examination | Continuous Assessment (MCA) |
| Assessment Mode for Module Examination | <ul style="list-style-type: none">• Four selected exercises of our weekly seminars are used for calculating a grade (80%)• Seminar presentation (10 minutes) (20%) |
| Evaluation of Module Examination | Performance Verification – graded |
| Limited Number of Participants | none |
| Remarks | Wintersemester: Lecture (2 SWS) + exercise (2SWS) Summersemester: Excursion (20 Std insgesamt) |
| Module Components | <ul style="list-style-type: none">• Lecture• Exercise• Excursion |
| Components to be offered in the Current Semester | No assignment |

Module 14496 Applied Biostatistics for Environmental Data

assign to: Modules with the Focus on Environmental Sciences

Studienrichtung / Vertiefung: Umweltwissenschaften

Study programme Environmental and Resource Management

| Degree | Module Number | Module Form |
|-------------------|---------------|---------------------|
| Master of Science | 14496 | Compulsory elective |

| | |
|---|---|
| Modul Title | Applied Biostatistics for Environmental Data Angewandte Biostatistik für Umweltdaten |
| Department | Faculty 2 - Environment and Natural Sciences |
| Responsible Staff Member | Dr. Djoudi, El Aziz |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | Every winter semester |
| Credits | 6 |
| Learning Outcome | This module will provides a theoretical introduction to data analysis and results interpretation, statistical methods and tools for environmental and biological sciences, as well as applied tools with a particular focus on R programming (R software). |
| Contents | <p>Part 1. Introduction to experimental design Design principles Random sampling, block design, nested design, split-plot... Replication and Pseudoreplication</p> <p>Part 2. Introduction to R Introduction to the essentials of R Basics: Syntax, packages, writing codes & functions Data handling, analysis and visualisation (graphs and tables) Exercises</p> <p>Part 3. Distributions, Parameters and Estimators Data classification & distribution Measures of central tendency: mean, median ... Measures of variability: variance and standard deviation Likelihood and Akaike Information Criterion Exercises</p> <p>Part 4. Univariate analysis T-test and ANOVA (Analysis of variance) Correlation and regression analysis Non parametric analysis (Wilcoxon, Mann-Witney-U, Kruskal-Wallis) linear models & introduction to mixed models Exercises</p> |

| | |
|---|---|
| | <p>Part 5. Multivariate analysis Principal component analysis (PCA) Non-metric multidimensional scaling (NMDS) Redundancy analysis (RDA) & Canonical correspondence analysis (CCA) Exercises</p> |
| Recommended Prerequisites | none |
| Mandatory Prerequisites | none |
| Forms of Teaching and Proportion | <p>Lecture - 2 hours per week per semester Exercise - 2 hours per week per semester Self organised studies - 120 hours</p> |
| Teaching Materials and Literature | <p>Zuur, A. F., Ieno, E. N. & Smith, G. M. 2007 Analysing ecological data. New York Gotelli, N. J. & Ellison A. M. 2013 A primer of ecological statistics. Sunderland Dormann, C. 2020 Environmental Data Analysis: An Introduction with Examples in R. Cham Lakicevic, M., Povak, N. & Reynolds, K. M. 2020 Introduction to R for terrestrial ecology: basics of numerical analysis, mapping, statistical tests and advanced application of R, Cham Wilke C.O. 2019 Fundamentals of Data Visualization, O'Reilly Wickham H& Golemund G, 2017 R for Data Science, O'Reilly</p> |
| Module Examination | Continuous Assessment (MCA) |
| Assessment Mode for Module Examination | <p>- 10 Exercises during the courses (50%) - Individual project presentation, 15 min. (50%)</p> |
| Evaluation of Module Examination | Performance Verification – graded |
| Limited Number of Participants | 25 |
| Remarks | Please bring your laptop! |
| Module Components | 240740 Lecture/Exercise: Applied Biostatistics for environmental data |
| Components to be offered in the Current Semester | No assignment |

Module 14824 Automated biodiversity surveying tools and methods

assign to: Modules with the Focus on Environmental Sciences

Studienrichtung / Vertiefung: Umweltwissenschaften

Study programme Environmental and Resource Management

| Degree | Module Number | Module Form |
|-------------------|---------------|---------------------|
| Master of Science | 14824 | Compulsory elective |

| | |
|---|--|
| Modul Title | Automated biodiversity surveying tools and methods Automatisierte Instrumente und Methoden zur Erfassung der biologischen Vielfalt |
| Department | Faculty 2 - Environment and Natural Sciences |
| Responsible Staff Member | Prof. Dr. rer. nat. Beckmann, Michael |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | Every winter semester |
| Credits | 6 |
| Learning Outcome | <p>By the end of this course, students will be able to:</p> <ul style="list-style-type: none"> - Demonstrate knowledge of the principles and methods of surveying different aspects of biodiversity. - Apply key concepts of survey design to ecological studies. - Apply AI tools (e.g. Birdnet) to automatically classify species from recordings <p>Practical learning outcomes</p> <ul style="list-style-type: none"> - Design a biodiversity survey for a given taxa using automated monitoring tools, from setup through data collection and analysis to scientific presentation. - Give a presentation on the proposed biodiversity study, including a background on the chosen taxon and region and justification of the experimental design. |
| Contents | <p>This course combines lectures and hands-on sessions (with automated monitoring devices such as Audiomoth and InsectDetect) in groups to provide a basic introduction to the different methods used to survey and monitor biodiversity.</p> <p>These lectures and hands-on sessions introduce the students to the most common (and some emerging) methods to survey terrestrial biodiversity. This should provide students with a basic understanding of the methods they might use in future industrial (e.g. ecological consultancy) or research work. This includes methods such as audio recording of bats and birds, insect monitoring with pan traps and pitfall traps or camera trapping for larger mammals. The advantages, disadvantages and challenges of each method will be introduced.</p> |

| | |
|---|--|
| | Practical examples using audio recorders (including deployment and data analysis) will be undertaken. |
| Recommended Prerequisites | Basic knowledge of ecology |
| Mandatory Prerequisites | None |
| Forms of Teaching and Proportion | Lecture - 1 hours per week per semester Excursion - 15 hours Self organised studies - 150 hours per week per semester |
| Teaching Materials and Literature | Teaching materials will be uploaded in Moodle. Scientific papers: A selection of scientific papers will be decided prior to course start. https://doi.org/10.1016/j.baae.2025.03.004 https://doi.org/10.1371/journal.pone.0295474 https://doi.org/10.1016/j.mambio.2019.11.003 https://doi.org/10.1002/ece3.11157 https://doi.org/10.1111/j.2041-210X.2010.00062.x |
| Module Examination | Continuous Assessment (MCA) |
| Assessment Mode for Module Examination | <ol style="list-style-type: none"> 1. continuous assessment of activities during class (50 %) ; Regular in-class quizzes and/or reflections (appr. 10 minutes each time) Presentation of selected readings or practical activities conducted during the course. 2. Final written exam, 90 min (50 %) |
| Evaluation of Module Examination | Performance Verification – graded |
| Limited Number of Participants | 15 |
| Remarks | none |
| Module Components | <ul style="list-style-type: none"> • 240323 Lecture: Biodiversity surveying tools and methods • 240324 Practical work: Biodiversity recording and analysis with Audiomoth and/or other tools. Analysing audio (or other) data. |
| Components to be offered in the Current Semester | No assignment |

Module 14827 Forest Change Ecology and Research Fundamentals

assign to: Modules with the Focus on Environmental Sciences

Studienrichtung / Vertiefung: Umweltwissenschaften

Study programme Environmental and Resource Management

| Degree | Module Number | Module Form |
|-------------------|---------------|---------------------|
| Master of Science | 14827 | Compulsory elective |

| | |
|---|--|
| Modul Title | Forest Change Ecology and Research Fundamentals Ökologie des Waldes und Grundlagen der Forschung |
| Department | Faculty 2 - Environment and Natural Sciences |
| Responsible Staff Member | Dr. Ibáñez, Theresa Simona |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | Every winter semester |
| Credits | 6 |
| Learning Outcome | <p>By the end of this course, students will be able to:</p> <p>Theoretical learning outcomes</p> <ul style="list-style-type: none"> - Demonstrate knowledge of forest disturbance ecology, with a particular focus on wildfire impacts, forest regeneration processes, and climate change effects. - Evaluate how forest management practices in Europe influence ecological regeneration and nutrient cycling under changing climate conditions. - Understand the principles of scientific communication. - Apply key concepts of experimental design to ecological studies. <p>Practical learning outcomes</p> <ul style="list-style-type: none"> - Collaborate in small groups to perform all aspects of experimental work, from setup through data collection and analysis to scientific presentation. - In group develop and communicate research ideas by during a workshop session designing a small hypothetical experiment, including a <p>Page 2 of 5</p> <ul style="list-style-type: none"> research question, hypotheses, experimental design. - Interpret and apply basic statistical methods commonly used in ecological research. |
| Contents | This course combines lectures, seminars, workshops, and hands-on experiments in group to provide a comprehensive understanding of forest ecology and scientific research methods. The course is structured |

around the following key components:

Lectures (followed by short multi- option quiz):

Lecture series on disturbance ecology and the impacts of climate change on forest regeneration and nutrient cycling

These lectures explore how various ecological disturbances and changing climatic conditions affect forest regeneration and nutrient cycling. The lectures cover both natural and human-induced disturbances (e.g., wildfire, forest management), examining their individual and combined impacts on forest ecosystems.

Special

emphasis is placed on understanding how climate change influences the frequency, intensity, and

ecological consequences of various disturbances. The lectures integrate theory with current

research to highlight the complex interactions between disturbance regimes, forest recovery, and nutrient dynamics.

Experimental design and statistical analysis

Core principles of designing ecological experiments and applying basic statistical tests (e.g., ANOVA, linear regression, correlation).

Scientific communication

Basic understanding of how to write and communicate research.

Practical Components

Practical experiment (each student chooses one of the two following experiments):

1. Greenhouse experiment- drought impact on seedling growth (2 groups with 4 students in each group)

One tree species (*P. sylvestris* or *Betula*) x 2 drought treatments x 4 replicates, total 8 pots. The course leader will pre-germinate the seeds. Students then plant and maintain the experiment during a couple of weeks. Seedlings are harvested, above and belowground biomass and aboveground height are obtained. Statistical tests are performed, followed by a written report of maximum 5 pages (excluding references), structured as a scientific paper and presented in class. Supporting paper: Ibáñez et al., 2022.

2. LICOR Soil respiration experiment- variances of soil moisture and temperature impact on soil respiration (2 groups with 4 students in each group).

Students, together with the course leader, install five collars on campus and measure, over a gradient, soil respiration, temperature and moisture. Statistical tests are performed, followed by a written report of maximum 5 pages (excluding references), structured as a scientific paper and presented in class. Supporting paper: Kelley et al., 2022.

Workshop in experimental design

Workshop session: Each group of 2-3 students will, after introduction, design a small hypothetical ecological experiment comprising a research question, hypotheses, experimental design. Presented and discussed by the end of the workshop in class.

Supporting literature includes textbooks and recent peer-reviewed papers relevant to each experimental activity.

Recommended Prerequisites

Basic knowledge of forest ecology

Mandatory Prerequisites

None

| | |
|---|--|
| Forms of Teaching and Proportion | Exercise - 2 hours per week per semester Seminar - 2 hours per week per semester Practical training - 2 hours per week per semester Self organised studies - 90 hours |

Module 14828 Isotopes in Environmental Science

assign to: Modules with the Focus on Environmental Sciences

Studienrichtung / Vertiefung: Umweltwissenschaften

Study programme Environmental and Resource Management

| Degree | Module Number | Module Form |
|-------------------|---------------|---------------------|
| Master of Science | 14828 | Compulsory elective |

| | |
|---|---|
| Modul Title | Isotopes in Environmental Science Isotopen in Umweltwissenschaften |
| Department | Faculty 2 - Environment and Natural Sciences |
| Responsible Staff Member | Dr. rer. nat. Rütting, Tobias |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | Every winter semester |
| Credits | 6 |
| Learning Outcome | Lectures and textbook reading: the students will be familiar with the major stable isotopes of carbon, nitrogen, oxygen and hydrogen used in studies of Environmental Science. They understand fractionation and mixing processes, the use of stable isotopes as tracers in process studies, and they have knowledge on instrumentation and standards. Exercises: the students are able to plan and conduct a project using stable isotopes, including data analysis. Seminar: The students understand the structure of scientific publications and are able to critically analyze and evaluate research results. |
| Contents | The course offers a broad introduction to the use of stable isotopes (SI) in Environmental Science. Basic knowledge on terminology, fractionation processes, isotope mixing, instrumentation and standards. The topics covered are plants and photosynthesis; atmosphere and greenhouse gases; soil nutrient cycles; water isotopes in the landscape. Selected aspects will be further explored in the accompanying seminar using scientific publications and orally presented by the students. |
| Recommended Prerequisites | Chemistry I: General and Inorganic Chemistry Or equivalent |
| Mandatory Prerequisites | none |
| Forms of Teaching and Proportion | Lecture - 2 hours per week per semester Exercise - 2 hours per week per semester Self organised studies - 120 hours |

| | |
|---|--|
| Teaching Materials and Literature | Mandatory textbook: Cotrufo & Pressler (2023) A primer on stable isotopes in ecology. Oxford University Press Additional literature will be handed out |
| Module Examination | Continuous Assessment (MCA) |
| Assessment Mode for Module Examination | 1. 8 assignments from exercises (40%) 2. Oral presentation based on scientific publication, ca. 15-20 min. (30%) 3. Written final assessment, 4-5 pages (30 %) |
| Evaluation of Module Examination | Performance Verification – graded |
| Limited Number of Participants | 25 |
| Remarks | none |
| Module Components | 1. Lecture Isotopes in Environmental Science (240294) 2. Exercises Isotopes in Environmental Science (240293) |
| Components to be offered in the Current Semester | No assignment |

Module 14874 An Introduction to Basic Algorithms to Solve Environmental and Resource Management Optimization Problems

assign to: Modules with the Focus on Environmental Sciences

Studienrichtung / Vertiefung: Umweltwissenschaften

Study programme Environmental and Resource Management

| Degree | Module Number | Module Form |
|-------------------|---------------|---------------------|
| Master of Science | 14874 | Compulsory elective |

| | |
|---|---|
| Modul Title | An Introduction to Basic Algorithms to Solve Environmental and Resource Management Optimization Problems Eine Einführung in grundlegende Algorithmen zur Lösung von Optimierungsproblemen im Umwelt- und Ressourcenmanagement |
| Department | Faculty 2 - Environment and Natural Sciences |
| Responsible Staff Member | Dr. rer. nat. Sturm, Astrid-Utte |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | Every winter semester |
| Credits | 6 |
| Learning Outcome | After participating in the module, students should <ul style="list-style-type: none"> • have a basic understanding of programming principles, • have a basic understanding of graphs and graph algorithm • be able to identify optimization problems in the field of environmental and research management and • be able to match real world optimization problems to introduced algorithmic solutions. |
| Contents | An introduction to basic algorithms which can be used for typical optimization problems in environmental and research management. For example, where to place wind turbines in a given landscape while optimizing given parameters e.g. maximizing energy generation or minimizing biodiversity disturbance. We start with a short introduction / refresher of basic programming principles and focus during the course on understanding and enabling the use of existing algorithms as graph algorithms or when to use other approximation algorithms like greedy. All algorithms are introduced and discussed in the context of environmental and resource related optimization problems. <ol style="list-style-type: none"> 1. Basic programming principles 2. Graph algorithms 3. Greedy algorithms 4. Knapsack problem 5. Dynamic Programming |

| Modul Title | Invasion Ecology Invasionsökologie |
| Department | Faculty 2 - Environment and Natural Sciences |
| Responsible Staff Member | Prof. Dr. rer. nat. Beckmann, Michael |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | Every summer semester |
| Credits | 6 |
| Learning Outcome | <p>By the end of this course, students will be able to:</p> <ul style="list-style-type: none"> - Explain key concepts and definitions in invasion ecology, including distinctions between native, non-native, and invasive species. - Describe major pathways, stages, and mechanisms of biological invasions across terrestrial and aquatic ecosystems. - Summarize and compare central hypotheses and theoretical frameworks in invasion ecology from both invader and recipient community perspectives. - Analyze case studies of novel interactions between invasive and native species, including plant–insect, host–parasite, and predator–prey systems. - Evaluate ecological and socio-economic impacts of invasive species using empirical evidence. - Assess and compare management strategies for invasive species, including prevention, monitoring, risk assessment, and biological control. |

| | |
|---|---|
| Contents | This module introduces invasion ecology as a key field addressing the ecological, evolutionary, and socio-economic consequences of species introductions. It covers pathways and stages of biological invasions, definitions and classifications of invasive species, and major invasion hypotheses from both invader and recipient community perspectives. The course examines invasive species across terrestrial, freshwater, and marine ecosystems, with a focus on their impacts on biodiversity, ecosystem functioning, and human well-being. Special emphasis is placed on novel species interactions, including plant–insect, host–parasite, and predator–prey systems, and on evolutionary processes shaping invasions. Through lectures and case-study-based group projects, students engage with predictive models, risk assessment protocols, and management strategies such as eradication, monitoring, and biological control. The module also critically discusses potential benefits of introduced species and future challenges under global environmental change. |
| Recommended Prerequisites | Basic knowledge of ecology |
| Mandatory Prerequisites | None |
| Forms of Teaching and Proportion | Seminar - 4 hours per week per semester Self organised studies - 120 hours |

|---|--|
| Modul Title | Environmental Modelling Umweltmodellierung |
| Department | Faculty 2 - Environment and Natural Sciences |
| Responsible Staff Member | Prof. Dr. rer. nat. Hinz, Christoph |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | Every summer semester |
| Credits | 6 |
| Learning Outcome | <p>Part 1 Introduction Modelling of the Environment: The lecture aims at providing basic understanding of dynamical modeling of the environment. Basic concepts of systems analysis will be introduced. In particular the students will get familiar with basic concepts of modeling of Atmo-, Hydro-, Bio- and Pedosphere, learn about the relevant processes, main interactions, model sensitivities and uncertainties.</p> <p>Part 2 Environmental modeling exercises: In the numerical exercise the students will learn writing simplified models and apply more complex and state of the art numerical models of selected processes or subsystems of the environment. They will learn, how to analyse and to interpret the results. They will get familiar with multiprocessor computers and with the computational needs of environmental modelling.</p> |
| Contents | <p>Part 1 Introduction to Modelling of the Environment: An introduction to modeling of the environment will be given. Concepts of modeling of the Atmo-, Hydro-, Bio- and Pedosphere will be presented. In particular the identification of relevant processes within and interactions between the spheres and their modeling will be highlighted. The opportunities of making predictions will be demonstrated by application to environmental problems like hazards, climate change and pollution. The model sensitivities and uncertainties will be discussed.</p> <p>Part 2 Environmental modeling exercises: Each student gets the opportunity to write an own numerical model of selected processes in the environment. More complex state of the</p> |

art numerical models describing the behavior of a whole subsystem of the environment shall be applied to answer some detailed questions. The numerical model results shall be presented and discussed with the course participants.

| | |

Module 42505 Freshwater Restoration Ecology

assign to: Modules with the Focus on Environmental Sciences

Studienrichtung / Vertiefung: Umweltwissenschaften

Study programme Environmental and Resource Management

| Degree | Module Number | Module Form |
|-------------------|---------------|---------------------|
| Master of Science | 42505 | Compulsory elective |

| | |
|---|--|
| Modul Title | Freshwater Restoration Ecology Ökologie der Gewässerrenaturierung |
| Department | Faculty 2 - Environment and Natural Sciences |
| Responsible Staff Member | Prof. Dr. rer. nat. habil. Martin-Creuzburg, Dominik |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | Every summer semester |
| Credits | 6 |
| Learning Outcome | Students know the basic principles and main methods of freshwater restoration and are able to assess the potential, but also the limitations, of restoration measures to mitigate or reverse human impacts. Students will be familiar with current methods and guidelines for evaluating surface water quality and restoration, as well as eco-engineering approaches to water management. Students will know cases of best-practice restoration and management. |
| Contents | Anthropogenic impact and current state of lakes, reservoirs, streams and rivers, quality assessment. Ecosystem services as target of management and restoration, impact of climate change on water bodies, strategies and planning of freshwater restoration, stream system rehabilitation and its limits, measures for in-stream habitat and floodplain enhancement, rehabilitation measures in the catchment, costs and benefits of restoration projects. General concepts and guidelines of lake and reservoir management, restoration principles, eco-engineering measures and other aspects of modern management of natural and artificial standing waters. Case studies of restoration and best management practice will be presented and discussed. |
| Recommended Prerequisites | Participation at module: • 13298 Basics for Freshwater Management |
| Mandatory Prerequisites | none |
| Forms of Teaching and Proportion | Lecture - 2 hours per week per semester Seminar - 2 hours per week per semester |

| | |
|---|---|
| | Excursion - 20 hours Self organised studies - 100 hours |
| Teaching Materials and Literature | Materials supplied via Moodle: Lecture notes, learning videos, literature for additional reading, key scientific articles and book chapters. |
| Module Examination | Continuous Assessment (MCA) |
| Assessment Mode for Module Examination | Written examination (80 minutes) at the end of the semester covering the main topics of the lectures and the seminar talks. Students will need to perform a seminar on an individual topic (20 min presentation and 20 min discussion). The exam result will contribute 65%, the presentation and post-presentation discussion 25%, active seminar participation 10%. Handing in protocols of the two excursions will gain extra points (2,5% of the total score for each protocol). |
| Evaluation of Module Examination | Performance Verification – graded |

Module 11510 Hydrology & Hydraulics

assign to: Modules with the Focus on Environmental Engineering

Studienrichtung / Vertiefung: Umwelttechnik

Study programme Environmental and Resource Management

| Degree | Module Number | Module Form |
|-------------------|---------------|---------------------|
| Master of Science | 11510 | Compulsory elective |

| | |
|---|--|
| Modul Title | Hydrology & Hydraulics Hydrologie & Hydraulik |
| Department | Faculty 2 - Environment and Natural Sciences |
| Responsible Staff Member | Prof. PD Dr.-Ing. habil. Molkenthin, Frank |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | Every summer semester |
| Credits | 6 |
| Learning Outcome | Understanding the typical modelling processes in hydrology & hydraulics such as GIS based catchment analysis, rainfall/runoff analysis, open channel hydraulics and hydrodynamic analysis of rivers. Practical experiences in application of related software tools. Basic ability to evaluate and present modelling results in respect to theoretical background, model assumptions and limits as well as uncertainties in data. |
| Contents | The module has four main parts. First part deals with the DEM based topographic analysis of a catchment as pre-processing for a hydrological analysis including catchment delinieation, rainfall interpolation, land-use and soil data analysis using GIS for a given case study. Second part deals with the hydrological rainfall/runoff analysis using different analysis methods. The lectures present the theoretical background of the analysis methods and their application in projects. Students will perform a EXCEL/Hec-HMS/Shetran based assignment for a given case study. Third part of the module deals with open channel hydraulics. The lecture presents the theoretical background including engineering assumptions and simplifications. Application examples with manual calculations in comparison to computer-based simulations are introduced and used for training. Fourth part of the module covers computer-based hydrodynamic simulation of river networks for flood management. The lectures present the theoretical background of the hydrodynamic simulation methods (basic differential equations, numerical methods, physical parameters, |

handling of structures such as weirs, calibration, validation, simulation scenarios ...) and their application in projects. Students will perform a software-based assignment for a given case study. All assignments deal with the same case study data set and demonstrate the integrated application of different software tools within a project. Finally, the lectures will give an outlook for 2D flood modelling and related flood risk management.

| | |
|---|---|
| Recommended Prerequisites | Advanced knowledge in mathematics/numerics, physics, fluid mechanics, GIS, ICT and water resource management on master level, experiences in computer based modelling, data management and data analysis |
| Mandatory Prerequisites | none |
| Forms of Teaching and Proportion | Lecture - 3 hours per week per semester Practical training - 3 hours per week per semester Self organised studies - 90 hours |
| Teaching Materials and Literature | Teaching material and a list of recommended literature will be published on the Web page / in Moodle, links will be provided to the participants during the lectures. |
| Module Examination | Continuous Assessment (MCA) |
| Assessment Mode for Module Examination | 1) Four assignments during the semester (each 10% -> four assignments 40%) 2) Written exam (60%) The written exam will be offered two times during the semester (e.g. last week of lecture period and mid of September). Participants can participate in both written exams, in this case the mean value of the two results will be considered as written result for the final mark. To pass the module, participants needs at least 50% summing up the results from the assignments (max. 40%) and from the written exam(s) (max. 60%). |
| Evaluation of Module Examination | Performance Verification – graded |
| Limited Number of Participants | none |
| Remarks | This module is for ERM Master study programme. |

|-------------------------------------|--|
| Modultitel | Numerik in der Geotechnik Numerics in Geotechnics |
| Einrichtung | Fakultät 6 - Architektur, Bauingenieurwesen und Stadtplanung |
| Verantwortlich | Prof. Dr.-Ing. Grandas Tavera, Carlos |
| Lehr- und Prüfungssprache | Deutsch |
| Dauer | 1 Semester |
| Angebotsturnus | jedes Sommersemester |
| Leistungspunkte | 6 |
| Lernziele | Nach Abschluss des Moduls kennen die Studierenden numerische Methoden zur Lösung der typischen Differentialgleichungen in der Geotechnik. Sie sind in der Lage, die Modellierung üblicher geomechanischen Randwertprobleme mit der Methode der Finiten Differenzen und der Methode der Finiten Elementen nachzuvollziehen und ihre Lösung kritisch zu bewerten. Sie können geeignete Stoffgesetze für die numerische Berechnung begründet auswählen und ihren Einfluss auf die Ergebnisse einschätzen. |
| Inhalte | Nachfolgende Inhalte werden themenbezogen vermittelt: <ul style="list-style-type: none"> • Anfangs- und Randwertprobleme in der Bodenmechanik • Finite Differenzen: Zeitintegration, numerische Stabilität, Beispiele • Finite Elemente: schwache Form, Diskretisierung, Randbedingungen, numerische Lösung • Locking, reduzierte Integration, Hour-Glass-Modes • Einführung in die zeitliche Integration von Stoffgesetze: Return-Mapping, explizite und semi-explizite Methode • Einführung in die Diskrete Elemente Methode |
| Empfohlene Voraussetzungen | Grundkenntnisse in Mechanik, Grundbau und Bodenmechanik. |
| Zwingende Voraussetzungen | keine |
| Lehrformen und Arbeitsumfang | Vorlesung - 2 SWS Übung - 2 SWS Selbststudium - 120 Stunden |

| | |

Module 12165 Renewable Energy Technologies for Power Supply

assign to: Modules with the Focus on Environmental Engineering

Studienrichtung / Vertiefung: Umwelttechnik

Study programme Environmental and Resource Management

| Degree | Module Number | Module Form |
|-------------------|---------------|---------------------|
| Master of Science | 12165 | Compulsory elective |

| | |
|---|--|
| Modul Title | Renewable Energy Technologies for Power Supply Energieerzeugung auf Basis erneuerbarer Energien |
| Department | Faculty 3 - Mechanical Engineering, Electrical and Energy Systems |
| Responsible Staff Member | Prof. Dr. rer. nat. Röntzsch, Lars |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | Every winter semester |
| Credits | 6 |
| Learning Outcome | The participants of the module acquire advanced knowledge in the design, operation, and application of renewable energy systems, including solar energy (solar thermal and photovoltaics), wind energy, hydroelectric power, geothermal energy (both near-surface and deep), biomass, and energy storage technologies, with a focus on hydrogen technology. They can analyze and reflect on the interactions between these subfields, considering their technical and ecological implications, and are capable of making scientifically grounded judgments within the discipline. The participants of the module develop the ability to formulate their own research questions and address them using appropriate scientific methods. They can effectively engage in domain-specific and interdisciplinary discussions, presenting complex topics clearly and persuasively to diverse audiences. Additionally, they demonstrate the ability to independently acquire new knowledge and apply it to solve and critically evaluate application- or research-oriented challenges. |
| Contents | Design, operation and use of: <ul style="list-style-type: none"> • Solar energy (photovoltaics, solar thermal) • Wind energy • Geothermal energy (deep and near-surface) • Biomass • Hydroelectric power • Energy storage inclusive hydrogen technology |
| Recommended Prerequisites | <ul style="list-style-type: none"> • A completed bachelor's degree in a relevant field such as engineering, environmental technology, energy and process engineering, or related disciplines. |

Module 13371 ERM-Research-Module

assign to: Modules with the Focus on Environmental Engineering

Studienrichtung / Vertiefung: Umwelttechnik

Study programme Environmental and Resource Management

| Degree | Module Number | Module Form |
|-------------------|---------------|-------------|
| Master of Science | 13371 | Mandatory |

| | |
|---|---|
| Modul Title | ERM-Research-Module ERM-Research-Modul |
| Department | Faculty 2 - Environment and Natural Sciences |
| Responsible Staff Member | Prof. Dr. rer. nat. Beckmann, Michael |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | Every semester |
| Credits | 18 |
| Learning Outcome | <p>For students with a strong interest and capability in research, the ERM-Research-Module is an advanced study alternative in the Master's programme. This variant includes in particular the independent preparation of a two-semester research project. The students learn how to work on scientific problem formulation, the target-oriented implementation of experimental approaches and the scientific evaluation and presentation of the results.</p> <p>The students carry out research-orientated tasks which they work on increasingly independently and in exchange with other project participants under the intensive supervision of experienced researchers. The main scope is the development of scientific problem-solving skills by means of information gathering as well as the application of theoretical knowledge acquired in small group advanced seminars.</p> |
| Contents | The supervising lecturers select suitable topics from their subject areas and intensively support the students in learning the necessary subject-specific and interdisciplinary skills. The contents of the module are regularly adapted in line with ongoing research projects in the participating disciplines. |
| Recommended Prerequisites | Depending on the topic excellent knowledge in mathematics/statistics, chemistry, biology and/or social as well as environmental sciences is required. |
| Mandatory Prerequisites | none |
| Forms of Teaching and Proportion | Lecture - 2 hours per week per semester |

| | |
|---|---|
| | Exercise - 2 hours per week per semester Self organised studies - 480 hours |
| Teaching Materials and Literature | To be named by supervisor. |
| Module Examination | Continuous Assessment (MCA) |
| Assessment Mode for Module Examination | Written project report with all factual information about the work (as hard copy and digital form) and a presentation. Written report, 20-30 pages (75%) Presentation of results, 30 min. (25%) |
| Evaluation of Module Examination | Performance Verification – graded |
| Limited Number of Participants | none |
| Remarks | The module "ERM Research Module" can only be repeated once if it is not passed. It is one of the practical study sections and is therefore excluded from the free trial regulation. |

Module 13515 Advanced Methods in Process, Energy and Systems Engineering

assign to: Modules with the Focus on Environmental Engineering

Studienrichtung / Vertiefung: Umwelttechnik

Study programme Environmental and Resource Management

| Degree | Module Number | Module Form |
|-------------------|---------------|---------------------|
| Master of Science | 13515 | Compulsory elective |

| | |
|---|--|
| Modul Title | Advanced Methods in Process, Energy and Systems Engineering Erweiterte Methoden zur Prozessmodellierung und Optimierung in der Energie- und Verfahrenstechnik |
| Department | Faculty 3 - Mechanical Engineering, Electrical and Energy Systems |
| Responsible Staff Member | Prof. Dr.-Ing. Arellano-Garcia, Harvey |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | Every summer semester |
| Credits | 6 |
| Learning Outcome | The module requires a basic background in calculus and linear algebra, thus allowing easy understanding of mathematical reasoning. In addition, numerous examples in process, energy, environmental and systems engineering will demonstrate key concepts and algorithms. The practical exercises will involve theoretical derivations and small-size numerical problems in modelling systems like matlab, python, octave, GAMS thus putting knowledge into practice. |
| Contents | This module will teach approaches to modelling and optimization frameworks to address the complex process and energy problems, which arise in design and operation of process and energy systems in an integrated way. Moreover, the presented theoretical and methodological concepts are joined conceptionally with optimal designed experiments to adjust the fundamental mathematical models and to validate the developed process concepts. The taught methods are of generic character, and thus, producing optimal design and operational plans for process and energy systems ranging from microscale to mega-scale stages over operative time horizons from milliseconds to years. The approaches to be discussed will mainly be around superstructure-based modelling, mixed-integer linear and nonlinear programming, multiobjective optimization, optimization under uncertainty, and life-cycle assessment. The presented case studies will be around advanced process systems for renewable energy conversion, |

Module 13657 How to Talk about Nature?

assign to: Modules with the Focus on Environmental Engineering

Studienrichtung / Vertiefung: Umwelttechnik

Study programme Environmental and Resource Management

| Degree | Module Number | Module Form |
|-------------------|---------------|---------------------|
| Master of Science | 13657 | Compulsory elective |

| | |
|---|--|
| Modul Title | How to Talk about Nature? Wie über Natur sprechen? |
| Department | Faculty 5 - Business, Law and Social Sciences |
| Responsible Staff Member | Prof. Dr. rer. nat. phil. habil. Schwarz, Astrid |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | Every winter semester |
| Credits | 6 |
| Learning Outcome | After passing the module, students understand main philosophical theories of “nature”, interrogate the concept of “nature” and expose its numerous ideological and cultural manifestations. They identify the main ethical dimensions of “nature”, and its crosscultural and political dimensions. Additionally they understand the power of narratives and storytelling to shape our environmental present and future by insight into reading, writing, and visual practices about “nature”. |
| Contents | <p>“How to talk about nature?” is closely linked to the question of what “nature” is, how it is construed and in which way we act with, in or against it. It is a question that is ontological and epistemological at the same time, it is about how we imagine nature “to be” and how we conceive knowledge about nature. The ideas about this entwinement are manifold over time and in space, different cultures have developed different ways of thinking and also practices of how to deal with a culture/nature distinction. Another important conceptual issue is how nature and technology are related, in contemporary debates for instance, “nature” is often identified with “environment” and as such inescapably entangled with its cultural, political, and technological context. Is the use of technology in “nature” then a threat or an opportunity to build a genuinely sustainable world?</p> <p>This module seeks to answer these and other questions, by approaching “nature” with variously grounded historical and contemporary theoretical approaches. For example, the concept of “nature” was differently interpreted in ancient times, compared to modern contemporary cultures. We will probe the different usage, the scope of historical and cross-cultural depth, the semantics, the images/</p> |

imaginaries, and finally, the logical coherence of “nature” concepts. This variety of topics means that the assigned readings will draw from a wide range of sources. With respect to handle current ecological and technocultural problems, a conscious reflection about “nature” seems to be required. Thus, the module should be also seen, in part, as a way to gain insight into contemporary reading, writing, and visual practices about “nature”. Participation in the accompanying excursion is encouraged.

|---|---|
| Modul Title | Soil Reclamation and Landscape Restoration Bodensanierung und Landschaftsrenaturierung |
| Department | Faculty 2 - Environment and Natural Sciences |
| Responsible Staff Member | Dr. rer. nat. Badorreck, Annika |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | Every summer semester |
| Credits | 6 |
| Learning Outcome | <p>After completing this course the student will be able to understand</p> <ul style="list-style-type: none"> - the social need for management and protection of soils and ecosystems - prevention strategies of soil degradation and its crucial role in global food security - basic definitions and principles of sustainable and climate-smart agriculture, forestry and land management <p>fundamental features and measures of soil reclamation and landscape restoration</p> <ul style="list-style-type: none"> - deduction of restored soils functions, ecosystem functions and ecosystem services. |
| Contents | <p>Scientific content: This course examines principles and strategies for soil reclamation and landscape restoration in tropical and subtropical regions of the Global South. It introduces climate-smart agriculture, forestry and livestock management. Emphasizing sustainable soil and land management, it explains how these practices can mitigate and adapt to climate change. The course also covers Sustainable Land Management (SLM) practices contributing to global goals, particularly SDG target 15.3 on achieving land degradation neutrality. It discusses urban forestry, its ecosystem benefits, and the challenges involved. Additionally, the course addresses soil salinization, proposing strategies for managing its effects on agriculture.</p> <p>Teaching concept: eLearning packages containing thematic lessons were provided to the students in order to engaging students through active self-paced learning. Four online certification tests within these packages account for in total 40% of the modul grade. Seminar: A</p> |

scientific paper covering a topic of the modul is assigned to students. The content of the paper will then be presented as an oral presentation in the seminar at the end of the module by a group of students or as individual followed by a discussion (60% of modul grade).

Module 13833 Analysis and Modelling of Human-Environment Systems

assign to: Modules with the Focus on Environmental Engineering

Studienrichtung / Vertiefung: Umwelttechnik

Study programme Environmental and Resource Management

| Degree | Module Number | Module Form |
|-------------------|---------------|---------------------|
| Master of Science | 13833 | Compulsory elective |

| | |
|---|---|
| Modul Title | Analysis and Modelling of Human-Environment Systems Analyse und Modellierung von Mensch-Umwelt-Systemen |
| Department | Faculty 2 - Environment and Natural Sciences |
| Responsible Staff Member | Prof. Dr. Müller, Birgit |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | Every winter semester |
| Credits | 6 |
| Learning Outcome | Upon completing the course, students will be able to: <ul style="list-style-type: none"> • Identify key features of coupled human-environment systems and apply this knowledge to interdisciplinary case studies. • Understand core principles of complex adaptive systems. • Design, implement, and analyse agent-based models to investigate human-environment interactions. |
| Contents | How do deforestation, urban expansion, or climate policies impact ecosystems and communities? Understanding these complex interactions is key to tackling today's urgent environmental challenges. This course provides an introduction to modelling human-environment systems, emphasizing the intricate feedback loops between human activities and the biophysical world—across local, regional, and global scales. The module has two main focus areas. First, students will explore the key characteristics of coupled socio-environmental systems. We will read and discuss interdisciplinary research papers on applied case studies and theoretical considerations and examine how models can bridge science and real-world decision-making — whether in climate change adaptation, land-use planning, or resource management. Specific topics include to understand how human behaviour is represented in models, which role play social networks and how common pool resource management can support sustainable outcomes. Guest speakers will enrich the course with diverse perspectives and practical insights. |

Second, students will acquire hands-on experience in agent-based modelling using the NetLogo programming environment designed for beginners. They will learn how to conceptualize, build, and analyse computer models to simulate interactions within socio-environmental systems. Additionally, an introduction to statistical data analysis in R will provide essential tools for model evaluation and interpretation.

Module 14069 Biomass and Bioenergy

assign to: Modules with the Focus on Environmental Engineering

Studienrichtung / Vertiefung: Umwelttechnik

Study programme Environmental and Resource Management

| Degree | Module Number | Module Form |
|-------------------|---------------|---------------------|
| Master of Science | 14069 | Compulsory elective |

| | |
|---|--|
| Modul Title | Biomass and Bioenergy Biomasse und Bioenergie |
| Department | Faculty 5 - Business, Law and Social Sciences |
| Responsible Staff Member | Prof. Dr. phil. Hirschl, Bernd |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | Every semester |
| Credits | 6 |
| Learning Outcome | Students are able to understand the multifunctionality of biomass and know the various pathways of biomass conversion into energy. They are prepared to have critical knowledge regarding biomass cultivation for energy generation by discussing social and environmental concerns, like land use or the competition with food chains. After attending the module, students have expertise in interpreting and presenting scientific texts. |
| Contents | Sustainable energy generation is seen as one of the largest present challenges of our society. The module "Biomass and Bioenergy" will discuss climate neutral energy systems, where biomass is a sustainable carbon neutral source of energy. This module is highly interdisciplinary. Topics will include: <ul style="list-style-type: none"> • Overview on biomass production (agriculture and forestry) • Biomass residual waste • Energy conversion technologies • Social and ecological aspects of biomass use • Current bioenergy policies |
| Recommended Prerequisites | none |
| Mandatory Prerequisites | none |
| Forms of Teaching and Proportion | Seminar - 4 hours per week per semester Self organised studies - 120 hours |
| Teaching Materials and Literature | The following literature can be used for preparation: |

- Book: Kaltschmitt, M., ed. (2018) Energy from Organic Materials (Biomass). A Volume in the Encyclopedia of Sustainability Science and Technology, 1439 p. Springer DOI:<https://doi.org/10.1007/978-1-4939-7813-7>
- Book: Srivastava, N., Verma, B. & Mishra, P.K., eds. 2023. Agroindustrial Waste for Green Fuel Application. Springer DOI:<https://doi.org/10.1007/978-981-19-6230-1>
- Journal "Biomass and Bioenergy" (Elsevier)
- Journal "Sustainable Energy Technologies and Assessments" (Elsevier)

Module Examination

Module 14506 Advanced Geophysical Methods in Natural Resource Investigation (ANRI)

assign to: Modules with the Focus on Environmental Engineering

Studienrichtung / Vertiefung: Umwelttechnik

Study programme Environmental and Resource Management

| Degree | Module Number | Module Form |
|-------------------|---------------|---------------------|
| Master of Science | 14506 | Compulsory elective |

| | |
|---|---|
| Modul Title | Advanced Geophysical Methods in Natural Resource Investigation (ANRI) Fortgeschrittene geophysikalische Methoden zur Erkundung natürlicher Ressourcen |
| Department | Faculty 2 - Environment and Natural Sciences |
| Responsible Staff Member | Prof. Dr. rer. nat. Herd, Rainer |
| Language of Teaching / Examination | English |
| Duration | 1 semester |
| Frequency of Offer | Every semester |
| Credits | 6 |
| Learning Outcome | Understand advanced geophysical methods for subsurface exploration. Gain practical skills in applying geophysical methods in real fieldwork scenarios, including magnetometry, ground-penetrating radar (GPR), electrical resistivity tomography (ERT), and electromagnetics for data acquisition and interpretation Learn to process and interpret geophysical data including airborne data. Develop expertise in using specialized software. Evaluate the efficiency of different geophysical methods in various field conditions. Analyze and mitigate common issues encountered during geophysical surveys. |
| Contents | Lecture: The lecture component of this course will provide an overview of advanced geophysical investigation methods used in subsurface exploration. It will cover the principles of magnetometry, ground-penetrating radar (GPR), geoelectrics and electromagnetic methods, along with an introduction to radiometry and its applications in natural resource exploration. Students will learn about data acquisition techniques for both ground and airborne geophysical surveys, and explore the challenges associated with data interpretation. Additionally, the lecture will address typical workflows used in the processing of geophysical data to ensure accurate results. |

Practical Training:

The practical training component will focus on providing hands-on experience in fieldwork, utilizing magnetometry, GPR, geoelectric, electromagnetic instruments. Students will actively participate in data acquisition and analysis using specialized software. They will gain experience in processing, and learn how to apply these methods effectively in real exploration scenarios. Practical training will also include the development of field reports and presentations based on data collected during field activities, helping students to refine their skills in communicating technical results.

Module 42421 Natural Resource Investigation

assign to: Modules with the Focus on Environmental Engineering

Studienrichtung / Vertiefung: Umwelttechnik

Study programme Environmental and Resource Management

| Degree | Module Number | Module Form |
|-------------------|---------------|---------------------|
| Master of Science | 42421 | Compulsory elective |

| | |
|---|---|
| Modul Title | Natural Resource Investigation Rohstofferkundung |
| Department | Faculty 2 - Environment and Natural Sciences |
| Responsible Staff Member | Prof. Dr. rer. nat. Herd, Rainer |
| Language of Teaching / Examination | English |
| Duration | 2 semesters |
| Frequency of Offer | Every winter semester |
| Credits | 6 |
| Learning Outcome | <ul style="list-style-type: none"> • Get to know geological processes and to understand the role of these processes for the formation of natural resources • Become acquainted to the processes leading to the genesis of different raw materials • Study methods and techniques for investigation of natural resources • Use these investigation methods in the field and in the lab • Be able to present working results in an oral presentation and to defend them in an open discussion • Get an insight in the work of a professional exploration company during an excursion |
| Contents | <p>Lecture Prospection and Exploration of Natural Resources The lectures provides an overview about the geological processes which are responsible for the formation of different natural resources including energy resources, metals, industrial minerals and ground water. Methods for the prospection and exploration of these resources are presented using geological, geophysical, geochemical and remote sensing techniques. Advantages and disadvantages of the methods are discussed.</p> <p>Practical training Prospection and Exploration of Natural Resources The focus of this course is the practical training of the prospection and exploration methods in the field and in the lab. Geological, geophysical and remote sensing techniques are used in order to detect e.g. raw material deposits.</p> <p>Lecture/exercise Introduction to Coal Petrology Lecture and practical training at the microscope.</p> |

The lecture provides an overview about the genesis of coal seams and about the microscopic constituents of coal. The maceral concept is introduced. It is shown that coal is also a source of environmental information. The student will do a reconstruction of the paleoenvironment by using microscopic maceral analyses.

Excursion Prospex

Field trip to an active exploration site. Topics: Geological setting, exploration technology, efficiency and costs.

Recommended Prerequisites

- General high school knowledge in physics
- Basics in geology

Mandatory Prerequisites

none

Forms of Teaching and Proportion

Lecture - 3 hours per week per semester
 Exercise - 1 hours per week per semester
 Excursion - 8 hours
 Practical training - 3 hours per week per semester
 Self organised studies - 67 hours

Teaching Materials and Literature

Material provided by the Chair

Module Examination

Continuous Assessment (MCA)

Assessment Mode for Module Examination

- Written examination, 80 min. (50%)
- Written essay, 8-10 pages (30%)
- Short report about results of the microscopic analyses (20%)

Excursion participation is mandatory.

Evaluation of Module Examination

Performance Verification – graded

| Frequency of Offer | Every winter semester |
| Credits | 6 |
| Learning Outcome | At the end of the module the student are able to understand the basic processes of process engineering in waste water sludge treatment. |
| Contents | <p>Anthropogenic pollutants:</p> <ul style="list-style-type: none"> • Pollutants - kinds, environmental an health effects, pollutants transport/natural degradation <p>Sewage treatment:</p> <ul style="list-style-type: none"> • History of sewage treatment <p>Methods in sewage treatment:</p> <ul style="list-style-type: none"> • Sedimentation, flotation, sieving and filtration, chemical treatment (neutralization, flocculation and precipitation, oxidation and reduction processes, electrochemical processes), biological processes (aerobic and anaerobic biodegradation, biological nitrogen and phosphorus elimination) <p>Technologies in sewage treatment:</p> <ul style="list-style-type: none"> • Coarse cleaning by screens and rakes, micro-sieving, sedimentation processes: Grid chamber, preliminary sedimentation and secondary settling, flotation processes: Oil and fat trapping, light density material collector, flocculation filtration, biological sewage treatment: The activated sludge process, fixed bed reactors, treatment plant design, combined technologies in industrial water treatment, • Sewage sludge treatment, thickener, sludge conditioning, sludge dewatering, sludge recycling, land application, composting, innovative technologies for sludge reuse |

|---|--|
| Recommended Prerequisites | none |
| Mandatory Prerequisites | none |
| Forms of Teaching and Proportion | Lecture - 2 hours per week per semester Tutorial - 2 hours per week per semester Self organised studies - 120 hours |
| Teaching Materials and Literature | <ul style="list-style-type: none"> • Wastewater Treatment. Biological and Chemical Process: Biological and Chemical Processes (Environmental Engineering), Mogens Henze (Autor), Poul Harremoës (Autor), Jes LaCour Jansen (Autor), Springer Verlag 2002 • Biological Wastewater Treatment, Second Edition, Revised and Expanded, C. P. Leslie, JR. Grady, Glen T. Daigger, und Henry C., Marcel Dekker Ltd , 1999 |
| Module Examination | Final Module Examination (MAP) |
| Assessment Mode for Module Examination | Written examination, 120 min. |
| Evaluation of Module Examination | Performance Verification – graded |
| Limited Number of Participants | none |
| Remarks | none |
| Module Components | <p>Winter semester:</p> <ul style="list-style-type: none"> • 230506 Lecture Waste water and sludge treatment • 230500 Examination Waste water and sludge treatment • 230544 Examination Waste water and sludge treatment <p>Summer semester:</p> <ul style="list-style-type: none"> • 230544 Examination Waste water and sludge treatment |
| Components to be offered in the Current Semester | 230544 Examination Waste water and sludge treatment |

Erläuterungen

Das Modulhandbuch bildet als Teil der Prüfungsordnung die Rechtsgrundlage für ein ordnungsgemäßes Studium. Darüber hinaus soll es jedoch auch Orientierung bei der Gestaltung des Studiums geben.

Dieses Modulhandbuch wurde am 19. März 2026 automatisch für den Master (universitär)-Studiengang Environmental and Resource Management (universitäres Profil), PO-Version 2021, aus dem Prüfungsverwaltungssystem auf Basis der Prüfungsordnung generiert. Es enthält alle zugeordneten Module einschließlich der ausführlichen Modulbeschreibungen mit Stand vom 19. März 2026. Neben der Zusammensetzung aller Veranstaltungen zu einem Modul wird zusätzlich das Veranstaltungsangebot für das jeweils aktuelle Semester gemäß dem Verzeichnis der BTU ausgegeben.

The module catalogue is part of the examination regulation and as such establishes the legal basis for studies according to the rules. Furthermore, it should also give orientation for the organisation of the studies.

This module catalogue was generated automatically by the examination administration system on the base of the examination regulation on the 19 March 2026, for the Master (universitär) of Environmental and Resource Management (research-oriented profile). The examination version is the 2021, Catalogue contains all allocated modules including the detailed module descriptions from 19 March 2026. Apart from the composition of all components of a module, the list of lectures, seminars and events for the current semester according to the catalogue of lectures of the BTU is displayed.
